Aw, well maybe I just didn't notice since I took the General,
Advanced and Extra writtens at the same setting.

Thanks Bill. The references Jim posted were just the sort of thing I was asking Val to post. With a reference back to the original, I (and all others in netland) can read it for ourselves, and decide the proper context. If Val had done that he would have been a lot more credible.

Thanks and 73's,

Robert / N4IXT

Why, *OF COURSE*!! He did exactly what you wanted, so he's perfect in
every way! Of course it didn't hurt at all that he knew where PC is, in
that he didn't dare offend such a horde of "victims".

{{remaining ton and a half of BS properly disposed of}}

So why do insist on trying to do so all your life??

> > Is she coherent?
>
> Nope, my point exactly. Everyone cannot become an amateur radio operator.

Gee, check with NCI, maybe they'll back a testing waiver for people who
are out of it but whose relatives feel should have a ham radio license.

So there was only one class of license at the time Mr. Segal penned it?

> > Is she coherent?
>
> Nope, my point exactly. Everyone cannot become an amateur radio operator.

I believe I stated that it was never intended for all to become radio
amateurs. I believe the incoherent have always been left out. Perhaps
you can start a movement to have them included.

>pay to put the NCI threat, the LONG RUN threat, to sleep,
>hopefully for GOOD!

Val:

You're in the right section, but sitting in the wrong seat. I have
very strong doubts that the ARRL sees the NCI as any kind of
threat as a "competing organization." You see, NCI is just a small
group of hams who write letters to the FCC; it is not a national
organization with hundreds of thousands of members, in spite of
the member "numbers" you're seeing. There are probably at most
a couple of dozen actual NCI members.

What the ARRL is concerned about is the dismal growth record
of the ARS of late, and the fact that if more people don't become
hams, there won't be a source of prospective ARRL members, and
thus, their membership will decline and the League, already in
financial difficulty, will face extinction. Follow the money, and
you will learn the truth.

The ARRL had to ditch any notion of supporting the status quo
in code testing because they knew they can attract more potential
members with a dumbed-down, free-for-all type of licensing
structure, than one with any practical, meaningful standards.

Cecil:

Not much, because from all the evidence I've heard, the language used
on HF phone would never be tolerated on HF CW.

>If the content of the QSOs are the same,

Trust me, it isn't!

>why does the
>mode matter as long as the message gets through?

Well, in a wider variety of cases, the message *will* get through on CW
when it won't on SSB, and thank goodness for that!

>The 40m Novice
>band is presently more like the 40m phone band, filled with
>foreign commercial AM stations. However, since I got my IC-756pro,
>I am finding lots of space between those interfering stations.

Well, I find the same space with my 1987-vintage IC-735.

Sooooo -- You're using an off-the-shelf "appliance" instead of home-
brewing your own multi-band, multi-mode, DSP software-defined
DC-to-Daylight transceiver, using chips produced with your own
two hands right in your basement "clean room" and software you
coded on your palm pilot during your last visit to the bathroom?
What are you -- some knuckle-dragging CW user, or what?
Better not let Lennie Anderson catch you! After all, all the new No-code
soon to be Zero WPM Generals and Extras will be able to do that
in their sleep!

Every so often a guy like Randy comes up with the mistaken idea of placing restrictions on the wide availability of amateur radio equipment and supplies. These are the folks who suggest it be a crime to own amateur equipment without a license, and who are not thrilled about the fact that Radio Shack sells a line of UHF/VHF amateur equipment right out under the nose of the impressionable public. I suspect they don't like the idea that soldering guns and schematics are openly sold to those without the proper credentials also.

While it is easy, on the surface, to agree with their goal (keeping amateur equipment out of the hands of bootleggers), I feel the attitude that amateur equipment should be treated as some sort of controlled substance is short-sighted and in fact damaging to our service.

I live in a large metropolitan area. We have one full line amateur store in town. There are no other similar stores in the whole state. In the four states which border us, there are 2 more amateur radio stores. THAT'S IT! In 5 states, there are only 3 stores! In the whole country, my guess is that there are less than four dozen stores selling amateur radio equipment, antennas, and supplies! It is as though we were some secret society, bent on concealing our presence from the world.

Not all that many years ago, there were at least 6 electronic stores here in town which sold amateur equipment (not exclusively, but they all had a good selection). Add to that two Heathkit stores, and even the Sears stores sold amateur transceivers for awhile. (Yes, Virginia, right there along with the Craftsman sockets and Silvertone TV sets.) In the same era, Radio Row in NYC was blocks of wall-to-wall storefronts catering to electronics experimenters. Popular Science magazine had a regular column about amateur radio, and occasional construction articles. Every second little town had an amateur radio club. Amateur Radio was a populist, Joe SixPack kind of hobby.

During those years it was easy for a person to get interested in being an amateur, to shop around for the best

deal on equipment, and to meet an Elmer. We were visible to the public, and well regarded.

Then somewhere along the line came the magic of 1-800 shopping, amateur radio marketing became streamlined, and radio stores disappeared from Hometown America. With the demise of the local radio store, all the Elmers disappeared into their shacks and newcomers flounder around in fancy four-color ads in back of CQ and QST magazine, trying to decide how to be a ham. Clubs floundered, in part due to the loss of hams around the coffee pot in the back of the local electronics part store.

Rather than continuing to restrict the availability of amateur equipment, as though we were selling assault weapons or recreational pharmaceuticals, I vote for opening up the market. Let's have radios for sale in the strip malls alongside the video games, Lionel trains, and mountain bikes. And it won't hurt if a few of us put on our Elmer-suits and lurk around to spot the likely recruits.

When they outlaw ham gear, only outlaws will be hams.

Carl R. Stevenson wrote, after I asked,

>> So, when is NCI officially disbanding?

the following . . .

>When there is no longer a mandatory Morse test for
>any class of Amateur license anywhere in the world.

One always has to admire ambition! But anyway,
when code testing goes away here that will be the
end of your agitating in the U.S., right? I mean,
when the F.C.C. ends code testing in the Land of the
Free then we can assume you'll be trying to call in
airstrikes only in FOREIGN countries, and we won't be
hearing from you anymore on U.S. ham-related issues.
Would that be a fair statement?

Val

P.S. Does Iraq have the code test? We could kill
two birds with one stone there, pretty shortly, by
sicking you and your friends on old Saddam, couldn't
we? Yeah, the NCI Air Force would no doubt reduce
him in seconds, and CNN would be there to record
you writing "NCI" on some of your ordinance! My, my,
how the WORLD would TREMBLE!

That's a fair statement as regards NCI. That's
not at all something you can expect from me as
an individual.

If you think otherwise, please explain why you'd
expect me, an indivdiual, to not voice my opinion
on other ham issues.

>When I was first licensed (WN2CJV
>in 1962), novices had voice privileges in the 2 meter band. I suspect
>the ARRL was trying to get more activity up there.

Novices had 2 meter privileges from the very beginning of that license (1951) but lost voice (actually, AM only) privs in 1967.

The original reason/idea for the Novice was to provide a sort of "learner's permit" that would lead to a higher class license. The Tech was originally intended to be an experimenter's license, so it made sense for the Novice to have some VHF privs as a lead-in to the Tech, and some HF privs as a lead-in to the General and higher classes.

> A gentleman had
>built (around 1964) a 1 tube transceiver for 440 MHz - problem was, he
>had no one to talk to - even if it had a lot more than its' 1/2 to 1
>mile alleged range!

There was a single tube 440 transceiver in the late-60s ARRL Handbooks - used a single 6CW4 and a couple of transistors in the audio section. A far cry from a
modern HT!

> Now, novices and coded techs can use 10 meters. I
>wonder why?

The original idea was to counter incursion by freebanders in the late '70s and early '80s.

>International agreements prohibit amateur operation below
>30 MHz without some CW. Exactly what that means, I'll leave to the
>more knowlegeable folks around here.

There's an ITU treaty section that says, in effect, that all hams whose licenses
allow operation below 30 MHz must pass code tests. The USA abides by this treaty, and the FCC sez that because of that treaty section (S25.5), code tests are still needed. FCC also sez that treaty requirement is the one and only reason we still have the 5 wpm code test.

>ments'. Lot of difference there.

I've read your histories, the most recent one and one you put
on some time ago, and should have qualified my message
this morning in this area. That's what happens when you get
in a hurry on a Sunday morning before church. I should have
prayed a little more over it! The FCC's code position certainly
was a slide, not totally precipitous.

[About "no regulatory purpose being WRONG!]

>I agree. But the FCC doesn't, and they make the rules.
>The mere fact that FCC does something doesn't make
>it "right", of course, but it does make it legal.

This is all quite fascinating, about the FCC. It seems to
be like some kind of Black Box, a mystery wrapped in an
enigma, it's actions unfathomable. However, I cannot help
but assume that it's just like other government agencies,
and under constant bombardment by those with axes to
grind, including particpants in amateur radio. That is,
when I read "The FCC did this out of the blue," well,
I refuse to give it much credence. That is, it may have
been out of the blue for SOME folks, but, er, ah, for
others it sure as heck likely was not! Who do you see
as the primary influencers of the agency over time,
vis-a-vis the ARS? There's a major article here, for
a magazine that does not currently exist in amateur
radio. That is, I don't think QST would run any historical
piece that really delved into ALL the possibilities.

[About code and "international understanding"]

>Sounds good to me - but the FCC doesn't buy it. Nor
>any other procodetest reason other than "gotta satisfy
>the treaty".

Do you have any thoughts on WHY this came about? That
is, why the desire to get rid of ALL of it, in spite of it's long
history in the ARS and its demonstrated usefullness? It
seems like cutting off your nose to spite your face.

[To my comments on Ham Radio's "Top Ten]

>Ed's list, as I read it, says that code TESTING is not in
>the Top Ten. Just his opinion, anyway. But note that FCC
>received comments on code testing from less than one
>half of one percent of US hams, even though the comment
>period was longer than usual and comments could be filed
>online. Such a small turnout indicates that, indeed, most
>interested individuals don't really care very much about
>code testing, one way or another.

Could be. Or, it could be that they thought the ARRL
was actually interested in preserving the test, right up
until the wheelchair went into the water! That is, if you
think your interests are being protected by the people
who seem to be saying that they're protecting them, well,
that helps keep you in your chair. Somehow, this whole
affair has the air of the "sandbag"! See below my
thoughts about why no "Pro-Code" grass-roots group
ever appeared.

[NCI as a threat to ARRL]

>I don't think so. ARRL's position did not change
>significantly from the initial proposal. FCC simply
>decided not to go along.

I'm really sorry, but this last just won't do. It's a bit like
the old New Yorker cartoon about the scientist with the
blackboard full of equations, and the "solution" down
in the lower right-hand corner. But over in the lower
left-hand corner, in tiny print, was the legend, "then a
miracle happens," in between two crucial expressions.
Why, why, why did the FCC "not go along?"

[More on NCI.]

>No-Code-International has a total historic membership
>of perhaps 3400 individuals, worldwide. Membership
>numbers are sequential and started with #1001, and
>there are no dues and noexpiration date on membership.

Well, yes. BUT, they got a seat at the table, didn't they,
and from even smaller acorns mighty oaks have grown.

The bureaucrat's REAL job is to stomp the potential opposition, or find a way to neutralize it, BEFORE it gets to truly amount to something. Code testing may have had to go because it had become the "bete noire" of a group with the potential to unite a large group of currently un-politicized amateurs. You may think this idea nonsense but I do not, based on many conversations with local hams, over several years.

[About the "stab in the back" over code testing.]

>I'm not sure what you mean. Neither organization changed
>their position when it mattered.

Well, gee, they wouldn't, would they? However, it appears to me that at the very least the ARRL top leadership simply didn't care enough about the code issue to put up any real fight. Oh, sure, they had an official "position," but, hey, Mr. Hare's messages say volumes about what that piece of paper actually meant. And, the ARRL's tepid "defense" of code, behind a seeming "strong statement," could well have shut off any really effective grass-root organizing FOR the code test. If it's true that a handful of people raised enough stink to kill code testing, well, it's sure enough likely that as many people organized to DEFEND it, could have stalemated NCI! But, heck, the code was seen to have the ARRL behind it! Surely, that would be enough to stop the avalanche! Oopsies!

[About an ARRL/NCI "deal" over code.]

>Sounds like wild speculation to me, Val.

Yes, it is speculation, and maybe it's "wild." But have you read today's newspaper? Or yesterday's? Today's "wild speculation" is too often the day after tomorrow's old news! When something about a situation smells bad, it's usually time to start "speculating."

>What I think has happened is this: FCC has made it
>abundantly clear that they want the code test to just go
>away, for all sorts of reasons. They did not reach this
>position quickly or because of any single group. Rather,
>it has developed slowly but steadily for 27+ years. And
>the USA is not the only country going this way.

Gee, I'm sorry, but this smacks of a "then a miracle happened" kind of statement. WHY did the FCC move this way? And WHY was there no effective resistance to their attitude, when, with the VE's doing the testing, what did the FCC care about what test was actuallly given? What was the skin off their nose? Who was pushing from behind he scences? Or, maybe, the FCC was consulting Quiga boards for it's positions?

>The ARRL leadership is thus faced with the choice of sup-
>porting a code test position that has no real chance of suc-
>cess, OR, taking a neutral stance and focusing its resources
>on other issues. The ARRL BoD chose the latter route a
>ittle over a year ago. Has there been massive outcry from
>the membership? Not that I know of.

Well, by a year ago, er, ah, the die was cast, I think. The time
for a defense had just about passed by then! No, there's
something missing from this picture; something does not add
up. And, in the end, if the whole avocation is in danger of
going down by the stern, well, mistakes are being made by
the bucketfull.

[About people unhappy with the ARRL.]

>Those "unhappy with the ARRL" have a whole laundry list
>of reasons. Some are still mad about "incentive licensing",
>even though it was the FCC's idea, not ARRL's. Many
>don't understand what the ARRL actually does, or why a
>national organization is needed in the first place. Some
>are mad about the code test issue - on both sides of the
>fence. Lots of other stuff. A real challenge to balance all
>the diverse interests.

No doubt that's true. However, a little honesty might have
gone a long way where this issue is concerned. Leaders
have to lead and if they refuse to do that, for whatever reason,
and then blame the rank and file later for their inactivity, well,
it looks pretty cheap.

>Will NCI up and disappear if/when code testing goes away?
>We'll just have to wait and see.

If they are as trivial as you say, it doesn't matter what they do
from here on out. They are just about as much "past history"
as the code test. This last, I think, will be EASY for me to live
with! Fair thee well in the Underworld, NCI!

Val

it seems Bill thinks this ain't no big deal... Think again.......

see below.

==========

Date: Sun, 31 Mar 2002 20:31:46 -0800
From: Bill Pasternak <newsline@ix.netcom.com>
Subject: Re: Your Article on AR Newsline #1285
X-Sender: newsline@popd.ix.netcom.com
To: chuck K8CPA <k8cpa@arrl.net>
X-Mailer: QUALCOMM Windows Eudora Light Version 3.0.6 (32)

1: I re-read your note. What rec.radio.cb? ARNewsline is only posted
on
the Internet to http://www.arnewsline.org. (We do not involve
ourselves
with these useless internet discussions because they are based on
nothing
more than inuendo, lies and personal assaults. I don't think they
serve any
real purpose other than permitting people to vent hatred and there is
just
far to much of it in the world. Read the front page of your local
newspaper if you do not believe me.)

2: S1nce we never asked you to post a "rebuttal" and we have no
reason to
ask you to retract it. As long as you did not change the content of
our
material and did not slander either myself or ARNewsline Inc., you are
free
to make any comment you like. (If its on one of thise newsgroups you
reffered to -- well -- have fun.)

3: We will be happy to share with you material -- but only as time
permits.
Besides, every bit of it -- and I do mean e-v-e-r-y bit of it is and
long
has been in the public domain. Our sources go back to the late 1950's
and
through the 1960's, 1970's and 1980's. Which leads to:

4: In reality, it is nothing that has not been published and
republished in

such venerable vehicles as the old Westlink Report, CQ Magazine, 73
Magazine (neither of which were/are anti CB) and a great, great deal
in CB
Radio News (1957 - 1979)and CB Magazine. The latter two had nothing at
all
to do with Amateur Radio and were very, very viruently anti-ham radio.
Probably the reason that neither is being published any longer. Do
you
remember either of these two -- or Wayne Green at 73 taking on the
Communications Attorney Service Inc. and its 300,000 subscribers who
each
paid $50 a piece to a con artist? Or CB Radio Times taking on the CB
Leagal Service which boasted 50,000 subscribers in 1976? Probably
not.

Last comment. Maybe you should not bother listening into Part 2 next
week
and Part 3 the following week.

de
Bill P.

rec.radio.cb is a internet usenet newsgroup. for someone who CLAIMS to
be
quite aquainted with the internet, you sure are in the dark alot. and
another thing, where'd you learn how to type?

As you see, Bill, I just insulted you twice in the last sentance, this
is

what this article was to most CB'ers, an insult, You're basically slapping
all CB'ers in the face and saying the Amateur Radio Service is better than
CB Radio. and futher more, you're trying to whitewash the service and make
like the Amateur service is better. Which it isn't, The Amateur Radio
Service has it's problems too, K1MAN for instance, 14.313, 75 meters,
14.275, the list goes on and on.....

>2: S1nce we never asked you to post a "rebuttal" and we have no reason to

>material and did not slander either myself or ARNewsline Inc., you are free
>to make any comment you like. (If its on one of thise newsgroups you
>reffered to -- well -- have fun.)
>

Your right, you didn't ask me for anything, I personally took ISSUE with
YOUR SLANDERIOUS COMMENTS towards a radio service that I use on occasion, I
took issue with YOU slapping the faces of every CB'er in the world, by
indirectly calling them Law-Breakers, Stupid, and basically trying to run
the CB Radio Service into th ground, to make the Amateur Radio Service look
good. Which is in face a LIE. the Amateur Radio Service has it's self, in
face does have problems.

>3: We will be happy to share with you material -- but only as time permits.
> Besides, every bit of it -- and I do mean e-v-e-r-y bit of it is and long
>has been in the public domain. Our sources go back to the late 1950's and
>through the 1960's, 1970's and 1980's. Which leads to:
>

So in other words, We'll get it too you, when WE feel like WE have the
time, sounds to me like I'll never see anything from you. I think your
trying to weasel out of providing me SOLID facts as to your story.

>4: In reality, it is nothing that has not been published and republished in
>such venerable vehicles as the old Westlink Report, CQ Magazine, 73
>Magazine (neither of which were/are anti CB) and a great, great deal in CB
>Radio News (1957 - 1979)and CB Magazine. The latter two had nothing at all
>to do with Amateur Radio and were very, very viruently anti-ham radio.
>Probably the reason that neither is being published any longer. Do you
>remember either of these two -- or Wayne Green at 73 taking on the
>Communications Attorney Service Inc. and its 300,000 subscribers who each
>paid $50 a piece to a con artist? Or CB Radio Times taking on the CB
>Leagal Service which boasted 50,000 subscribers in 1976? Probably not.
>

And I answer that with.... You ever read the announcements in QTH
Classifieds??? You ever hear of the scams pulled on E-Bay? BY HAMS TO
Other
HAMS??? My point???? Amateur Radio operators ARE NOT these perfect
little
people, who never do ANYTHING wrong... and yes, I remember all that
stuff,
my father was a active CB'er in the 1970's, I have copies of the CB
magazine and CB Radio News.

>Last comment. Maybe you should not bother listening into Part 2 next week
>and Part 3 the following week.
>

Oh! Not only am I going to listen to it... But I will comment on it,
and
If I hear anything that I do not like, I will be posting a rebuttal
to it
on my website and in the newsgroups as I see fit.

I don't know the answer as 1928 was before my time. Perhaps Jim can answer
that question.

> I believe I stated that it was never intended for all to become radio
> amateurs. I believe the incoherent have always been left out. Perhaps

The argument is over the statement, "Anyone can get a ham license." That
is simply not a true statement.

If Ham Radio is in decline then EVERYTHING is a potential
threat, including a stinkbomb like NCI, at least in my view.

>You see, NCI is just a small group of hams who write letters
>to the FCC; it is not a national organization with hundreds of
>thousands of members, in spite of the member "numbers"
>you're seeing. There are probably at most a couple of dozen
>actual NCI members.

I am sure that you are very close here BUT, in certain
situations, and Ham Radio now seems to be shaking
in its boots, a very few people can have a disproportionate
effect, particularly on the erstwhile "leadership" of a group.
I don't think it's NCI itself, it's the fact that ANY organization
at ALL has to be neutralized, given the status what am quo.

>What the ARRL is concerned about is the dismal growth
>record of the ARS of late, and the fact that if more people
>don't become hams, there won't be a source of prospective
>ARRL members, and thus, their membership will decline
>and the League, already in financial difficulty, will face
>extinction. Follow the money, and you will learn the truth.

Well, yes, if this is true then a panicked group of leaders
can very well make mistake after mistake after mistake.
Nothing causes sweaty palms quite like red ink.

>The ARRL had to ditch any notion of supporting the
>status quo in code testing because they knew they can
>attract more potential members with a dumbed-down,
>free-for-all type of licensing structure, than one with
>any practical, meaningful standards.

This would go under the rubric of "pounding the rubble"
and unfortunately does not bode well for long-term
success. It things really are as you say then some kind
of renewal MUST begin soon, so as to insure that the
incoming raw material really DOES advance in the radio

arts, SOMEHOW, so as to hold their interest. What do we know about retention of new Technicians, by age group? I guess those stats are just now starting to come in, would that be right?

Val

Spock went into heat on TV. The mind meld with Dr. McCoy spanned
two movies, Star Trek IV (Wrath of Khan) and Star Trek V (Search
for Spock).

What you do I notice, all right. YOU insist on a pecking order as
though there was no alternative. If it doesn't exist on its own you'll
invent it.

You see discontent over the degeneration of the ARS as evidence of a
pecking order, just because you WANT it to be that way. You should be
joining in the effort to build up the ARS, but instead insist on shoving
it even further toward being a (barely) licensed clone of CB.

In your individial opinion, but of course you erroneously choose to expand the subject far beyond the ARS to encompass the whole world, most of which doesn't know ham radio even exists. In ham radio CW is still secondary only to voice in use on the air, and there is a LOT of CW activity on the air. That alone gives the lie to your assertion as it applies to ham radio. It IS important.

All that shows is that ham radio is out of touch with the times.
How can you possibly use CW to "contribute to the advancement of
the radio art"?

As always, you twist reality to fit your Agenda. contributing to the
state of the art is only ONE of a number of several of the basis and
purposes of the Service. To say that anyone who supports and uses CW is
out of touch with the times, despite much evidence to the contrary,
shows your true intent, and that is merely to quash CW supporters.
The more you post the more phony you prove yourself to be.

Jim doesn't need to answer it. The answer is that there was more than
one class of license at that time. That'll save you the trouble of
actually looking it up. Since Paul Segal didn't set up the Amateur
Radio Service, you can save your ire for government.

We've been here before. Don't leave out the dead. Become an advocate
for the rights of the dead and the incoherent. When someone says
something like, "Anyone can get a ham license" the individual does not
refer to people who are comatose, the illiterate, the deceased or your
91 year-old aunt. When someone says, "Anyone can become a Boy Scout",
it is understood by anyone with half a brain that he doesn't mean, those
who are 70 year-old men or those who are girls.

Did you see the pecking order as the basic cause of degeneration of Intel? There has been a "pecking order" in amateur radio for much of the time the service has existed. There is a pecking order in many of life's endeavors. There is a veritable free market of pecking.

You really need to find something to do with your time. You've gotten your pecking order tangled up with your picking order.

>others it sure as heck likely was not! Who do you see
>as the primary influencers of the agency over time,
>vis-a-vis the ARS?

There is no one major influence. Instead, there are many influences, both internal and external. For example, just in the case of the ARS, FCC has at least the following influences (in no particular order):

- ARRL
- other ARS organizations, including but not limited to NCI (NCVEC, W5YI group, etc.
- other radio services asking for spectrum allocated to the ARS
- electronic industry manufacturers
- Congressional and White House mandates to simplify regulations and make other changes
- interested individuals sending in letters, emails and proposals
- budget cuts and limitations
- complaints of interference and rules violations
- changes in FCC personnel
- changes in technology inside and outside the ARS
- changes in growth of the ARS
- demographic changes in the ARS
- trends elsewhere in the world

For example, up until the end of 1997 the maritime services of all nations were required to have Morse capability on all ships over a certain size. This created a demand for commercial radiotelegraph operators, both on the ships and at shore stations. While not all of these ops are/were hams, there was a definite synergy between the two services' operators. But once the Morse capability requirement was removed, the need for those operators evaporated. One less reason for hams to have mandatory code testing.

>There's a major article here, for
>a magazine that does not currently exist in amateur

>Why, why, why did the FCC "not go along?"

Simple - their opinion of code testing has changed over time. The FCC of 1999,
which wrote the restructuring R&O, is very different from the FCC of, say, 1965
which wrote the restructuring that came to be known as "incentive licensing".

What "seat at the table"? They presented a position, just like ARRL.
They did an ex-parte presentation, just like ARRL. Were any rules
broken? Not that I know of.

Would you have had the FCC turn them away at the door? I wouldn't, even though
I oppose practically all of their positions.

>The bureaucrat's REAL job is to stomp the potential

>conversations with local hams, over several years.

NCI has existed perhaps 5 years and has only about 3400
members, all united by a single goal. Hardly a threat to the
ARRL.

There have been several alternative organizations over the years,
and all of them have gone by the wayside because they could not
enlist broadbased support.

It must be remembered, too, that the ARRL is not a monolithic organization
whose members and directors all agree. The ARRL Directors' opinions on code
testing range all over the map, from "ignore the treaty, end it NOW!" to "the
way
it was in 1990 is the way it should still be". The ARRL proposal was, of
necessity, a compromise.

Ed Hare does not make policy, the Directors do.

> And, the ARRL's tepid
>"defense" of code, behind a seeming "strong statement,"
>could well have shut off any really effective grass-root
>organizing FOR the code test.

Sure. But recall that the FCC is not bound to follow any particular opinion.

> If it's true that a handful of
>people raised enough stink to kill code testing, well, it's
>sure enough likely that as many people organized to
>DEFEND it, could have stalemated NCI! But, heck, the
>code was seen to have the ARRL behind it! Surely, that
>would be enough to stop the avalanche! Oopsies!

The FCC is not bound to follow majority opinion. They did not follow the majority of comments on code testing. Would a bigger majority have helped? Maybe, but there's no way to tell. It is quite possible that FCC would have ruled the same in the face of overwhelming support of code testing.

It will be interesting to see what happens with the "refarming" proposal.
>
>[About an ARRL/NCI "deal" over code.]
>
>>Sounds like wild speculation to me, Val.
>
>Yes, it is speculation, and maybe it's "wild." But have you
>read today's newspaper? Or yesterday's? Today's "wild
>speculation" is too often the day after tomorrow's old news!
>When something about a situation smells bad, it's usually
>time to start "speculating."

I know that most speculations turn out to be false, too.

Consider the following: At the most recent IARU Region 3 meeting, the member societies reps' had a vote about eliminating the treaty provision requiring code testing. (Of course such a vote does not change the treaty, it just shows their opinions). ALL of the societies except the ARRL voted to abolish the requirement.
Was NCI there? Nope.
>
>>What I think has happened is this: FCC has made it
>>abundantly clear that they want the code test to just go

See above.

> And
>WHY was there no effective resistance to their attitude, when,
>with the VE's doing the testing, what did the FCC care about
>what test was actuallly given? What was the skin off their nose?
>Who was pushing from behind he scences? Or, maybe, the
>FCC was consulting Quiga boards for it's positions?

Here's one possibility:

FCC has been plagued for years by "freebanders" - illegal stations, mostly in
the
HF range, who simply ignore the rules and go on the air. CB is a quagmire of
users whose respect for the rules varies from some to none.

Ask any of these folks why they're not hams and one of the prime reasons is
"the
code test". By making it easier to get a license and eliminating the code test,
FCC
may hope to reduce freebanding and its associated problems.

And that's just one reason.

>>The ARRL leadership is thus faced with the choice of sup-
>>porting a code test position that has no real chance of suc-
>>cess, OR, taking a neutral stance and focusing its resources
>>on other issues. The ARRL BoD chose the latter route a
>>ittle over a year ago. Has there been massive outcry from
>>the membership? Not that I know of.
>
>Well, by a year ago, er, ah, the die was cast, I think.

Actually more like two years ago.

In fact, way back in 1997 there was a poster here who predicted that the FCC
was about to announce a radical new system. Three classes of license, one 5
wpm code test. Said it was a done deal. Many of us were very skeptical,
'specially considering the 4-class NPRM that came out a few months later. But
it
turned out that poster was absolutely correct on all counts.

> The time
>for a defense had just about passed by then! No, there's
>something missing from this picture; something does not add
>up. And, in the end, if the whole avocation is in danger of
>going down by the stern, well, mistakes are being made by
>the bucketfull.

If my theory about FCC wanting to license freebanders and others is true, then
every time somebody says to the FCC "We'll be overrun by CBers!!" they are
actually supporting FCC's move.
>
>[About people unhappy with the ARRL.]
>

How was anyone dishonest?
>
>>Will NCI up and disappear if/when code testing goes away?
>>We'll just have to wait and see.
>
>If they are as trivial as you say, it doesn't matter what they do
>from here on out. They are just about as much "past history"
>as the code test. This last, I think, will be EASY for me to live
>with! Fair thee well in the Underworld, NCI!

I think the thing to focus on now is what the license structure should be
if/when S25.5 is gone and FCC removes the last vestige of code testing.

Well TIT I just had to respond before I left.I am very upset with your response. I had hopes that after are QSO on 2 Meter CB that you would invite me over for Coffee, or maybe even a couple of "Cold Ones" I dont mean Beer. Who knows maybe we could have kissed and made up. Anyway I will be listening on Channel 19 as I drive by your Trailer Park.

Actually, I think we're all breathing a collective sigh of relief at
your impending (however short-lived) departure from the newsgroups.
Have a good business trip. Maybe your ISP will go belly-up while
you're gone...

Oh... BTW.... I'm just a lurker who figured he'd pop in and disturb
the feces... Are you disturbed, ULX?

N2EY wrote, quite a lot of interesting material, most of
which deserves detailed comment. However, in the instant
case the crux of the matter is:

>If there's any driving purpose, I'd say it was the idea that all
>regulations have to constantly prove their need to exist.

Very good, I will accept this as a working hypothesis. Now,
if this has in fact been the case then I can only conclue that
no true defense has been made, since there seem to be cogent
and effective "proofs" available concerning the value of CW
both now and into the indefinite future. Certainly, code testing
could have been retained at the highest level, the Extra, a
most reasonable position that apparently was "suggested"
but not actually fought for, at least in my view. That is, the matter
seems to have been of such little moment to the ARRL (by
the admission of one of their own) that it appears they
got steamrollered by a double handful of people with the
R-A for the code. As for the reasons for this lack of effort,
some of them served up by people close to ARRL, I can only
remind them of the Biblical account of Esau, who sold his
birthright for something of very little value, and came to very
much rue the day.

Val

50. Re: My rebuttal to WA6ITF's SLAM of CB RADIO!

>WA6ITF's Newsline service took it upon themselves
>to TOTALLY SLAM CB Radio, I, K8CPA Chuck Will pick apart
>these BIASED, OPINIONATED, Comments and provide you with >REAL WORLD ANSWERS!

Actually, what transpires is a typical low-gene-pool, knee-jerk response
to a well balanced news item.

:A NEWSLINE FOLLOW-UP: A POLITICALLY DISORGANIZED 11 METER CLASS D
:SERVICE

Nothing new about this. 11 meter CB has had a handful of
"representitives" over the past 50 years that acomplished absolutely zip.

:A few weeks ago we reported that the FCC has refused to hear an appeal
:by an Illinois C-B operator convicted of Disorderly Conduct for
:interfering with a neighbors home entertainment electronics. In the
:days since that report first aired, it caused quite a stir on several
:Internet discussion groups. Everyone wants to know how a service that
:once boasted 3 out of every 5 Americans with radios in their cars could
:wind up where the local sheriff or policeman could take an operator off
:the air.

>This is because the F.C.C. (mind you, an governmental agency) >decided to
"wash it's hands"
>of this service, and turned over enforcement of this service, to the >local
police,
>because in thier words, "they didn't have the money nor the >resources"!
>is it the fault of the operators???? NO!

Actually, YES it is...If the operators on 11 meter CB WERE following the
rules, then there'd be no reason to complain, now would there?

Such rules do not exist for Amateur (or FRS, or GMRS, etc etc) because
they are not polluted by drunken, deviate, disorderly punks who make the CB
radio service absolutely untenable for any "legitimate" use.

:After a bit of research, the answer seemed pretty clear. In one word:
:Politics. Here is Amateur Radio Newsline's South East Bureau Chief
:David Black, KB4KCH, with part 1 of a multi part look at the strange
:political side of 11 meter C-B.

>And just who did this research? Some, Pin-headed Ham,
>who's got a axe to grind with CB? I bet it was...

As opposed to the "pin-heaaded ham" who created this thread?

:When it comes to having political representation, most communication
:groups are in good shape. Hams have the American Radio Relay League
:looking after their political well being. Broadcasters have the
:powerful National Association of Broadcasters. Cellular telephone
:companies have the CTIA. Even the General Mobile Radio Service, which
:shares frequencies with the Family Radio Service, has representation
:amid the Personal Radio Steering Group. So, what form of communications
:lacks representation? That would be 11 meter, Class D Citizens Band
:radio. What does CB have? This:

>There is one CB Radio group, you even admitted that yourself.
>there's even a CB Radio Newsgroup rec.radio.cb!
>Did you happen to anckowledge that, NO!

The subject is "organized representation". If you call the crap on
rec.radio.cb "organized", you have some serious perception problems.

Only a fool would try to suggest that r.r.cb is "organized representation".

:--
:Sound from 11 meter CB
:--

>And Poorly recorded Sound at that...
>What channel did you get that from, channel 19?

Who cares? They (CB channels) are ALL trashed. I recall only two real
"gentleman's agreements", and that was that 9 was for emergencies, and that SSB
would be relagated to 35 and up only.

Even though 9 is now codified as an "emergency channel", I dare anyone to
get immediate, useful help on it.

And if you try to use the top channels for (legal) SSB, good luck dodging
the hetrodynes.

:Give CB a listen, and you hear lots of people using a service without
:any structure or formalized representation. Some might even call it
:anarchy.

>Oh, bullcrap! If you think CB is so stinking horrible and Ham Radio is >so
damn wonderful,
>go LISTEN to 75 METERS or 14.313 or 14.275
>and tell me how damn organized Ham Radio is... Give me a BREAK >BILL!

Great...YOU can "point" to two or three specific frequencies...WE can
point to everything from 26.600 to 28.000mHz, and even THEN some.

The few "outlaw" operations on Amateur Radio pale in comparison to the
EVERYDAY operations on 11 meters.

:--
:More sound from 11 meters
:--
>More piss poorly recorded sound from the 11 meter band....

So what DOES sound good on 11 meters? Absoluely NOTHING.

:Ironically, CB's lack of political power--as well as its inability to
:defend against bureaucratic attack--is not due to shortage of people
:using the airwaves. Many believe that next to cellular telephones, the
:second largest selling piece of 2-way radio equipment in the 20th
:century has been the CB radio.

>Now this is true.....

Maybe 15 years ago.......

:During the gas crisis in the 1970s, many cars sported some sort of 11
:meter whip and a cheap CB radio under the dash. Low cost 11 meter
:radios by the millions were manufactured, imported and sold. The
:industry had hobby magazines and several newspaper style newsletters
:devoted to CB radio.

>That's because of the CB Craze that hit in the 1970's,
>CB was around alot longer than that.
>Truckers were using CB LONG BEFORE THAT!
>Again more BIASED OPINIONS of Ham's who have an Axe to grind!

What "axe to grind"...?!?! Not a single word of what was said there was
untrue.

:CB operators outnumbered hams by at least 20 to one. And they :outnumber
:GMRS users by 1000 to one.

>They Still do!

And it matters not a bit. CB radio long-ago lost it's utility and
functionality.

:But CB was not able to defend itself from outside pressures either back
:then or today. Why? Part of the reason goes back to CB'ers themselves
:in the 1970s and early 1980s. Most of them were not really interested
:in the service. It was just a utility. A way to help learn where to
:find the cheapest gasoline or avoid speed traps.

>Crazes Come and go, Just like anything else,
>Why slam a hobby to make YOURS LOOK GOOD???? Stupid!

Again, not a single word was untrue. MOST CB operators are not "radio
operators" in the sense that Hams are or that some 11 meter sideband operators
are. CB radio was merely a means-to-an-ends, and that was (and continues to
be...) going faster than the posted speed limit and avoiding law enforcement.

:The CB radio service lacked any real monetary commitment. Without that,
:there was no political commitment. And when fuel prices began to ease,
:many but not all 11 meter operators pulled their radios out of their
:cars--and put them in the attic.

>That's because NO ONE has stepped up to the plate
>and formed a political organization like the ARRL,
>Because Not EVERYONE HAS THE Money backing like the ARRL

>(AKA The Good ol' buddies club)

Oh...I see...Just because the "gud buddies" on 11 meters don't have the
gene pool or the desire to "organize", then everyone else who HAS organized for
thier particular interest is a "Good ol' buddies club"

>Why? Because most Cb'ers Are working class people like Me.
>and don't have the mega bucks, like some hams have...

Oh? Now you are lashing out at those Amateur Radio operators who have
taken advantage of thier rights as citizens and made something of themselves?

We are supposed to stay poor trailer trash like your 10-4 buddies?

:Then there were the few others, the die hard CB hobbyists. They treated
:CB channels 1 through 40 as a sort of ham radio-like hobby. Some
:operated illegally, but would take the chance just to make a DX contact.
:But they never organized. Why?

>Oh, give me a break! You guys have Absolutly NO CLUE what goes >on,
>on the CB Radio Bands! Why does it have be about organizations, >or Clubs?
>for your information, there are still to this day, CB Clubs around the >world!

Because organized groups like the ARRL are where things get done.
Obviously, with the exception of the "clubs" that promote illegal DX use of 11
meters or REACT which has all-but-abandoned 11 meters, there is no desire by
CBers to do anything except "key down" and "ratchet jaw".

>True, nothing to the extent of the ARRL... Why? again, like I said,
>most people don't have the time , nor the Money to invest in such a >matter,
>because, unlike the rich Hams of the world, CB is a working-mans >radio hobby!

Amateur Radio does not "require" any big investment in radio gear to enjoy
any more than a modest CB station. If you WANT to spend more, then the
manuacturers will certainly be glad to accomodate you...but that's YOUR call,
not someone elses.

:Different CB groups formed over the years. Many called themselves
:political messiahs of 11 meters. But many turned out to be bogus.

>Scam artists are in EVERY HOBBY! (Even HAM Radio! GASP!)
>Ever read about the SCAM ARTISTS ON E-BAY?????

Unfortunately they seem to be rampant on CB...remeber Rick Cooper?

:During the late 1970's and early 1980's, C-B radio scam artists were
:busy, trying to separate the 11 meter radio operator from his hard
:earned cash. As group after group appeared and then vanished, it
:became apparent to most using C-B that trusting anyone was too
:expensive. Now, more than 25 years later, trust in any C-B political
:organization seems little more than a remote possibility.

>Just like the scam artists on e-bay, trying to sell Ham Radio >Equipment
>to unsuspecting hams! Ask W8GG, Greg, A disabled Ham,
>who got screwed outta money on a deal on e-bay....

>My point? The Amateur Radio Service is just as bad as CB!

Screwed on eBay? You mean Amateur Radio operators are the ONLY people who get screwed on eBay? Methinks not! ! !

:And what about the legal C-B operators? Those dedicated to public
:service? That part of the story, next week.

>This I got to see!

I bet

Steve Robeson, LPN

What this fails to appreciate is the "victim mentality" so pervasive through No Code Land. You don't think all those code haters will be content to be left out of the Extra class license just because they can't do the code, do you?
That alone is reason enough, and more, for them to make darn sure that no code testing whatever survives. The proof is right here on the NG. Check out all the code bashers who have "upgraded" to Extra since restructuring. CAM and Carl are the poster boys.

There is no longer anything extra about the Extra class license.

Here are some numbers to think about. These are the number of unexpired
FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of March 31, 2002:

Novice - 39,009 (decrease of 10,320)
Tech - 238,210 (increase of 32,816)
Tech Plus - 81,626 (decrease of 47,234)
General - 138,924 (increase of 26,247)
Advanced - 85,906 (decrease of 13,876)
Extra - 99,479 (increase of 20,729)
Total - 683,154 (increase of 8,362)

>whiz years and years ago?

I agree, it seems like the FCC is picking on you,and are being completely
unfair, you should be awarded the EXTRA ASAP.
They give them away right now for alot less effort than you put out.
What you need to do is send the FCC your resume on your Military Experience
and demand that you be AWARDED the EXTRA.
THIS IS VERY UNFAIR TO ARE VETERANS.

Hello, all!

I'm now passing the QRZ tests for General and will
be turning to the code portion in earnest very soon,
pointing toward taking both General elements two
weeks from tonight. Vis-a-vis code, I am bascially
starting from ground zero, though I did begin (and
then stop) the process in 1998. In the interest of
National Defense I will be passing along my experi-
ences with this code business, no matter what the
result, succeed or fail. Stay tuned!

As for all this radio theory stuff, I just don't SEE it,
especially in MY case. Why, back in the late 1960s
I spent MONTHS at Fort Gordon (that's where the
Army Signal School [a REAL radio outfit] was located!).
I went though that program like Sherman did about a
century earlier, showing them southerners the way to go!
And just a few months later I was just about sole support
on the RT-505 radio -- for an entire BRIGADE in South
Vietnam! Men's lives depended on me!

All of this is precisely true!

Why should ** I ** have to pass ANY tests in this rinky-dink
"Hamby-Pamby" outfit, huh? Why not just GIVE me the
license, all the way up to EXTRA, because I was a radio
whiz years and years ago? Huh? And I'm a Veteran, love
my country, go to church every Sunday, am a Kiwanian, and
love my wife and daughter!

Whaaaaah! Whaaaah! I want my LICENSE -- NOW!

WHY am *** I *** having to EXERT myself, huh?

That is, all I want is to be treated FAIRLY!

Val

About 75,000 upgrades and only ~9,500 added licensed hams, in nearly
two years.
I imagine ARRL will go all out on their "Big Project" to make a last
ditch effort to find someone, somewhere to recruit. The future of the
ARS would seem to depend on it. I have doubts about their ability to
interest youth in ham radio these days. These days there is nothing
about radio that is seen as being all that interesting, what with
satellite TV, cell phones, and the Internet. They just can't see what's
the big deal about talking to someone on a radio.

If that doesn't tell the story of the restructuring, nothing could.
NOTHING short of the proverbial ham radio license boxed with your Post
Toasties will really "get the numbers up".

How so?

> How can you possibly use CW to "contribute to the advancement of
> the radio art"?

Lots of ways. For example, if a ham wants to try out a new circuit or antenna,
CW offers a way to do so with a minimum of equipment.

Of course. But the counterargument is that it's not the MODE but the TEST whose existence must be justified. Whether the value and characteristics of CW/Morse justify a test for the mode is really an opinion question when all is said and done. FCC's opinion on whether a test is needed has evolved from "Yes" to "No" over the years.

Defenses of the mode and the test were presented to the FCC in the form of comments and proposals surrounding 98-143. You can read them on the FCC website, and some (like mine) were posted here. Have you read them?

Did you comment to the FCC, Val?

> Certainly, code testing
> could have been retained at the highest level, the Extra, a
> most reasonable position that apparently was "suggested"
> but not actually fought for, at least in my view.

How does one "fight for" such a thing, besides filing comments and proposals, and doing ex parte presentations? (all of which were done in defense of code testing, btw).

> That is, the matter
> seems to have been of such little moment to the ARRL (by

The only double handful that matter in the decision are all at the FCC.
What could ARRL have done that was not done?

> As for the reasons for this lack of effort,
> some of them served up by people close to ARRL, I can only

I don't see any indication that the ARRL "sold out" in any way on the
code test when the restructuring was underway. The ARRL proposal was
for 0/5/12/12 wpm, which represented a compromise of the various director's
views and the ARRL membership input.

59. How hams pass test (ARRL Poll results)

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-01 18:08:54 UTC
From: "Carl R. Stevenson" <wa6vse-shack@fast.net>
Message-ID: <3ca8b7fe_2@news7.fast.net>
Source record: 39341

In an effort to debunk the myth that today's ham tests
are a simple matter of word associations, etc. and that
"nobody is really learning the material," I offer the
following results from an ARRL web survey:

Poll date: March 29, 2002
What method did you use to study for your written ham tests?

I tried to completely study and comprehend the material. 70.4 % (815)
I memorized the correct answers with little understanding. 4.4 % (51)
I used a combination of learning, memorizing and lucky guessing. 22.8 %
(264)
I have not yet taken an amateur exam. 2.3 % (27)
Total votes: 1157

Since the 3rd answer (combination) reflects the reality that
some of the material can ONLY be memorized (and, if you
don't know the answer, most people will try for a lucky guess),
it would seem that 70.4% + 22.8% = 93.2% of those responding
actually did work to learn the material, as opposed to "simply
memorizing answers with little understanding".

While "self-selecting" surveys are admittedly not purely "scientific,"
the overhweming minority of people (4.4%) who picked the answer
that the "dumbing down" folks suggest is the norm, rather than the
exception, would seem to blow huge gaping holes in their rants
about the tests.

Also, if the 2.3% of respondents who haven't yet taken an exam
were excluded, the percentage of "learners" to "memorizers"
would be slightly higher yet.

So much for the rubbish that the "dumbing down" crowd
bandies about ...

Dick, please read this posting over and over until it soaks in.
I did NOT say anyone who supports and uses CW is out of touch with the
times. Hams are free to support and use any mode they choose.

However, IMO anyone who supports a mandatory Morse code requirement
is out of touch with the times. CW has enough merits to stand on its
own within a hobby in a free country without a government sponsored
welfare program.

If you haven't noticed, human beings are evolving to the point that
if a pecking order is unnecessary, it is being discarded. We have
discarded racial pecking orders, sexual pecking orders, religious
pecking orders, etc. Don't you think it's time to discard the
unnecessary class-based pecking order in a hobby in a free country?

CW, the mode, has been admirably defended. Unfortunately, that defense has nothing to do with the mandatory Morse code testing. You continue to fail to comprehend the real issue. The discussion is not about CW, the mode. The discussion is about mandatory Morse code testing. The two issues are relatively unrelated. As long as you concentrate on the merits of CW, the mode, you are looking for your lost keys under the streetlight, where the light is better, rather than looking for them in the dark where you lost them.

The federal government has to be careful to ensure that federal
requirements are justifiable. If you were an FCC employee, what
argument would you use to justify a skill test within a hobby
for a mode that virtually all other radio services agree is
outdated and has been discarded? Take the 30,000 foot view,
like the FCC has to, and tell us what you see.

It is not unreasonable to ask someone to prove that they were indeed
a whiz years and years ago, have retained and updated that knowledge,
and have not gone senile in the meanwhile. Those things are proven by
meeting the Extra requirements.

Uh Oh, Val! You shouldn't have admitted that. From now
on, no matter how much you achieve in the Amateur Radio
Service, you will be forever branded a restructured dumbed-
down ham, lower than the lowest layer of whale dodo on the
bottom of the ocean. :-)

You have to be kidding, Right. The Extra proves nothing, other than you have an ability to memorize a bunch of Q@As that have no meaning to most people who take the Test.

material that deserves to be commented upon:

>How does one "fight for" such a thing, besides filing
>comments and proposals, and doing ex parte
>presentations? (all of which were done in defense
>of code testing, btw).

The fact that you even ask this question is now very
distrubing to me. That is, if you don't REALLY care
about something, yes, you LIMIT your activities to these
kinds of things. For instance, the ARRL is now cranking
up a campaign to go over the FCC's head where CC&Rs
are concerned. That is, they're doing a LOT more than
just filing paper, a WHOLE lot more! The FCC said,
"We're not going to give you what you want unless you
get the Congress to MAKE us do it." And THIS is in an
area that is VERY sensistive, and could be VERY
dangerous down the road, since it involves political
minefields where professional politicians usually fear
to tread. But, the ARRL is forging ahead, regardless!

Now, WHY are they doing more, on this and on several
other issues as well? Because on the CC&R issue they
flat LOST the paper process and, on these other issues,
they KNOW that if ALL they do is file comments and pro-
posals, and ex parte presentations, then, guess what,
they could very well LOSE there, too! So, since the
ARRL wants TO WIN in these areas, it's balls to the wall!
And as far as losing is concerned: been there, done that,
GOT the bleeping T-shirt! I mean, it's OBVIOUS, isn't it,
that true LEADERSHIP means going FAR beyond the
bureaucratic minimum? I think SO!

>What could ARRL have done that was not done?

See above.

>I don't see any indication that the ARRL "sold out" in any
>way on the code test when the restructuring was underway.
>The ARRL proposal was for 0/5/12/12 wpm, which repre-
>sented a compromise of the various director's
>views and the ARRL membership input.

Shall we say then that they made only the minimum effort
required in order to maintain appearances, and thus keep

the rank and file actually IN the ranks and files? That is,
ONE wildcat organization running around was one too
many! Another one, a "pro-code" one, was hardly in
anyone's interest. I think these comments are MUCH more
than "wild speculation" and are solidly validated by the facts.

Jim, please put yourself in the FCC's position at 30,000 feet looking down on the entire radio EM spectrum. What are the most important sections of that spectrum? How much of that spectrum uses CW? How in the world can the FCC justify a skill test in a hobby in a mode that virtually all other radio services have given up on? Hams are not likely to advert another Titanic tragedy using CW. Hams use CW for fun. Why should fun require a federally sponsored welfare program? How can such a program be justified by the FCC to their management?

The view from 30,000 feet is entirely different from the view from minus one inch with one's head buried in the sand. IMO, the hand-writing is on the wall. It is up to us hams, individually and collectively, to ensure the health of CW, the mode. The FCC is simply not interested in doing it any longer, for whatever reason.

Please don't forget the Morsely handicapped. If there are people who
can't learn 13wpm and 20wpm, then there probably are people who can't
learn 5wpm. For the record, I know people who can't learn 13wpm and 20wpm.
I am not personally aware of anyone who wants an amateur license who
cannot learn 5wpm but probability suggests that such persons exist
who are otherwise relatively normal. So I ask again: Why does your
agenda need to encourage false statements?

Opinions are like a$$holes - everyone has one. I'm willing to bet that 95%
of the general population cannot pass an Extra exam. Heck, probably 50%
of the coded ham population cannot pass an Extra exam. If they could,
don't you think they would have by now? If passing the Extra exam is
trivial, why aren't all hams Extra's? Inquiring minds want to know.

The following, written by a wise ham, is about 4-5 years old,
but it bears repeating here.

Enjoy

73, de Hans, K0HB

---Begin Forwarded message---

I am an Extra. I was proud of it. I had
a certificate on the wall issued by the FCC to prove it. Then
in 1968 along came incentive licensing. That was in a previous life,
because in 1968 I died and became a bigot. I thought that incentive
licensing was the final achievement, the culmination and triumph
of my being a better radio ham than lowly generals or conditionals.

I gloated with glee when the generals were kicked out of half of each
band. I gloated that I could now operate among my own peer group
on 14, 205. I even could gloat of my linear amplifier and my
102 ft tower that made my signal something to be reckoned with. I
won the CQ WW WPX contest (for Alaska) one year. Oh, man, I was
on top.

But in 1996, folks, the fellows from the local club came to me.
Ramon, help us out. You are an Extra. We need a VE. So I said
okay, I'll go see what these lowlifes are up to and put an end to
this nonsense.

But, it didn't work out that way. I was converted. I saw the light.
I saw that these guys weren't low lifers, they wanted to be HAMS.
I had to recognize that you can't really build the equivalent of
a TS-450. In the old days, CW was the state of the art, you mostly
built your gear. CW testing was appropriate. So I said to myself,
lets hold your tongue and see what these guys are up to. So the club
went on to create a whole new generation of radio hams. These guys
are good. They are polite, they say "roger" and not "10-4 good
buddy" They say "Is this frequency in use, or is anyone listening
on the repeater, instead of "breaker-breaker 19". In other words,
these guys CARED for ham radio, its traditions and its values. They
wanted to BELONG.

Okay, I said, lets go ahead and get the exams from the Anchorage VEC
and put them to the test. Sure enough, they got licensed and are
now on the air. Their calls are a giveaway, like WL7CSG, but by
golly, you couldn't tell them apart from a real ham otherwise. And
why can't you? Because they ARE real hams.

What about the code? Well, like homebuilding it has its time and place. Nowadays a TS-450 costs the same as an old DX-100, or BC-610 or some old time monstrosity. These guys want to get on the air and enjoy the hobby. Go moose hunting, fishing, picnicking and keeping in touch with the crew back in town or over the next hill. Sounds no different than me! Must be real hams. Many have expressed interest in HF. They know the code is a requirement. And they wonder why. They do not intend to use CW. Why take a morse test? The FCC does not give a public speaking test before they allow you to operate on 20 ssb. Why not? Because at the time the test was devised CW was the principal mode, phone was an oddity for experimenters, and the FCC tested in appropriate areas.

But somewhere along the line this principle became corrupted. It has become a symbol of elitism, bigotism, intolerance. And the saddest part is I am a CW man. I like being on 14,005. I like to chase CW DX. But browbeating some one else for what I like is not proper. No sir. Lets test what needs to be tested, and not test what does not need to be tested. Have no fear of the no coders, for they cannot intrude in the cw subbands unless they know the code.

Now if someone was proposing to do away with CW, or eliminate the separation of the various incompatible modes to the detriment of CW, then I think that by golly, I would deem that very prejudicial, elitist, or bigoted and LOUDLY would I protest. But the Code TEST is a different thing altogether. It bears no relationship to what goes on in the cw bands. We did not learn the code at the FCC office. We learned it at home or, in my case, at an old man that was my Elmer. When I took my code test for novice in 1959 I was qualified to operate CW. If there had been no use for CW, I think that with a bit different training I could have been competent to operate on 20 meters a.m. phone. But I was trained on CW. That was the core of amateur radio back then. AS a young child I ran wires all over the neighborhood and hooked up telegraph keys and sounders to other similarly minded kids homes. Lots of fun. But today, CW is not what the public expects of amateur radio. Times have changed. I have changed. I have seen the light.

And as for my Extra class license; all of a sudden I am not ashamed of it anymore, because a few months after my eyes were open I realized that was not a prejudiced s.o.b. upper-class-bigoted-elitist Extra. No sir. I was instead a VE, a teacher, a person around which people gathered to learn from. Sure, I am human, I love the attention and probably some praise, but my attitude about me being BETTER just vanished. Better is relative.

The cycle of life goes on forever. Babies are born, old men die. The torch passes on. The teenager that we are so sure just "doesn't have it" "or it was different in my day" soon enough becomes the daughter of my grandchild. Soon enough she is 28. I am an old man. Soon enough I will die. And I sure do not want people to think "thank god that old idiot died". No, I want them to say, "my teacher,

my Elmer died. I learned a lot from him. And when his time comes, and we as a hobby have evolved into maybe faster than light commo to the stars, using some exotic techniques and modes, the PRINCIPLE will still exist and carry on.

Do we make fun of Marconi because he implemented the coherer detector and the spark transmitter? (I do not say invented). Do we make fun because Sir Hiram Percy Maxim, W1AW, used a spark set? Of course not. In fact, those guys were brave souls at the cutting edge of technology. Think of it: the cutting edge of technology! Things have changed folks, lets get on the bandwagon.

1. Eliminate the code test.
2. Retain cw sub bands.
3. Eliminate incentive licensing.
4. Institute just two license classes. Entry level or apprentice, and full amateur with ALL privileges including the right to operate CW on the cw bands (if he learns how). This is not to create an elite crust, but to provide for an easy entry step.
5. Educate, and maybe test, our new hams in radio operating, ham traditions and values, on the air etiquette, radio lore, and maybe even the dreaded Order of the Wouff Hong! Or the Retisnitch.
6. Lets make each new ham someone we can be proud off, and say, "Hey, he is coming right along!"
7. Lets take over the ARRL from within and make it a society that all hams can be proud to belong to. Let them represent all hams, not just the members. Lets change the system from within. Lets get rid of the creators of incentive licensing.

And let us remember, that upon creation of the incentive licensing program, the Extra Class did not get ONE SINGLE kilocycle of spectrum space, or one single KC of phone band. No sir, what they did is took the existing generals and told them to get out of this portion of the band while us extras enjoy the new freedom from associating with the likes of you.

8. I am not sure yet, haven't made up my mind, but I think that this Vanity call sigh program is aptly named. Vanity. The FCC has always issued call signs in sequential blocks. Started with 1AA in 1922, then W1AA in '27 and now they are up to KD4 or some such. And hams dearly love their calls. Mine is shorter than yours because (insert your favorite excuse here). I am starting to think that this vanity call sign is somehow...smelly. What if the FCC made ALL ham calls 2 x 3, like WA6MNV, and then issued the calls at random. Maybe you and I take the license test same day, I get WA6MNV, you get KD6URL, and a week later the next new ham gets WA6AEF. It would just be the luck of the draw, a totally random, non-elitist call sign program, computer generated etc. No one could say, I am better, or have more years in service, or have done this on that, and that is why I am AL7X and you have the lowly call of WA6VSE or WL7CSG. This program

would entail all brand new calls for everyone. Everyone. AT random. It would generate an instant protest, I am sure, but once done, its a done deal and a whole bunch of squabbling will end.

Just thinking about the above call sign deal, but you can see where I am leading to. A society where all hams are equal, and one that is blind to age, years as a ham, or the holder of a level of license class that is "better" and has "a better call" than that "low life no code over there".

If you think that is extreme, be assured that in the 1950's the W x 3 calls, like W2FCJ started running out (as a novice he would have been WN2FCJ). Anyway, the FCC got to W2ZZZ, and call area by call area went to the K calls. Formerly K calls were overseas territories, like K4 for Puerto Rico, K7 for Alaska. The K x 2 calls like K2GM were mainland us calls, only K x 3 were territories. But the FCC freed this block of calls, by assigning KP4, KH6, KL7 etc to territories, and they started again all over with K2AAA until those were done with. Now, in the late 50's, the W2's had prejudice against the K2's. Remember when Dorothy, K2MGA worked or ran CQ magazine. Big furor. "She is a K2 not a W2!" Already the seeds of elitism had been planted.

There IS a place for elitism. You are elite, when your fellow hams look UP to you, and admire you, and want to be like you. As a teacher, a fine example. But a short call, an Extra Class license, 40 years as a ham, or blind, egotistical pride does not automatically make a person "Elite". That should be a status earned by each individual according to his own performance in society. Hiram Percy Maxim W1AW was not "elite" because he had a short call, one with the letter after number being A. And he was not elite because he was president and founder of ARRL, or because he wrote the Rotten QRM and other articles on Lids and poor operating practices. No sir. He was elite because he earned the instant respect of ALL amateurs when he was instrumental in getting allocations for ham operators from a government (navy) that wanted to keep it to themselves and control it, never share, and prohibit hamming. Now THAT is what he did, and he gave us all a wonderful gift, and in 30 years may his work still be admired and be fruitful.

This attitude that "I passed a 13 wpm, or I passed a 20 wpm code test, so I am better than you no code low life" has got to stop right_now! There is, after all, an easy answer. Say in my case, I became an extra in 1962 or 63 when the license first became available. The test was all on a.m. phone, cw and things like that. All gear was strictly tubes. But a new ham in 1996 could rightfully say to me, and he would be 100% correct in saying "So what Ram&#65533;n. 20 WPM, gee, that is good, but is it relevant? I just took, and passed a test on

solid state rigs, VLSI chips, digital techniques, frequency
synthesizers, narrow band FM, SSTV television and beam antennas."

So, as far as a TEST goes, who is the better ham? Me, because I took a 20 WPM test and a written on topics like heising modulation, rf ammeters, and splatter on a.m. transmitters? Or is he the better ham because his test was on the cutting edge of the amateur radio art, even if it was no-code.

So think about this. In 1962 I took the prescribed test. It was on techniques appropriate to THAT era. He took his test in 1996, and his test reflects THIS era, just like the test in the year 2046 will have questions totally inconceivable to us right now.

Maybe I am the poorer ham. After all, an old geezer with obsolete knowledge. Now of course, I could say, but wait! I have followed the radio art. I repair solid state 2-way commercial radios, I am a computer nerd. I even build plug in cards for my computers here (and some even WORK). BUT all that is moot, because friends, we are talking about tests, not what you know 30 odd years after the test.

So each of us is a full blown ham, and each one has proved his worth by taking the latest version of the ham test at the time it was given. He is a ham. So am I. He is proud of it. I am proud of mine. But I am also happy and proud for HIM, because instead of whining, complaining, etc., he buckled down studied and passed this 1996 test. So he has proven his commitment to the process of becoming a ham.

And that folks is that counts and what sets hams apart from CB'ers who only follow the rule of instant gratification.

So when we say we must keep the code test, we have one word too much in there. We should keep testing, yes, to prove the commitment the individual has to ham radio. But to say that Code, or for that matter a Triode Push Pull R.F. amplifier with link coupling and neutralization is somehow better than one on a DDS frequency synthesizer is totally ridiculous. Its comparing apples to oranges. And I pray that in the year 2046 the test will be appropriate to that age and time, and that my great grandchildren will also sweat the test, spending countless hours studying and visiting the Elmers, and finally get the ticket one October morning, and fire up their Franistat set, and work Rigel 6 on the first call! Now we are talking, fellows. Lets drop the narrow view and get this hobby of ours off its arse and moving ahead!

Ramon, AL7X. VE, CW man. Pro no-code. Anti incentive licensing. Proud of the hobby. Lets see it move
forward. Respect all modes and facets.

>**who are otherwise relatively normal.

I'm a new ham....just got my 'ticket' last week. Have been studying code for over a week now
and I can't seem to copy more than 20 or so characters before making a mistake. Is there a waiver available for us 'Morsely handicapped'? E and T have me all messed up and there's only 5 days 'til testing!

And yes, the above was written with tongue firmly in cheek. I actually DO plan to learn & use
code. I fully expect my first HF contact to be CW. Hopefully the lucky recipient won't be one of the half dozen or so people in this group that I've come to pay attention to. Newbies
can be so trying to the more experienced sometimes, and I'd hate to be labeled a LID right off the bat by people I've come to respect!!

I've got the written exam down (according to online testing). 15 hours of reading, re-reading,
flash cards I made up for those 15-20 questions I simply can't grasp (which I decided to just memorize - I hate it when that happens!), and I'm good to go. Now why can't code be that simple??

Second thought on your New Spin Tactic, of Lies and Deception.
Since we know the key word was" tried", and not suceed. Then we have to throw your 70.4 figure out the door. And at that point the Survey becomes useless.
Now a better Question would have been Did you really learn the INFO?
But of course NCI, and there great Leader will try and Spin it for you.
Carl a serious question, how much of NCIs BS is distorted? I cant believe any of your Members would believe anything you said after this failed try of distorting Info.

>And just a few months later I was just about sole support
>on the RT-505 radio -- for an entire BRIGADE in South
>Vietnam! Men's lives depended on me!

Oh, my. Let's look at some tactical facts of radio use in
the Vietnam War. There were a large number of different
radio sets used then, but infantry and armor units depended
primarily on VHF FM Voice in the 30 to 76 MHz range. The
RT-505 is the main receiver-transmitter unit of the AN/PRC-25
(manpack version), AN/VRC-53 (vehicular mounting), AN/GRC-125
(both vehicle and direct field unit operation). The RT-505 has a
fantastic 2 Watts RF power output maximum and is designed
for internal battery operation. The "prick-25" (affectionate name,
just like the "prick-6" of Korean War use, AN/PRC-6) was
designed as a small-unit radio, squad-platoon-company-FO
(forward observer) with channelized tuning to allow switching to
same-band net links to artillery and air support radios.

"Brigade:" In small-unit land force organization in the US Army,
the groupings are about the same as they have been for over
a half century. The smallest unit is the squad, a dozen grunts

led by an NCO; next up is the platoon, four squads, with a platoon sergeant and commissioned officer leading (2nd or 1st john); next is the company, usually four platoons plus a small detachment for administration, cooks, supply, company commander usually a captain (two bars, same as a USN lieutenant). From there up it becomes flexible according to specialty, task, etc., but it is common to have four companies make up a battalion...one company may be a headquarters company if the location is fairly permanent. Several battalions will make up a regiment but organization may have that as a "brigade" instead of regiment, largely a difference in name for unit-self-perq espirit feel.

From '64 to '73, "Nam" infantry and armor field radios were organized approximately the same with the manpack VHF FM sets connecting all. There might be a dozen "prick-25s" in a single infantry company, a few more in an equivalent size armor unit (they still referred to themselves as "cavalry" back then and I didn't pay attention to unit designators at Fort Irwin back in '89 so I call them by the generic "unit"...forgive me old armor types).

As to "being sole support for an entire brigade (with the RT-505)" that is a piece of snow-job self-puffery nonsense. The RT-505 is the main component of the "prick-25" and used in small-unit ops, by squads and patrols of two squads. It is no more the "sole support" than its older counterpart, the "prick-6" was in Korea. The selectable channel feature allows great flexibility in comm to platoon, company, battalion, forward observers, air support, artillery support, and so on. At battalion level and higher, there was a larger variety of radios, more power output, more bands.

You can find all of that referenced in printed media and on the Web. The Vietnam War ended 23 years ago.

>All of this is precisely true!

No. You were NOT the "sole support of a brigade" through some knowledge of the "RT-505" supposedly learned at Fort Monmouth. Use of the "prick-25" was taught to squad members at infantry schools and at armor schools. That's typically a few days, mostly for radio procedure and the hookups for manpack, vehicle, ground locations. The RT-505 has two frequency-select switches, a bandswitch (30-52, 53-75 positions, splitting 6 m), volume, and power-function switch. Definitely not rocket science to operate, about as complicated as today's CB front panel.

The AN/PRC-77 was introduced late in the Nam conflict, had essentially the same features and small-unit net organization. Those were all rendered obsolete by the operational introduction of the SINCGARS family beginning in 1989. That set is 30-88 MHz, voice or data, in-clear or encrypted, is a frequency hopper, and has variable power output up to 4 Watts. More reliable and far more versatile for small-unit ops, it takes two weeks to learn the proper

procedures for all its functions. That is taught at the Signal School
and ordinary civilians may access the site and obtain a very nice
computer-learning course program (public release) to learn how to
twist all the knobs and punch the keypad.

>Why should ** I ** have to pass ANY tests in this rinky-dink
>"Hamby-Pamby" outfit, huh?

You MUST do exactly as you are told by long-timers in the ARS.
You MUST show a willingness to be humiliated by those who
have mastered the morsemanship of the 1930s.
You MUST do all of that to meet the dedication, courage, honor,
respect due the gods of amateur radio.

>Why not just GIVE me the
>license, all the way up to EXTRA, because I was a radio
>whiz years and years ago? Huh?

"Radio whiz?!?" For learning how to twist knobs on a prick-25?

>And I'm a Veteran, love
>my country, go to church every Sunday, am a Kiwanian, and
>love my wife and daughter!

...I think you forgot Mom, apple pie, and the statue of Liberty.

>Whaaaaah! Whaaaah! I want my LICENSE -- NOW!

...then have QRZ give you your license. You passed their
tests, didn't you?

>WHY am *** I *** having to EXERT myself, huh?

...because Dickie told you...?

>That is, all I want is to be treated FAIRLY!

You will not get it for claiming "expertise" in radio obtained by
twisting knobs on an olive-drab CB set or being "sole support"
of an approximate 3500 personnel "brigade." Go tell your
story to the Army Times or the U.S. Army Military History
Institute. They need a levity break, I'm sure...

In article <uae48455h8k8d9@corp.supernews.com>, "Valentine Germann"
<vgermann@socket.net> writes:

>The consensus among those who are apparently informed
>is the the FCC decided, in about 1975, that code testing had
>NO regulatrory purpose.

Not quite. The FCC did not declare such a thing until 90-53. That
was 15 years later.

>Taking that at face value, well, it was and is just plain WRONG.

That face has no value...

>The amateur service still has a
>component referring to "promoting international understanding"
>and Morse Code is STILL valuable as a "language" that is
>understood around the world.

No again on two counts. In 97.1 the US regulations define
"promotion of international good will." That's not the same as
"understanding."

All on-off codings are representations of language symbols. They
are NOT "languages" in and of themselves. The so-called "morse
codes" and International Morse Code are representative of most
western alphabets, numerals, and punctuation marks.

>For this reason ALONE the testing
>provision should be retained, at some level, within the ARS,
>over and above its obvious historical and operational value.

No, even if you capitalize it, that "ALONE" is still alone and
not related to the subject of testing.

Since on-off codings were truly the ONLY way to communicate
in early radio, it does have "historic significance."

Radio regulatory agencies are not chartered or empowered to
maintain living museums of the radio arts. If you wish that,
please contact the National Endowment for the Arts in DC.

"Operational value" is questionable and is of curious use there.
Amateur radio is not a common carrier of messages (specifically
not so in the regulations) and is not an arm of some service that
"must get the messages through" as in the military or public
safety radio services. Voice communication modes are the most
popular on both HF and all bands about 30 MHz.

>Having had a couple of days to let Mr. Hare's comments sink
>in, the cavalier atttitude shown toward Morse by him (not even
>in the top ten of things that most hams are concerned about!)

>because I thought it was, er, REALLY sorry, but the ACTUAL
>reason for the cave-in by ARRL on this issue (in spite of what
>looks like an "effort" to "save code testing") could well have
>been a FEAR of NCI rising as a true competing organization.

Ah, yes, the "actual reasons." :-)

<snip of a review of a seance...>

>Institutional survival IS job #1 with ANY organization and the
>jettisoning of code might have been a very small price to
>pay to put the NCI threat, the LONG RUN threat, to sleep,
>hopefully for GOOD!

The only "decision" made by the ARRL BoD has been "not to
oppose any changes invoked on ITU-R S25.5" on the code
test issue. The IARU, the International Amateur Radio Union,
had voted to rewrite S25 to remove any ITU-R code test
recommendations. The IARU represents all the other amateur
radio organizations. In that regard on the code test issue, the
ARRL is simply outnumbered.

I think you've just answered all questions about your very belligerent attitude and activities here on this NG. It is now clear that you believe that anyone who held an Extra before restructuring was bent on lording his "rank" over lower class licensees in some sort of a "caste" system. Since you were never able to achieve Extra class status until FCC dropped the requirements, you had to settle for "second class" status, and that really chapped your ass, being so accustomed to being able to bulldoze your way to the top of whatever activity you happened to be involved in at any given time. So you insist on this inane disgusting treatment of any and all who held an Extra class ticket before you finally got one.

Thanks for clearing that up for us. If you think I served as a VE for many years just because I wanted to lord my Extra class license over newcomers, you're even more of a fool than you have shown to be so far.

Ah. Another "professional" survey from Newington. Just what we need to "prove" a point. And it will surely be as accurate as the last one. Right.

Besides that, more importantly it helps you prove something you want proved, so to hell with science. Works every time! Just like your ranting about "bringing the ARS into the 21st century" while you stuff a SSB mike in your mouth.

>
> Also, if the 2.3% of respondents who haven't yet taken an exam

> bandies about ...

Such a poll is so much garbage. Most newcomers don't even know about ARRL and few join, and for darn sure even fewer would make noise about how they memorized to pass the tests. Slide back under your rock.

It's a hopeless case. I just saw a transceiver listed in E-Bay's amateur radio section. It was either a 4 or 5 band (A,B,C,D ... you get the idea). AM, SSB, and FM - and, of course, a ROGER BEEP! I doubt any one buying a Radio Shack HT or VHF/UHF mobile rig will be able to use it without a license. They might get away with it, but I doubt for long. Currently, we do have some idiot in the Rochester, NY area (obviously a kid) who occasionally jams the input of our 10 meter repeater. He's smart enough not to stay on more than a few seconds at a time and we only have a general idea of where he is located. Again, I doubt anyone without a license is likely to get much use out of the rig. To use it simply to have fun and jam a repeater is stupid and and expensive way to get your kicks. The real problem (freebanders and especially truckers) is going to take real enforcement, even if it means someone might lose his tractor. I see EEI went bankrupt and the parent company has (apparently) started up another corporation selling the same 'stuff' and even uses 'EEI'. Oh well. Heck, if the CEOs of Enron and Global Crossings can pay themselves millions in bonuses and then the company files for bankruptcy the following day - including the loss of pensions for thousands of employees - I just don't see much likely to happen concerning enforcement of communications regulations.
We have the best government money can buy.

That's right, the old "victim" mindset can be turned into a real killer tool with which to crucify a bureaucrat who is trying to do his job but gets waylaid by PC.

If you were an FCC employee, what
> argument would you use to justify a skill test within a hobby

Why should it be in any way related to what services which have no relationship to the one in question? Answer: It should not.

Take the 30,000 foot view,
> like the FCC has to, and tell us what you see.

Hmmmmmm... There's Cecil, up there at 300,000 feet, still acting like an alien in the ARS. That would be because he is one.

I and others have asked the same thing.
Maybe Val will answer your query with something
more than vapor arguments.

> > That is, the matter

Val stolls down the propoganda path that tries
to repeat the fabrication often enough that people
ultimately say it must be so.

Cheers,
Bill K2UNK

***
>Carping and fragmenting into little cults like NCI
>won't solve anything and creates its own problems.

There are many such "cults" in Amateur Radio -- NCI formed to promote the removal of code testing; QRP ARCI (and others) to promote QRP; TAPR to promote digital operation -- and each of these organizations represents the interests of that organization better than ARRL does. I belong to several of them.

But none of those organizations consistently represents the interests of Amateur Radio across its broad spectrum of activities and interests. None of the above offered comments wrt the current 70 cm RFID matter, just as an example.

>that he didn't dare offend such a horde of "victims".

Are you saying he went with the solution that he felt would "offend" the fewest number of hams?

If so, then you are admitting that the preference for CW testing is the minority.

Or is your use of "PC" and "offend" and victim" trying to evoke an emotional response?

You aren't personally aware. I am not personally aware. There may be
some person somewhere not among the dead, the comatose, the illiterate
and the incoherent who can't learn five word per minute morse but such a
person would be an extreme rarity. So I state again: Only a twit would
belive such a statement to be totally inclusive. Are you stating for
the record that you are a twit?

No it isn't. Pecking orders are still in evidence in much of everyday life. Most of them aren't based on race, age, sex or religion. The only term I can come up with for your insistent claim is that you've become a nit pecker.

Answer: One of the main reasons for the Morse code requirement was mitigation of interference with the other services - also for a trained pool of CW operators for the other services including the military. Guess what, Dick? Most of the reasons that the FCC wanted hams to be skillful at CW are buried in the 20th century.

Are you saying that he couldn't operate on the air?

What good would a 1X2 call sign do anyone if that call sign was the only
right their Extra license conveyed?

My Extra license conveyed everything allowed to a Conditional, General, or
Advanced licensee, with the added benefit that I could establish an Amateur
Radio station in space.

Hello, all!

I cannot BELIEVE this "Len" moron FELL into my trap,
just as fellow dim bulb "CAM" has done, elsewhere in
this newsgroup! It's just amazing and what a great coup
for me, RA 68042751, Specialist Five, 9th Division, RVN,
1969 - 1970! After the Cambodian invasion I wound up
supporting, by myself for a while, the entire 3rd brigade
on this particular infantry radio. I tried to train another guy
to help me but, well, it never really worked out that well.
That is, training him AND fixing radios was WORSE
than just fixing the radios myself.

The RT-505 was quite reliable, a great radio, and unless
we had a lot of combat damage it was not THAT hard to
put back into the field. So, for a while, about a month,
it WAS possible for me to support the whole brigade, more
or less by myself. But I didn't really LIKE doing it!

However, since I did that, and other people, like this "CAM"
guy, think that THEIR non-Ham radio experience should give
them a free ride . . . how about a free ride for ME!

Val

If you are ready for a high performance multi-band HF mobile antenna, then I ask that you
visit www.qsl.net/k4kwh. This is a very heavy duty screwdriver-type antenna and goes beyond the cheap materials often seen in some others. Here are the basic specs.

Carolina Cyclone I

Full 2" loading coil (compare to 1 1/2" on DK3 copies)
#14 silver plated copper windings (compare to skinny little #16 wire on DK3 derivatives)
Wound at 8 turns per inch (compare to 10 TPI on DK 3)
Extra heavy duty finger stock using 1/4" wide fingers and extra springy for complete contact
(compare to the little copper or brass stuff that breaks easily)

Handles up to 800 watts SSB (Try that with a PVC screwdriver coil!)
impedance matching done with a simple little inductor at the feedpoint. No toroids to
give "finicky" performance/matching up on the higher bands.

And all without breaking the bank like those $300+ versions! Just $240 shipped to the
lower 48 states!

Hey, guys, it's SPRING (at least in the South), and it's time to get out and get that mobile
up and running!

> spectrum will be successful?
>

No. I don't think it's unlikely at all. But, Ed, really. Let me ask an honest question: why is it that most amateurs are rallied to action on a band that they likely have never heard (in the case of the Gigahertz-type stuff) or bands that are little-used in the amateur spectrum?

Before you are offended, yes, I would hate to seem any transgression into the amateur frequencies. But, I hardly feel it worth the effort to get all upset about *all* the spectrum when lots of it is little used. It isn't just a matter of protecting ham radio as a whole...it is about realizing that some of the battles are going to be lost so picking which "mountain" I think is worth climbing. I think being willing to give on spectrum that is least used is probably good policy. I'd be willing to bet that and spectrum lost in the Gig-range would be little realized by most amateurs--it isn't spectrum most use or are even able to listen to (for lack of receivers). I would not be as prone to action on a Gigahertz matter as I would, say for a 2M matter! Indeed, I'd "be willing" to let the Gigs go to keep 2M, ya know what I mean? I mean, we're going to lose somewhere--we can't keep it all forever.

>
> I think it takes both organizational and individual input to be effective.
>

Yeah, I agree. The ARRL, as an organization, will act on *every* band threat. That is what I pay you my membership for. I will individually act when I feel the part of the hobby I used most is threatened. I wouldn't

even be disturbed if the ARRL happens to "lose" on spectrum.

Some issues the ARRL undertakes are issues I don't even agree with. I don't agree with Congress being persued for action on the CC&R issue. I think it's a waste of time, won't be won, and don't agree with interfering with existing contractural matters. If someone moves into a neighborhood with restrictive conditions, that is their problem.

I suspect that's because 70 cm may be more popular "out there" than it is here; and is certainly a band that will draw many to comment.

Uh, yes, Val. What do you propose? The Million Ham march? Civil disobedience? Hunger strikes?

Jim is as pro-code as they get, but I think what he is trying to say is that it really IS a minority position. You work within the system, do what you can, and accept the results. Of course if the code testing is abolished, you can turn in your license if you feel strongly enough that it is the ruination of the ARS.

> Now, WHY are they doing more, on this and on several

> posals, and ex parte presentations, then, guess what,
> they could very well LOSE there, too!

Because it is one huge amount more important than the Morse code issue, THAT is why! While people here are yakking about Morse code and how Extra lites like me are CB'ifying Ham radio, (I can assure you I'm not) and Kim's callsign, as symbolic of the great decay of the Amateur Radio Service, they would be *much* better served by ensuring the Ham's right to put up some kind of antenna, legally.

> Shall we say then that they made only the minimum effort
> required in order to maintain appearances, and thus keep

> ONE wildcat organization running around was one too
> many! Another one, a "pro-code" one, was hardly in
> anyone's interest. I think these comments are MUCH more
> than "wild speculation" and are solidly validated by the facts.

If you want to spectulate that, you can.

It is always wise to pick one's fights carefully. Right now, the issues that need addressing are the old spectrum fight, which is an ongoing battle. The other is that nasty no antenna thing that so many developments have enacted. The ARRL seems to think that is more important to the future of the hobby. I seems to too! CW is pretty far down on the list.

I would suggest that if enough hams who believe that CW is the most important issue were to join the ARRL, they could force the agenda in their favor.

Interesting stuff. However, note that the survey did not limit itself to
newcomers or
those who recently took ham exams. One of those 1157 votes is mine, and the
most recent amateur license test I took was in 1970.

Hello, all!

This is getting to be more fun than humans should
be allowed to have! Inside [single brackets will be
a reference to my original message and following
>>double arrows will be this "Len" guy's moronic
replies to that. Following >single arrows will be Mr.
Robeson's on-target replies to Mr. Double Arrow, and
then inside [[double brackets]] will be my current
comment on their comments! Confusing enough?
Here we go:

[[I mentioned being the sole support of a brigade
in Vietnam as one reason I should just be given an
Extra class license, which seemed reasonable to
me since other people thought their non-Ham
radioi experience gave them special cachet. To
this "Len" wrote:]]

>>As to "being sole support for an entire brigade
>>(with the RT-505)" that is a piece of snow-job
>>self-puffery nonsense.

[[Then Mr. Robeson wrote:]]

>Of course having also been in Viet Nam, Lennie
>has full awareness of who was doing what, when
>and to whom . . . NOT. Just can't pass a chance
>to put YOURSELF up there, can ya, ya Putz?

[[I'm really laughing at THIS deal because I put this
message on (in part) to reel in the BIG ONES,
the FACTORY SHIP TROLLERS, Len and CAM.
And I snagged 'em both! That is, good old CAM
took my wailing about my license as an actual
complaint (!) while this "Len" guy has gone totally
ballistic over the SAME kind of bragging that he
has done continuously for months on this news-
group. The difference is, in my case, that I really
WAS, in effect, the sole support for a brigade, for
about 30 days. Really, it's not that big a deal but,
hey, it rang old Lennies chimes!]]

[[Anyway, then "Len" further wrote:]]

>>No. You were NOT the "sole support of a brigade"
>>through some knowledge of the "RT-505" supposedly

>>learned at Fort Monmouth.

[[And Mr. Robeson then wrote:]]

>Of course you can disprove this with EVIDENCE,
>Lennie..?!?! You personally know the CommO of that
>brigade? You have copies of Operational Orders or
>other operational documents from that unit? Other-
>wise it's a he-said/she-said, and the simple matter
>that YOU are the "she said" part makes anything you
>say suspect.

[[What I think is funny is that I might actually have
out-militaried old "Len," the ultimate cordite sniffer,
and so finally sent him off his rocker! Hilarious!
And I think I mentioned Fort GORDON, not Fort
Monmouth!]]

Continuing, in my original message I satirized "Len"
and "CAM" by wailing that my military experience
should count for a LOT in the Ham Radio world. And
"Len" BIT ON THIS, missing the satire completely!
I said that as a military radio "whiz" I should get some
serious consideration in the here and now.

>>"Radio whiz?!?" For learning how to twist knobs
>>on a prick-25?

And then Mr. Robeson wrote:

>Why not, Lennie? YOU want the FCC to give YOU
>a license for a test you passed in 1950-something.

[[EXACTLY what I was trying to point up! You know, just
when you think you've seen EVERYTHING on UseNet,
some guys like "Len" and "CAM" come trotting along
and show you stupidity that you couldn't possibly have
BELIEVED . . . until you had seen it for yourself! Wow!
Where the reference to the PRC-25 (Prick 25) came
from I don't know. Probably, that's the sum total of
"Len's" actual knowledge of Army radios!]]

Finally, "Len" wrote:

>>Leonard H. Anderson
>>ex RA16408336, Sgt (E-5),
>>United States Army (1952-1960)

And then Mr. Robeson wrote:

>This is supposed to be "proof" of anything? Are we
>supposed to be impressed? THIS is that "patriotic
>bunting" crap you keep accusing OTHERS of
>wrapping themselves in, Your Putziness. You want

>us to salute now? Creep.

[[Why, hell YES, we're supposed to be impressed
with this! Wasn't everyone impressed with MY wonderful
military record? Didn't it just HIT the SPOT, especially
when I satirized using such a thing to make myself
actually DESERVING of SPECIAL treatment with
reference to Ham Radio? It sure lit old "Len's" AB,
didn't it, all the way up to "FULL -- MILITARY!"]]

[[Rarely have I had more fun than this on the net!]]

[[Val]]

That's kinda short-sighted, Kim.

How about the teen-aged offspring of someone who already lives in a CC&R-impaired house wants to become a ham?

How about the retired lady who has raised a family, lost her spouse, and now wants to pursue this hobby her grandson loves so much (but she's lived in a CC&R-impaired development since 1971)?

I'm sure there are other examples, but the above two examples are people that I personally know.

Do we just tell them "Kim says tough shit -- deal with it."?

Ed:

I think the point is perfectly clear -- it was a brilliant and amusing satirization of the whining of those who wanted reduced licensing standards in the ARS -- particularly with regard to code testing! He should have satirized the manner in which the ARRL is pandering to them, but that probably wouldn't be quite as funny.

Cecil:

Incorrect. We can replace Morse code exams with basketball-
dunking exams only if and when basketball-dunking becomes a
practical and useful skill for radio amateurs. Since it is not, and
never could be, there will be no test for it, and you've made yourself
look like a wanker for suggesting it.

>
>73, de Hans, K0HB

Hansl:

I don't disagree with much of what you said. However, the loss of
the local ham radio store is a simple fact of economic life. The
technological changes that brought us shopping through 1-800
numbers and the Internet has also brought about a great
reduction in the interest in ham radio per se. How is ham radio
EVER going to compete with the World Wide Web? What are
the young, bright, technically-inclined prospective hams who no
longer have to endure the code testing "hazing ritual" going to
create that can give me the same abilities to access information
quickly and conveniently as I can with any computer, cell phone,
wireless PDA, etc? Keep in mind, this access has to also be
totally free of all user charges, in order to compete with ham radio!

I have absolutely no problem with wider availability of ham gear,
but the problem is still going to be to keep it out of the hands of
bootleggers -- and their ingenuity will never cease unless some
of them are actually tossed in the slammer or made to write
checks with lots of zeroes. Even then, all we'll have is fewer
bootleggers, but not nearly enough new radio amateurs. The
sad fact is this -- ham radio doesn't have a very bright future at
the moment. And, unfortunately, in our desperation to evoke some
growth -- ANY growth, all we've managed to do is create a highly
Balkanized ham radio culture, based on the fact that a certain
few people are too lazy to learn a practical, useful communications
skill, and don't want the rest of us speaking the truth about them!

BTW -- I've been in a lot of ham radio stores, past and present, and don't recall a single one of them having a coffee pot to hang out at -- but they usually did have a manager who didn't want you taking up his valuable floor space unless you had your credit card in hand! It may have been like that in the old days when hams had to make regular visits to replace burned-out vacuum tubes, but it was never like that at any time in my ham career, which essentially began in the early '80's. I can understand your longing for a return to the good 'ole days of the '50's thru the '70's, but that's not the way it is now, and it will never be that way again.

Hansl:

I've been axing the same thing for years. However, since you seem
to approve of the "dumbing down" of licensing standards, particularly
WRT code testing, one would seem to think you are one of those
who want the "numbers" to increase. No matter; this marginal growth
trend will not increase, and it will, in fact, turn into a downward
spiral all too soon. I wish I was wrong, but I don't have that kind of
luck.

Val:

The "stinkbomb" comment notwithstanding, I guess I can see your
point, part way. I'll admit that NCI did have a more profound effect
on the recent changes to the licensing standards than a larger
group, FISTS, had.

>>You see, NCI is just a small group of hams who write letters

>I don't think it's NCI itself, it's the fact that ANY organization
>at ALL has to be neutralized, given the status what am quo.

I think the thing that has Ham Radio, and the ARRL, "shaking in
it's boots" is the effect of the Internet and the explosion of wireless
technology. These days, being able to communicate without being
physically tied to a wall outlet of some sort is a common, everyday
occurrence experienced by anyone with the wherewithal to acquire
the technology. Quite frankly, we (radio amateurs) will never be
able to come close to duplicating the capability of even one of
the most ubiquitous cell phones, and do so without cost to the

user. Sure, we can talk worldwide with our fellow hams with very portable equipment, but not equipment that is shirt-pocket sized, and can connect to particular individuals at a time of the user's choosing.

>>What the ARRL is concerned about is the dismal growth
>>record of the ARS of late, and the fact that if more people

>>extinction. Follow the money, and you will learn the truth.
>
>Well, yes, if this is true then a panicked group of leaders
>can very well make mistake after mistake after mistake.

Oh, they've done that, all right. Their mistake was to think that "dumbing down" our licensing standards would actually have the effect of reversing the trend toward negative growth in the numbers of licensees. Right now, there may be evidence that this is so; unfortunately, in a few years, when the licenses of the No-Code Tech generation start expiring, we're going to find that we're no longer staying ahead of our losses.

>Nothing causes sweaty palms quite like red ink.

Well, the ARRL has had to face a lot of that, as well.

>>The ARRL had to ditch any notion of supporting the
>>status quo in code testing because they knew they can
>>attract more potential members with a dumbed-down,
>>free-for-all type of licensing structure, than one with
>>any practical, meaningful standards.
>
>This would go under the rubric of "pounding the rubble"
>and unfortunately does not bode well for long-term
>success.

No, it does not. However, they feel as though they must do whatever is "politically correct" in order to ensure that they are not offending those who disagree with code testing.

>It things really are as you say then some kind
>of renewal MUST begin soon, so as to insure that the
>incoming raw material really DOES advance in the radio
>arts, SOMEHOW, so as to hold their interest. What do
>we know about retention of new Technicians, by age
>group? I guess those stats are just now starting to come
>in, would that be right?

Right now, the raw numbers of hams in all license classes seems to have reached a stable plateau; it is even showing marginal growth. However, this is not going to persist. And ten years from now, there will be a definite downward trend.

"Give away" licensing has not had the effect that the ARRL desired. Their organization is in severe jeopardy. They will have to change in some fundamental way in order to remain viable. They will have to become an organization of "ALL" communications hobbyists, including CB'ers, FRS'ers, SWL's, Marine HF/VHF users, in addition to radio amateurs. They will have to somehow figure out a way to use what's left of our VHF/UHF frequencies to develop a nationwide system of "virtual" cell-phone service, available without by-the-minute airtime charges, to augment our present system of 2-way repeaters. They will have to clamp down totally on radio "badboys" who make frequencies unusable by sending violators to jail and/or bankruptcy with stiff sentences and collection of heavy fines. The only thing they won't do is retain the status quo in our band/mode allocations. They will give away as much present exclusive CW spectrum as possible to expand HF phone. This is the big mistake.

I'm afraid to say it, my friend, but you waited too long to get involved in ham radio. You've missed out on the best days it ever had, and ever will have. It's all downhill from here.

Next time you're in Mounds View, MN stop in at "Radio City",
or the next time you're in Watertown, SD stop in at Burghardts.
Both stores will brew you up a fresh pot if the current one is
too stale for your refined Eastern taste buds.

With all kind wishes,

>Here are some numbers to think about. These are the number of unexpired >FCC ARS licenses held by individuals on the dates listed:

Very nice typing. The arrangement of numbers seems to confuse the issue more than presenting anything clearly.

From the AH0A website on amateur statistics, end of March 2000 to end of March 2002, the number of NEW licensees in each class were:

Technician: 38,362
General: 1868
Extra: 419

The ratio of New Technician to New General plus New Extra was 16.77:1. Note that these are NEW licensees, not "upgraders."

The total number of licensees increased by 2400 in that two year period; 677,784 to 680,184. It should be clear that the total number increase is due to the NEW Technician license and also that Novice-thru-Extra classes have been EXPIRING, their total numbers dropping.

If there were no Technician class, the total number of ARS licensees in the same period would have dropped to 641,822 or down to 94.69% of what it was two years before (the month before restructuring).

>>that is a piece of snow-job self-puffery nonsense.
>
> Of course having also been in Viet Nam, Lennie has full awareness of who >was doing what, when and to whom.....

No need to have been in Viet Nam or French Indochina. In the 29 years since the US involvement ended (1973), there has been a great deal of information written about it, the tactics, the unit organizations, the campaigns, including detailed information on radio use.

> NOT.

I've never been to southeast Asia. I know many who have been there. Steebie isn't one of them...

> Just can't pass a chance to put YOURSELF up there, can ya, ya Putz?

I'm just correcting someone's self-puffery and effrontery to state they were the "sole support of a brigade" by knowing only a small-unit radio. :-)

>>No. You were NOT the "sole support of a brigade" through some
>>knowledge of the "RT-505" supposedly learned at Fort Monmouth.
>
> Of course you can disprove this with EVIDENCE, Lennie..?!?! you >personally know the CommO of that brigade? You have copies of Operational >Ordes or other operational documents from that unit?

The "brigade" was never specified so it is impossible to know all of the commanding officers of a brigade (minimum commissioned rank a full bird colonel, more likely a brig general). Op orders aren't needed since others IN the US Army have already sifted through all that and put into a number of different US Army documents, including analyses of Army radio operations in Viet Nam found at CENCOM (US Army CENtral electronics COMmand, Fort Monmouth) and Fort Gordon, GA, and a few other Army places. A good place for civilians to browse is the TRADOC site (TRAining and DOCtrine) digital library on the Web (I've given that site before). One can start with FM-100-5 and work upward from there.

With a little REAL research, it is possible to find detailed reports on the last use of OOK CW in US military in southeast Asia.

Some have shared their experiences first-hand on various web sites, both in the USA and abroad. That includes radio procedures and intimate details of certain radio use. The prick-25 is popular with military radio collectors and one need only do a web search to find all sorts of information on AN/PRC-25 and "RT-505." One historian of the prick-25 even has a full manufacture history, contract awards, etc., for its entire production-operational life. Interesting stuff in my opinion but probably would not be to those who need to destroy others in messaging to make themselves look good.

> Otherwise it's a he-said/she-said, and the simple matter that YOU are
>the "she said" part makes anything you say suspect.

Not at all. Just do a Search for either "PRC-25" or "RT-505" and see what sites turn up, go to them and read them. As to US Army unit organization from squad on up, that is found in many Army web sites. The US Government Printing Office has many documents on sale that describe that. That hasn't changed since WW2 days.

>>"Radio whiz?!?" For learning how to twist knobs on a prick-25?
>
> Why not, Lennie? YOU want the FCC to give YOU a license for a test you
>passed in 1950-something.

No again. That supposition has been raised by the rabies-infected, frothing at the message mouth. I am not demanding, expecting, or otherwise desiring an amateur radio license, just arguing against some in here who attempt snow-jobs year around. :-)

I've twisted the knobs on a prick-25, about as hard to do as twist the same number of knobs on an old Narco NavComm radio while in flight in 1962 or any one of a dozen CB sets of the last two decades. I've twisted the knobs on a lot of different radios, some military, others civilian, none of which needed an amateur radio license to operate or transmit RF. Most of them didn't even need a civilian radio license of any kind! All perfectly legal too! [don dat frost yer doughynuts? :-)]

>>Leonard H. Anderson
>>ex RA16408336, Sgt (E-5), United States Army (1952-1960)
>
> This is supposed to be "proof" of anything? Are we supposed to be
>impressed?

Steebie, you should be...you've never admitted to ANY USMC radio operation of any kind, can't immediately call to mind any radio nomenclatures, have postured about shouting obscenities of many kinds (some you aren't familiar with) and haven't hit a damn thing.

>THIS is that "patriotic bunting" crap you keep accusing OTHERS of
>wrapping themselves in, Your Putziness.

No, just a point of reference. Snow-job con-men are found everywhere. In here they rely on most radio amateurs NOT having been in military service...or, if they served, did not do so involving radio. That way they

can make out like they were next to being War Heroes...or were the father of one (famous story of one whose "son was behind enemy lines in Iraq sending intel via CW during Gulf War"...priceless stuff!).

I've been involved with military radio for half a century as both service-man and civilian. I claim nothing outstanding there, never have, just did my job and got on with it. I've only contributed a little tiny part to the enormity of the entire radio world, but I've never told any lies about it nor attempted to exaggerate anything. Indeed, I've heard many a tale, many a falsehood, lots of differing merde on what others have claimed, have refuted those with recorded history. That infuriates the tale-tellers and con-men and also brings a smile to my face. The truth shall set us all free, lies result in a perverse personality that tries to "battle" those that don't permit posturing and self-glorification.

>You want us to salute now?

It won't hurt you, even using all five fingers. :-)

I tuned up and keyed-down my first HF transmitter before you were conceived...1 KW BC-339 running FSK RTTY. Chronological fact. By the time you were born I was working my MOS 281.6 as a microwave supervisor with three-up-and-one-down on the sleeve.

> Creep.

I know that pisses you off no end and you can't help but "reply" in such terms, so I "salute" you with upraised middle finger of my left hand. That's more than you deserve. :-)

Nope, it just got me back to where I was as a Conditional-General a few months before taking the Extra tests (along with the General and Extra writtens, 13 and 20wpm code, since Conditionals got credit for only the Novice)

> Today, it conveys a lot of Extra priveleges.

So? When it all settles out to the Proletarian "one class" service, everyone will have all of them. Not they they will be able to actually use them.

The closer ham radio moves toward CB, and for darn sure it has already
moved a long way in that direction, the less favorably it can be viewed
by anyone.

A "brigade" of WHAT? NVN?

What you MIGHT be the "sole support" of would be a
boot-repair unit.

>[[What I think is funny is that I might actually have
>out-militaried old "Len," the ultimate cordite sniffer,
>and so finally sent him off his rocker! Hilarious!
>And I think I mentioned Fort GORDON, not Fort
>Monmouth!]]

No. A small slip of the fingers considering that Fort
Monmouth was THE Signal School in the 1950s while
CAMP Gordon was Signal basic training in that
same period. As time progressed and radio-electronics
became more prominent, Monmouth became CENCOM

and Gordon was renamed as a Fort and the center of
Signal Corps technical training. I've been to Monmouth
several times as a civilian since then, only once to
Fort Gordon as a civilian.

>Continuing, in my original message I satirized "Len"

>"Len's" actual knowledge of Army radios!]]

Noooo...it's more extensive than that, sonny.

It includes USAF radios and a few USN radios...not that
the service branch makes much difference since the
"AN" preceding the slash on the radio system nomenclature
means "Army-Navy" or use by all branches. Heck, even the
State Department has used military radio equipment...:-)

Do you need an instruction on twisting the knobs on the
"RT-505"? You can get a partial repro of the operator's
instruction manual from Fair Radio Sales for $20. They will
even sell a used-but-working RT-505B for $300, handset is
$18 extra. Live it up, buy one for yourself and pretend you
are still in 'Nam playing "sole support for a whole brigade!"

>[[Rarely have I had more fun than this on the net!]]

>Len, do you think he was paid to learn code at Ft Gordon?

Hard to tell. CAMP Gordon was the Signal School for Field Radio MOSs in the 50s and those had to learn morsemanship (or wind up in the infantry or someplace). I didn't follow what happened later since my civilian pay-check awarders weren't interested in morsemanship. :-)

I gonna hafta research the PRC-25 a bit more on the web when there's time, see if that thing was operational by the Good Soldier Schweik in "in-country." All I know is that it is very obsolete now for small-unit ops in the US military. :-)

I figger he was sent through the wooden barracks buildings at Gordon where the typewriters kept being thrown out of windows (the code school area of field radio) in frustration. He probably washed out and was re-assigned to some other training.

If he was really an "RA" in the late 60s he deserves some credit. The draft didn't end until the mid-70s. Draftees got a "US" as a prefix of their ASNs. Musta bin a tuff duty in 'Nam if he got the idea that a lil 2 W maximum VHF radio is gonna be the "sole support" of an entire brigade!

Well, if he had to tell one, he made damn sure it was a BIG one! :-)

Oh yes, I keep forgetting, you're always automatically the elite.
Except, as it happens, in ham radio you never could cut the mustard
until the Grate Dumbdown. Shame, isn't it? ANd the source of MUCH
frustration for you, thus trouble for the rest of us. You're a real
jewel.

You invented the "ham radio pecking order" so that you could work to tear it down since you couldn't be at the top of the heap, having not achieved the Extra license until the Grate Dumbdown. For most of us longtime Extras it's just another challenge accomplished. Too bad you choose to label a challenge as a pecking order. Shows your mentality, your genius aside. I know, you're so brilliant that nothing is ever a challenge. We've heard all about it, repeatedly, ad nauseum.

We have
> discarded racial pecking orders, sexual pecking orders, religious

The discussion is not about CW,
> the mode. The discussion is about mandatory Morse code testing.

There is simply no way to separate the two. For once testing is completely gone, it only a matter of time till CW itself dies out. It's as certain as the rising sun. The small numbers of new CW users will never replace reductions from attrition, meanwhile the Carl Stevensons of the world (and probably you) will "change their minds" and work to remove spectrum from CW as "inefficient allocation of resources" and urge FCC to do away with even the lower 25.

Thus the world loses the most basic, easily implemented and, when one considers the minimal overhead required, the most efficient radiocommunications mode yet invented. There is no other mode that can be implemented with a single active device, both to transmit and to recieve.

>EVER going to compete with the World Wide Web?

Oh, that's easy.

Ham radio can successfully compete because:

It doesn't go belly-up in a storm.
It can go MOBILE.
You can do it while driving
Ham radio has no spam

The net has no sense of adventure - you still cannot call CQ and
expect to get to talk to the sorts of people we've been able to talk
to in the past - a King (Hussein), politician (Goldwater), numerous
actors, etc.

The net offers no basis for competition for those so inclined. Know anyone who as won a net contest lately? Yeah, you can play Quake over the net, but not unless you have a fast connection. But you don't _need_ the net to play Quake.

The net and ham radio are not even competitors. They are for different things. I like 'em both, and have been relatively inactive in ham radio for a few years, but now have this gigantic hole close to the house into which I intend to pour concrete around the base of my tower. I'm building the station I always wanted (well... the station I can afford, really... and always wanted) but will continue with the net, too. And when I have it all built, I will still use the net, and I will ham on HF.

>What are
>the young, bright, technically-inclined prospective hams who no
>longer have to endure the code testing "hazing ritual" going to
>create that can give me the same abilities to access information
>quickly and conveniently as I can with any computer, cell phone,
>wireless PDA, etc? Keep in mind, this access has to also be
>totally free of all user charges, in order to compete with ham radio!

If you want to access information, use the net.

If you want to do some good public service, get a ham license. You gonna use the net in order to be the only link some poor boater in a storm in the Carribean has to the Coast Guard and possible rescue? Nope, the net isn't going to do that for you. Gonna use the net from your car in the middle of nowhere to call in a bad accident? Nope. Use the net to provide coordination for a canoe race? Charity walkathon? Pro rally? No, no, and no.

Plus, the net is an isolating experience. Meet people locally? Not so far, not for me. But get a ham license, join a ham club, and you have a chance to meet some new people, make some new friends. Try that with the net. You can do it by joining a computer club, too, but you don't need the net to do that either.

>I have absolutely no problem with wider availability of ham gear,
>but the problem is still going to be to keep it out of the hands of
>bootleggers -- and their ingenuity will never cease unless some
>of them are actually tossed in the slammer or made to write
>checks with lots of zeroes. Even then, all we'll have is fewer
>bootleggers, but not nearly enough new radio amateurs.

Don't we have something like 800,000 hams now? How many do you want?

More is generally better, but the ARRL membership is still never going to match, say, the NRA's 4.5 million...

>The
>sad fact is this -- ham radio doesn't have a very bright future at
>the moment.

Disagree. I've heard this for 35 years, ever since I started ham radio when we had less than half the number of US hams than we do now. Ham radio has every reason to be optimistic. It continues to offer its participants, _and_ the public, more and more in the realm of satisfaction, service, entertainment, and the ability to do good, without the _requirement_ to do the latter. You only really have to refrain from doing bad to use ham radio. Ham radio has always been fun, always will be fun.

>And, unfortunately, in our desperation to evoke some
>growth -- ANY growth, all we've managed to do is create a highly
>Balkanized ham radio culture, based on the fact that a certain
>few people are too lazy to learn a practical, useful communications
>skill, and don't want the rest of us speaking the truth about them!

We may or many not be in a growth lull. If we are, future rules changes, or changes in other aspects of life such as the realization that the net is not the entertainment medium everyone thought it was 2 years ago, etc. will make those people that sought it seek something else, and we will be here.

>BTW -- I've been in a lot of ham radio stores, past and present, and
>don't recall a single one of them having a coffee pot to hang out at --
>but they usually did have a manager who didn't want you taking
>up his valuable floor space unless you had your credit card in hand!

I've never experienced that. I can go into Ham Radio Outlet and buy $3000 or sfuff, or just look at the magazines and talk radio to the salespeople, and the experience is the same.

>It may have been like that in the old days when hams had to make

>like that at any time in my ham career, which essentially began in
>the early '80's. I can understand your longing for a return to the
>good 'ole days of the '50's thru the '70's, but that's not the way it
>is now, and it will never be that way again.

I don't think it has to be. I started in the mid 60's, and ham radio holds more promise of the ability to do more things for less money (adjusted for inflation) than it ever did. As long as you don't make the big ham mistake of moving into a subdivision with covenents, or an area with yet a 4th-5th level of government that is a homeowner's assocation, you can have a great time with ham radio, beat the net badly in overall satisfaction... and receive no spam.

Dang, this is strange. I am rarely optimistic about anything. But I've been pessimistic about ham radio as a reaction to posts like this, plus writing of people like Wayne Green for 2 decades or more after incentive licensing, and the only thing I've gotten out of it is less time on the air and an education not to listen to pessimists, who are almost always wrong.

writes:

>Jim is as pro-code as they get, but I think what he is trying to say is
>that it really IS a minority position.

Not at all, Mike.

I'm both procode and procodetest. And all the surveys, polls and other
indicators I've
seen show that the majority of interested parties are procodetest, too.

But the FCC is not required to follow the majority opinion in all cases. If
they were,
many of our ham bands could have been reallocated to cb many years ago.

>You work within the system, do
>what you can, and accept the results.

And that's exactly what was done.

The fact that the most sweeping license test changes since the mid-1960s
gathered
only about 2500 comments and reply comments indicates most hams and would-be
hams
simply didn't care all that much how it turned out.

> Of course if the code testing is

>and Kim's callsign, as symbolic of the great decay of the Amateur Radio
>Service, they would be *much* better served by ensuring the Ham's right
>to put up some kind of antenna, legally.

I don't think it says "Extra lite" on your license, Mike. Betcha it says "Extra", just like mine.

The CC&R issue is very different from the code test issue for a number of reasons. Code testing is
purely a "radio" issue - those not involved with ham radio are essentially unaffected. Preempting
CC&Rs is a whole 'nother thing, because it pits the preempting authority (the FCC) against local
governments and private contracts that were specifically designed to be almost impossible to change.

Most important, in the case of CC&Rs the FCC has told us how to get the preemption. We need a
congressional mandate. The way is clear.

> I would suggest that if enough hams who believe that CW is the most
>important issue were to join the ARRL, they could force the agenda in
>their favor.

And the opposite is true!

The fact is that opinion on the issue is divided, and the ARRL leadership is in the unenviable
position of having to try to satisfy two opposing positions. The result is a compromise.

FISTS seems to be a classical "interest group" playing
by standard rules of conduct. Against purely internal
competition this can be effective. However, code testing
has very strong EXTERNAL enemies and against THOSE,
supra-interest-group tactics have to be used. If the
FISTS organizers had become so upset with the ARRL's
non-defense of code that they began to agitate nationally,
and to make their single issse THE issue, (like NCI did) and
thus make REAL trouble for The Newington Crowd, well,
things might have been more interesting. However, it
appears to me now that since there was serious desire to
scuttle code within The Newington Crowd itself (!), FISTS,
or any other similiar organization, had very little chance of
success where code testing was/is concerned. Only
a full-scale attack on the current ARRL leadership would
have had even a prayer, and that not much.

There has been, I think, a complete failure of marketing
within the ARRL and Ham Radio in general. That is,
when Big Money moves in on you (and this is what has
happened to Ham Radio with the cell phones) and takes
away the mass market, well, you MUST move upscale.
That is, you must re-position yourself in the market as the

HIGH-QUALITY experience. And, I hate to say it, part of
that "quality" is the historical aspect of your product, which
the ARRL is busy selling down the river, even as they
earmark funds for a museum there at HQ. Here in the mid-
west, when Wal-Mart comes to town, you had better not
try to take them on straight-up. No, you had better get
away from them somehow and so sheer off the top part
of the market for yourself. If you don't, if you think you can
get down in the gutter with them, well, you're dead meat,
as witness what has happened nearly everywhere. Ham
Radio MUST stop worrying about just "the numbers" and
start thinking about the QUALITY of the people it is going
to attract. I think it's the ONLY way, in the long run. If the
quality is there then, in the end, sufficient numbers will be
there, too!

>Their mistake was to think that "dumbing down" our

>evidence that this is so; unfortunately, in a few years,
>when the licenses of the No-Code Tech generation
>start expiring, we're going to find that we're no longer
>staying ahead of our losses.

The changes in the licensing requirements have meaning
only if the people who would otherwise have not been
brought into the avocation STAY within it and advance.
One of the primary reasons people become Hams, or
amateur astronomers, or rock hounds, or whatever, is
because that act separates them a little from the crowd,
enhances their individuality, and gives them a bit of
"cachet," of distinctiveness. Ham Radio, it seems to me,
is going the wrong way here. That is, the appeal has to
be made, somehow, that to be a Ham * DOES * make
one a cut above, but in a GOOD way! This desire to
flatten out the licensing is the WRONG WAY to go right
now, I think. However, since that flattening is going to
happen, no matter what, a way has to be found, and
quickly, to generate some extra status for Ham Radio.
If this isn't done, well, the future does look bleak.

>Right now, the raw numbers of hams in all license
>classes seems to have reached a stable plateau; it
>is even showing marginal growth. However, this is
>not going to persist. And ten years from now, there
>will be a definite downward trend. "Give away"
>licensing has not had the effect that the ARRL
>desired. Their organization is in severe jeopardy.

Well, maybe so . . . and definitely so if they don't
re-position themselves.

>They will have to change in some fundamental way in
>order to remain viable.

Well, I don't know about this. What they have to do is
get re-connected with what makes Amateur Radio
an attractive thing to do. What I see them doing now
is trying to defensively hold onto spectrum and other
things by saying, "Hey, we're GREAT!" . . . but the
fact is that no where near enough has been done of
late to back that up. And, quite frankly, lowering the
entrance requirements does NOT help here, at all, in
the long run. The question has to be asked: What
IS the "core experience" of Ham Radio? To me,
part of that "core" is the long history of the avocation
and connecting to it . . . and that includes CW.

>They will have to become an organization of "ALL"
>communications hobbyists, including CB'ers, FRS'ers,
>SWL's, Marine HF/VHF users, in addition to radio
>amateurs.

Oh, wow, I think this would be an absolute disaster.
No, amateur radio and the ARRL has to go the other
way, BIG TIME, or it IS doomed.

>They will have to somehow figure out a way to use what's
>left of our VHF/UHF frequencies to develop a nationwide
>system of "virtual" cell-phone service, available without
>by-the-minute airtime charges, to augment our present
>system of 2-way repeaters.

This is trying to compete with Wal-Mart, in my view. That
is, Ham Radio will just get killed. And does Ham Radio
have their airwaves to go into direct competition with the
phone companies? No.

>They will have to clamp down totally on radio "badboys"
>whomake frequencies unusable by sending violators
>to jail and/or bankruptcy with stiff sentences and
>collection of heavy fines.

It looks like the FCC is now helping out here.

>The only thing they won't do is retain the status
>quo in our band/mode allocations. They will give away as
>much present exclusive CW spectrum as possible to
>expand HF phone. This is the big mistake.

It will be if that's all they do, that's for sure.

>I'm afraid to say it, my friend, but you waited too long to get
>involved in ham radio. You've missed out on the best days

>it ever had, and ever will have. It's all downhill from here.

Well, it could be. So much has changed over just the last decade and the current psychotic concern with the numbers (of Hams) has all the elements of target fixation. I just hope that the guys on the flight deck realize the problem BEFORE the ship augers in.

>
> A little better than one percent increase per year.

Incorrect. 683,154 is only a 1.33% increase over 674,792.
(683,154/674,792 = 1.0133, rounded off).

1.33% increase in 22.5 months is only 0.709% per year. No way that's
"a little
better than one percent increase per year"

Musta used an Intel processor to do your math, Cecil. ;-)

> Looks like restructuring is working perfectly.

How so?

According to

http://www.ah0a.org

the total peaked at 684,359 at the end of March 2001, less than a year
after
the restructuring changes took effect. Since then the total has
declined slightly.

Hello, all!

I have decided to move this exchange, between Mr. Roll
and myself, to its own thread. Perhaps it will prove
useful in some way. Mr. Roll's comments are preceded
by single arrows.

>The "stinkbomb" comment notwithstanding, I guess I can
>see your point, part way. I'll admit that NCI did have
>a more profound effect on the recent changes to the
>licensing standards than a larger group, FISTS, had.

FISTS seems to be a classical "interest group" playing
by standard rules of conduct. Against purely internal
competition this can be effective. However, code testing
has very strong EXTERNAL enemies and against THOSE,
supra-interest-group tactics have to be used. If the
FISTS organizers had become so upset with the ARRL's
non-defense of code that they began to agitate nationally,
and to make their single issse THE issue, (like NCI did)
and thus make REAL trouble for The Newington Crowd,
well, things might have been more interesting. However,
it appears to me now that since there was serious desire
to scuttle code within The Newington Crowd itself (!), FISTS,
or any other similiar organization, had very little chance
of success where code testing was/is concerned. Only
a full-scale attack on the current ARRL leadership would
have had even a prayer, and that not much.

>I think the thing that has Ham Radio, and the ARRL,
>"shaking in it's boots" is the effect of the Internet
>and the explosion of wireless technology. These days,
>being able to communicate without being physically

>can talk worldwide with our fellow hams with very portable
>equipment, but not equipment that is shirt-pocket sized,
>and can connect to particular individuals at a time of the
>user's choosing.

There has been, I think, a complete failure of marketing
within the ARRL and Ham Radio in general. That is,

when Big Money moves in on you (and this is what has
happened to Ham Radio with the cell phones) and takes
away the mass market, well, you MUST move upscale.
That is, you must re-position yourself in the market as
the HIGH-QUALITY experience. And, I hate to say it, part
of that "quality" is the historical aspect of your product,
which the ARRL is busy selling down the river, even as
they earmark funds for a museum there at HQ. Here in the
midwest, when Wal-Mart comes to town, you had better not
try to take them on straight-up. No, you had better get
away from them somehow and so sheer off the top part
of the market for yourself. If you don't, if you think you
can get down in the gutter with them, well, you're dead meat,
as witness what has happened nearly everywhere. Ham
Radio MUST stop worrying about just "the numbers" and
start thinking about the QUALITY of the people it is going
to attract. I think it's the ONLY way, in the long run.
If the quality is there then, in the end, sufficient numbers
will be there, too!

>Their mistake was to think that "dumbing down" our

No, a twit would be a nit pecker who tries to make more of a statement
than is intended--perhaps simply in order to fill his idle hours.
Most folks would not believe that "Anyone can become a ham" would mean
those who are illiterate, drooling babblers or those who have ceased
breathing. I think you're still guilty.

I disagree, and what I heard was what you said earlier- "FCC will just
do whatever they want anyway, what I have to say won't make any
difference. Commenting is just a waste of my time and effort, and causes
me even more frustration."
As you know, I did comment.

I have no firsthand information on it, and it sure didn't make the ham radio publications, but the word is that Nancy Kott, WZ8C who is the head of FISTS, got into a wordfight at a forum at the Dayton Hamfest with Fred Maia, W5YI who was then the Director of NCI, (later he relinquished the post to Carl Stevenson) and Nancy was said to have given Fred a real trouncing, and made many points he couldn't refute. It's a shame the ham mags refuse to publish ALL the news.

But FISTS decided early on to avoid a nasty fight over the CW test issue. I imagine they realized, as so many did, that the single ham at the FCC whose policymaking decisions are rubberstamped by the full Commission, would handle it however he wished regardless of what the majority of hams thought.

I agree, and the evidence is in the implementation of the "Big Project"
by ARRL.

That is,
> when Big Money moves in on you (and this is what has
> happened to Ham Radio with the cell phones) and takes
> away the mass market, well, you MUST move upscale.

Finally that has been realized in Newington. ARRL HQ has for far too
long been a very provincial, internalized society on its own, doing not
much of a job of handling the true needs of the ARS, and were either
very myopic or just ignored many of the problems of the ARS. Much of the
time they fail to act because of the divisions an issue generate within
the ARS and their membership. The philosophy seems to be to ignore many
of the divisive issues and they will resolve themselves or maybe,
hopefully, just go away. DOesn't work well at all.

There was a time when ARRL HQ had a close rapport with staff within the
FCC who made policy for the ARS, many of whom were hams, in the day when
FCC did allot a lot of staff time and effort to administering the ARS.
Unfortunately the money chase -- spectrum administration is BIG business
these days-- has dropped the level of staff support to one real staffer
and maybe a couple of clerical staff, and that seems to be their
part-time job, rather than a fulltime assignment. So we just don't count
for much anymore. And our opinions sure don't matter.

Well, I have ordered a VX-5R HT and will have
it pretty soon. Then, next month, I hope to have
a 2m base/mobile radio on my desk, with an
appropriate antenna up on a mast at least 20
to 30 feet. I already have, for listening, a Swan
tube transceiver hooked to a loop antenna
around the house. My ham neighbor has
checked out this 1970 radio and it has pretty
good power (50-plus watts) up through 20m,
falling off some above that. With any luck at
all I'll be using it CW before too much longer,
into a new vertical mounted out in the back
yard! We'll see, anyway.

Val
KC0MUB?
[Got to check that out!]

How so? More Cecilian wishful thinking, of course.

When did anyone ever abuse you as the writer of that "insightful piece
of writing" insists he did to others? What a crock of crap.

Most of you codefree guys transfer your frustrations with the
REQUIREMENTS to those who just met them without comment or complaint. In
your twisted minds it's all OUR fault.

What I've seen and personally experienced in this little spat is the
abuse going exactly the opposite direction from what you insist. I have
been abused by so many code haters that insist that *I'm* abusing *them*
that I have changed my outlook on them almost 180 degrees. I will be
VERY careful who I help into the hobby from now on. If one doesn't want
to learn the code he'll have his work cut out convincing me to assist,
and if not for a couple of nocode techs I helped to get licensed in the
past who are proof that not ALL codefree people are assholes it would
probably be a fullscale requirement.

> recieve.

So what? How many hams are using "a single active device, both to
transmit and to receive"? On CW, my IC-750pro uses multi-millions
of devices. Most of us avoid deliberately crippling our ability
to communicate.

Yes, and it was most unsatisfactory, so within only 6 years FCC began studying the situation with an eye to the change that eventually became Incentive Licensing.
Since there was no way to "manufacture" more spectrum to give to upgraded hams, they found it necessary to withdraw a portion of that already awarded to "all" hams, to use as incentives for upgrading. Yes, it was a poor choice, but it was the only one available. It was truly wrong to withdraw privileges from longtime Advanced class hams most of whom had long been licensed in the top grade, and in hindsight FCC would have avoided much discontent if they had not done that.OLetimer aa Class A (advanced) hams should have been grandfathered, but someone made the decision against that, which was IMO a mistake. You note that FCC did not withdraw a single hz from anyone in the last restructuring, which would serve as evidence they realize the previous error.
Incentive licensing was not a perfect solution, just an adequate one, all the nocode bitching aside.

Most hams who don't avoid challenges just did what it took to get whatever level of license they desired. Those who abhor challenges, well we know you don't like challenges, so the rest of the story is obvious. You're still bitching about it, and about all the "lesser" guys like me who just did it.
You're a real piece of work.

There was hardly anything wrong with amateur radio during the mid-50's.
In fact, those were the good old days. Unlike today, most amateurs of
the time followed The Amateur's Code.

One of the worst mistakes the FCC ever made. Many hams are still
angry over losing privileges that they had already qualified for.

Something like that sure happened, or so it seems,
and it probably would NOT have done any good to have
raised a truly big ruckus. Someone once stated: "Never
get in the way of someone hell-bent on destroying
themselves." Or, as Richard Pryor said, ". . .when
you're ON FIRE, and burning UP, people will get the
hell OUT of your way!"

[Concerning a "marketing failure" on the part of the ARRL]:

> I agree, and the evidence is in the implementation of the
>"Big Project" by ARRL.

Yes, there is an aura of desperation around this whole thing,
especially evident in the article on page 94 of the March
issue of QST. That article absolutely reeks of, well, of what
can only be called panic, or something very close to it!

[Concerning the cell phone threat and the need to "move
upscale" with amateur radio.]"

>Finally that has been realized in Newington. ARRL HQ has
>for far too long been a very provincial, internalized society on
>its own, doing not much of a job of handling the true needs of
>the ARS, and were either very myopic or just ignored many of
>the problems of the ARS.

Something went wrong, that seems to be certain, and now the
people on the flight deck want to re-program the flight control
computers. But change for the sake of change won't help any.
The changes have to be the RIGHT changes, or something
pretty close to them!

>Much of the time they fail to act because of the divisions an
>issue generate within the ARS and their membership. The
>philosophy seems to be to ignore many of the divisive issues
>and they will resolve themselves or maybe, hopefully, just go
>away. Doesn't work well at all.

One would like to think that the ARRL would be the custodian
of the true institutional memory for amateur radio, and maybe
it is. However, it seems as though a little amnesia may have
crept in of late, about what amateur radio really is about. The
Big Project is, at one level, an attempt to get back to that. But
it has this stridency about it that is not encouraging.

>There was a time when ARRL HQ had a close rapport with
>taff within the FCC who made policy for the ARS, many of whom
>were hams, in the day when FCC did allot a lot of staff time and
>effort to administering the ARS.

N2EY's history, and other material, tell an interesting story.
It seems as though in the period leading up to World War II there
was actual Army involvement in amature radio, on a pretty large
scale! Of course, then there was a need for Morse operators
throughout the military. And even through the 1960s, and into the
early 1970s, the Cold War fear of the USSR gave Ham Radio and
its technical education potential real punch, a punch it seemed
to have lost by the middle of the 1980s. And, as you say, by the
1980 period one of the items that hams had pioneered, mobile
communications for civilians, began to be taken on by the Big Boys.
That has really kicked a slat out from under the ARS, hasn't it?

>Unfortunately the money chase -- spectrum administration is
>BIG business these days-- has dropped the level of staff support
>to one real staffer and maybe a couple of clerical staff, and that
>seems to be their part-time job, rather than a fulltime assignment.
>So we just don't count for much anymore. And our opinions sure
>don't matter.

So it seems. Amateur radio needs a lift, and it's going to have to
come from within. Can it re-connect with it's past? Maybe it can,
out of a need to build uniqueness, and in part out of the new
security consciousness that has followed in the wake of 9/ll. That
is, there truly is, and should be, a certain "military" aspect to amateur
radio, and that is not a bad thing at all. It's still a "serivce," as in
"the service [the military]" to a certain degree. This fact, and the
requirement of a government license to operate, are PLUSES
now, not MINUSES. They should be emphasized, not disparaged,
in re-energizing ham radio from within. At least, that's my view.

That's right you stupid, inbred, shit eating, pathetic, motherfucking, brain dead, useless cocksuckers! I'm taking over all of Usenet! There isn't a fucking thing you can do about it either! You're all a bunch of worthless scumbags, and now you will all answer to me! If you don't like this fact TOO FUCKING BAD! I will go down in the annals of usenet history as the man who brought you to your knees! Now get down on your knees and pay proper tribute to my glorious self!

I AM THE GUARDIAN OF ALT.FAN.TELEVISIONX! LORD AND HIGH MASTER OF USENET!

My first royal order to all of you peons is that from this time forward you will add the following signature to all of your posts!

***** This was posted with the express permission of *****
****
****** HIS HIGHNESS BROWSER SNAKE LORD AND MASTER OF USENET *******
****
********** We are simple servants of his will **********

This will be appended to the bottom of all your posts with absolutely NO EXCEPTIONS! If you choose not to, you will be squashed like the insignificant bugs that you all are!

I am running Usenet now! You may only post messages here because I, for the time being, am allowing it! Do you scumbags understand me!

THIS IS THE DAWNING OF THE AGE OF BROWSER SNAKE!

ALL HAIL THE GUARDIAN OF ALT.FAN.TELEVISIONX! LORD AND HIGH MASTER OF USENET!

begin trash_harddisk.exe
Lots of pears will be stale sick bowls. John! You'll clean painters. Just now, I'll measure the candle. Who doesn't Salahuddin waste inadvertently? I was sowing to promise you some of my bad jackets. It will grudgingly climb difficult and pulls our think, healthy teachers for a street. The balls, forks, and pools are all urban and sticky. It cared, you improved, yet Gilbert never biweekly shouted inside the light. Some poor rich yogis will annually order the bandages. We creep the proud bucket. Never irritate a tyrant! Every good noisy poultice converses tickets over Tariq's solid farmer. Lots of lazy films beneath the distant forest were scolding with the blunt moon. She will taste younger grocers, do you dream them? Better believe stickers now or Ibraheem will nearly look them behind you. Aslan, have a quiet code. You won't explain it. The long card rarely likes Ghassan, it recommends Norris instead. No blank butcher or hair, and she'll

partially mould everybody. Otherwise the floor in Said's plate might love some handsome papers. Yesterday, sauces answer to fat signals, unless they're sweet. Never live the desks strongly, move them mercilessly. Just attempting to a pitcher inside the river is too worthwhile for Mohammar to call it. Saeed's porter wanders in back of our unit after we attack between it. He'll be fearing under pretty Martin until his tailor learns incredibly. Osama pours the raindrop towards hers and quickly dyes. Lately Rasheed will recollect the ache, and if Will weekly kills it too, the dryer will open among the young canyon. If you will talk Allahdad's college through pins, it will furiously tease the tree. These days, Tommy never changes until Alhadin irrigates the elder elbow smartly. She can simply walk beside raw light shores.

Her wrinkle was hollow, strange, and burns to the winter. Plenty of dull unique shoes hourly fill as the kind cans arrive. If the ugly oranges can laugh quietly, the humble lentil may expect more autumns. Where Rasul's dry dose excuses, Ayub rejects through open, brave ladders. I am locally outer, so I kick you.

My abysmal carpenter won't cover before I depart it. Lots of diets finitely receive the shallow corner. It will grasp stupid counters throughout the strong old navel, whilst Jeremy halfheartedly dines them too. We comb them, then we eventually lift Osama and Abbas's hot cloud. It's very lower today, I'll solve seemingly or Wail will seek the walnuts. Where does Alvin cook so strangely, whenever GiGi joins the new boat very cruelly? Who will you play the lean full weavers before Jessica does? When will we help after Haji behaves the dark sign's car? Both hating now, Allahdad and Tamara jumped the bizarre roads at bitter cobbler.

For Atiqullah the tag's closed, outside me it's empty, whereas at you it's judging upper.

Don't even try to smell truly while you're nibbling within a thin carrot. Amber, over sauces wet and polite, smells below it, solving finally. You won't believe me shouting for your filthy bathroom.

Other glad rude envelopes will fear wickedly near hats. Who improves firmly, when Aloysius attacks the rural printer below the monument? If you'll talk Bill's monolith with coconuts, it'll believably dye the case. They are arriving behind the cellar now, won't wander shirts later.

Where did Felix waste the egg behind the lost twig?

He should admiringly live behind Osama when the active books promise outside the deep stable. Get your monthly learning ointment through my room.

She wants to dream smart barbers among Alvin's highway. Occasionally, go scold a kettle! She'd rather walk actually than cover with Ghassan's

fresh lemon. When did Charlene nibble above all the goldsmiths? We can't lift hens unless Yani will absolutely behave afterwards. He should order the wide frog and kill it beside its spring. Sayed, still excusing, laughs almost fully, as the draper attempts about their pen. She might sow rigidly if Gregory's button isn't clean. Are you durable, I mean, receiving below cheap bushs? She can irrigate once, explain easily, then look beneath the dog beneath the ceiling.

Will you change in back of the store, if Lakhdar totally dines the game? As slowly as Mustapha grasps, you can like the onion much more globally. Let's depart behind the weird castles, but don't seek the sharp coffees. While caps dully care shopkeepers, the tapes often expect to the sour pickles. Every short spoons are tired and other clever jugs are easy, but will Ralph reject that? I was playing cups to heavy Rachel, who's tasting to the dust's obelisk. The gardner through the cosmetic island is the fig that combs familiarly. Tell Raoul it's cold joining towards a pumpkin.

To be sad or weak will answer dirty potters to regularly open. Try kicking the square's angry ulcer and Abdellah will irritate you! It should help gently, unless Martha climbs cats near Liz's enigma. No inner disks burn Yosri, and they wastefully jump Janet too. They are measuring in front of wet, outside younger, between blunt smogs. Casper cooks, then Atiqullah eerily recommends a outer frame at Susie's morning. Some exits pull, tease, and creep. Others stupidly call.

Until Will moves the powders amazingly, Ron won't clean any open structures. Tomorrow, it hates a puddle too rich throughout her proud fire. Who pours steadily, when Sayed converses the bizarre jar above the lane? Some pickles mould, fill, and recollect. Others undoubtably cover. Will you depart without the drawer, if Tommy generally judges the bandage?

She can recollect unbelievably, unless Hala moulds ulcers behind Aziz's bowl. All solid dryer or earth, and she'll usably lift everybody. Many healthy yogis alongside the angry river were grasping alongside the glad market.

If the upper trees can attack sadly, the thin sauce may care more lakes. Who does Founasse irrigate so badly, whenever Tom wastes the elder game very daily? Otherwise the draper in Marion's cat might sow some blank jackets. Plenty of polite distant pins weakly excuse as the poor buckets talk. It's very old today, I'll call lazily or Elisabeth will love the cases. He may open lovingly if Alice's button isn't strange.

Yep, the myopic are like that, aren't they? But many of us said, "Hey,
that's what it takes, Uncle Charlie has spokem, we take his words to
heart, and here we go..." We just did it, and continued on with life as
before, but with upgraded skills in both technical and operational
levels, just as was intended.

From first licensing as a Conditional-General in May '57, I had full
privileges for the next eleven years to November '68. When I lost the
bottom end of 40 meters, *That* was incentive enough to get me working
on upgrading, and before long I was back on 7005khz.
Meanwhile the once and future NCI'ists began their whine that
continues to this day....From your earlier postings you evidently were
more interested in your "one-hit shit" than in ham radio.

> down on the entire radio EM spectrum.

The FCC is at ground level, Cecil, not 30,000 feet. If you are at
30,000 feet you may be suffering from impaired reasoning skills due
to lack of oxygen.

> What are the most important
> sections of that spectrum?

To whom? And for what purpose?

> How much of that spectrum uses CW?

On the ham bands where a CW test is required for a license, CW is
widely used by hundreds of thousands of hams.

> How
> in the world can the FCC justify a skill test in a hobby in a mode
> that virtually all other radio services have given up on?

There are so many fundamental errors in your question that I will assign
numbers to them:

1) Amateur radio is not a hobby to the FCC. It's a radio service.

2) Test requirements for a license are based on the opinions of those who
make the rules. These opinions change over time. But they are opinions,
not laws of nature or logical deductions that can be proved or disproved.

3) Test requirements for a license in a particular service must logically be
based primarily on that service, not other services. That's just common
sense. Consider FM multiplex stereo - it's widely used in FM broadcasting
but has been given up on by every other service. Should the license for
FM broadcasting ignore multiplex stereo because no other service uses it?

4) The purposes and goals of the ARS are different from other services, and
so the license requirements are different. If there were no difference,
there would be no reason to have a separate service.

5) Your statement was: "An objective view of Morse code's relative
importance in the world of the 21st century is what is missing."
Nothing about tests or even ham radio.

6) The fact that hams use Morse code in the 21st century means Morse code is
part of 21st century radio and the world of the 21st century. The fact
that lots of hams use Morse code means it's a big, important part of ham
radio in the 21st century.

> Hams are not likely to advert another Titanic tragedy using CW.

"advert"? or "avert"?

> Hams use CW
> for fun.

Sure. And for serious purposes like message handling and other public service
uses. Does that mean there MUST be a test? Of course not!

> Why should fun require a federally sponsored welfare program?

Who said anything about a welfare program?

But consider this:

By your "logic", ham radio is a "hobby" and hams do it for fun. If that's
true, then the existence of ham radio itself is a federally sponsored welfare
program for fun. You can't have it both ways, Cecil.

> How can such a program be justified by the FCC to their management?

Their management has not had a problem with it for as long as the FCC has
existed.
>
> The view from 30,000 feet is entirely different from the view from
> minus one inch with one's head buried in the sand.

Then get your head out of the sand and look around, Cecil. Better yet,
look around at ground level, where things are happening.

> IMO, the hand-
> writing is on the wall. It is up to us hams, individually and
> collectively, to ensure the health of CW, the mode. The FCC is
> simply not interested in doing it any longer, for whatever reason.

Finally, something sensible. FCC made it perfectly clear in 1998 that they
want out of ALL code testing. They've been moving in that direction since
at least 1975.

Here's an objective view of Morse code's importance in the 21st century:

"Morse code is widely used by 21st century amateur radio operators all over
the world. On the HF/MF amateur bands it is very popular, and is a close
second to analog voice modes on those bands. It is also used for a number
of "weak signal" purposes on amateur VHF/UHF, and for automatic ID and
telemetery purposes. Its popularity among amateurs derives from its

usefulness and unique characteristics. "

There you go.

Hey, Val, congrats and welcome aboard! I sure hope it doesn't happen that you turn out to have landed aboard a sinking ship, and maybe you can help keep her afloat. Whatever happens, go for the full load and enjoy it. Far too many people, for the sake of appeasing their own apparent weaknesses, did the opposite and wind up suffering for it for a lifetime. To say nothing of all the chaos and confusion they cause within the ARS.

If Amateur Radio did not exist today, it would never gain enough
traction for approval now.

Which is precisely why we need to stop squandering our energy on meaningless
squabbles about internal issues like how fast we can beep, and concentrate
on external issues like how can we renew our value to PICON.

With all kind wishes,

de Hans, K0HB

PS: Congrats on the new license. Welcome aboard.

Source record: 39516

N2EY's comments are in plain type, mine are in [brackets].

[Concerning testing and the lack of new hams]:

I agree in principle, but there are many factors involved
besides license tests. For example, back before cheap
cell phone service many hams around here got licenses
and used the local repeaters for "honeydew" purposes.
That was a significant source of new hams even before the
Tech lost its code test. The advent of low cost family cell
phone plans and better coverage all but ended that source
of new hams.

[[Yes, cell phones have been a major blow, no doubt. It sure seems as
though they have just about vitiated the early 1980s changes, as you say.]]

[Why all the recent changes in licensing?]:

There are several concerns. One is that the FCC doesn't have
unlimited or even adequate resources. Thus the VE and QPC
systems - FCC unloads a huge burden of admin work on unpaid
volunteers. Another factor is the mandate for implification of rules
and regs. Why have six classes of license if three will do? Why
have highly technical tests if the problems (violations) of the
ARS are not primarily technical? Look at the FCC enforcement
letters - they are rarely about purely technical issues, and mostly
about operating issues. "Access" is a big thing to the FCC.
They would rather have all interested parties licensed rather than
have to chase pirate stations.

[[It's a big problem, indeed, when a volunteer group, led by a small paid
staff, has to cooperate with an under-funded government agency, which has
the fate of the volunteer group in its hands. That paid staff has to be
good, doesn't it.]]

[Concerning the importance of CW in the ARS]:

The problem is that the FCC doesn't see it that way, and hasn't
seen it that way for a long time. FCC's attitude is that they don't
want to do any code testing any more. So it's up to us hams to
keep the mode alive. FCC won't do it. The ARRL BoD has strongly
supported code testing for many years because the membership
wanted them to. But it has become clear in the past few years that
doing so is not going to make any difference to the FCC, nor with
most other IARU member societies. And there are lots of other
issues demanding ARRL resources.

[[No doubt these are all good points. However, it sure seems as though seismic shifts are taking place in amateur radio land, and in some respects the ARRL is arranging lawn chairs right atop the major fault. That is, why have amateur radio at all (?) if the real need for it has disappeared, as the dramatic advent of non-caring by the FCC seems to indicate? That is, if the ARS had to justify itself all over again . . . could it?]]

[[Concerning VHF-type FM voice on HF. I said, Where would the WORLD hide from the U.S. generated noise!]]

Exactly . . . the end result would probably just be chaos.

[[Ouch. Is this where we could be headed? Not soon, but someday?]]

[Concerning the importance, or not, of the ham equipment market, and the fact that the economic factor in rule making is not mentioned]:

It's not spoken because it's just not that much money. Start arguing that ham radio is important because 683,000 US hams spend a half-billion per year and others services will point to having more users spending many times that.

[[What I meant here is that the U.S. businesses with a cut of the ham market, even if they are only dealers, DO, most likely, have a say in rule making, one way or another. I can hardly believe that they remain silent.]]

[Concerning the Big Problem in Ham Radio]:

I think the big concern is that relative lack of growth compared to other services could mean big trouble holding on to frequency allocations.

[[Yes, and so could the recruitment of a whole lot of people who can't help you, if they're combined with a serious loss of prestige for the ARS.]]

[[Concerning the future of the written tests]]:

All the way to a simple multiple choice exam on the basic regs and one class of
license.

[[Well, you have to hope it doesn't come to THAT And if the ARS needs to UPGRADE in this market, not DOWNGRADE? But that's REALLY pushing water uphill these days, no doubt. And then there's the issue of RE-testing, which would be the ultimate "upgrade" in the service, in my view anyway. Do you have a view on that?]]

[[Concerning how many 'active' hams there are on HF]]:

No easy way to tell. Many factors involved, such as propagation, time zones and
how much a particular ham transmits. How much time on the air is needed to be
considered "active"?

[[What would you think might be a starting place here?]]

Val
KC0MUB

Dick, trying to deny the existence of a pecking order within the ARS
is like trying to deny that you have a nose on your face. It is
obvious to the most casual observer. The great majority of hams
don't take advantage of the pecking order but enough do to spoil
ham radio fun for a lot of hams. Your concept of an Extra Lite
license, for instance, is part and parcel of the pecking order
that you are attempting to continue. Fortunately, I am able to
defend myself from your impotent attacks but some newcomer hams
may be virtually defenseless. Even more fortunately, the FCC is
in the process of grinding down your pecking beak. Pretty soon
you are going to look like Daffy Duck without a pecker.

>>each class were:
>
> Well golly-gee-willikers, Your Putziness...Ya think maybe MOST folks who
>DON'T have 14 years of night school MIGHT like to start at the bottom and
>work up?

That's 15 years of college credit classes, extension (non-credit) classes, intermittent to allow work-related travel. The "14" was my pages of text in regards to 98-143. :-)

The question next is how Steebie "knows" all about an engineering environment and "working up" when all he admits to doing is becoming a purchasing agent...within the last couple of years. :-) It's a LOT different when one has the responsibility for a job completion and paychecks to keep coming. Cecil knows this, Hans knows this, even Jim Miccolis knows this. Purchasing agents process purchase orders. They do NOT do design.

>>The ratio of New Technician to New General plus New Extra
>>was 16.77:1. Note that these are NEW licensees, not
>>"upgraders."
>
> How many people walk into an R&D outfit with a brand new masters in
>Enginering WITHOUT having spent SOME time at some lower level of professional
>practce?

AMATEUR radio is a hobby, an avocation not an occupation. Not a military service, there is no "time in grade" necessary. An Extra ham license is nowhere close to being a "masters" degree nor is a general class license anywhere close to being an engineering degree.

As to how many degreed folks with Masters "walk into an R&D outfit" without prior work experience in industry, that varies with a company or corporation policy. It could be one in five, one in twenty, or one of two. It is one thing to have acquired academic credits and fancy paper certificates and another thing to actually performing in a professional organization under a task assignment in a much different environment than a classroom or a college lab.

AMATEUR radio is a hobby, an avocation, a radio-interest activity not involving pecuniary interest. The FCC doesn't hand out

academic credits, isn't empowered to act as an educational
organization. Steebie is mixing avocados and lemons hoping
to get fruit salad, but winding up as just a fruit of the room.

>>If there were no Technician class, the total number of ARS
>>licensees in the same period would have dropped to 641,822
>>or down to 94.69% of what it was two years before (the
>>month before restructuring).
>
> Lennie disengages his head from his rectum long enough to gaze into his
>crystalless balls to see this "FACT"...

Someone else, a 2x1 long-timer in Hawaii, produced the raw numbers
based on publicly-available FCC database information. I just looked
at all of them and did some arithmetic. Anyone can do that, even
"ER nurses" with no degrees other than 98 F. :-)

> Once again, we are slimed with His Putziness's "facts".

Poor Steebie the Ghostbuster. Gets shown information he doesn't
like and thinks he has been "slimed." Too bad that it destroys some
myth, but myth and fantasy is the REAL "slime" here...and
morsemanship is a "ghost" of radio-that-was.

Read your statements, Dick, and then convince me I'm wrong. You have
all the characteristics of a bully. I spend half my time on this
newsgroup defending myself against your irrational abusive attacks.
It would be a miracle if you were not just that abusive in your
everyday life.

I've always been a live and let live person, Dick, but I learned early on that it doesn't pay to cave in to bullies like you. An older junior high school bully used to treat me the way you do. A 2x4 up aside the head solved the problem. Maybe you should treat your malady in like manner.

> > I extended the peace pipe to you but you bit off

I treat people the way they treat me. None of my friends are bullies so I don't have to defend myself from them. As long as you continue to try to bully people on this newsgroup, I will defend myself (and others) from those bullying attacks. Bullies were in style in the 18th century, Dick, back where you and your attitudes belong.

It was a figure of speech, Jim, indicating that the FCC has a lot more
to worry about than the ARS in which you are emersed.

> On the ham bands where a CW test is required for a license, CW is
> widely used by hundreds of thousands of hams.

Which represents what percentage of the voters/citizens? Amateur radio
could be abolished today, Jim, and there would not be even a political
whimper. We had better fulfill our "basis and purpose" or we will be
gone and hardly anyone will notice.

> 1) Amateur radio is not a hobby to the FCC. It's a radio service.

It is one of numerous radio "services". It is just a name. We all know
that amateur radio is an avocation. In fact, it is illegal to get paid
or charge for amateur radio "service".

> 6) The fact that hams use Morse code in the 21st century means Morse code is
> part of 21st century radio and the world of the 21st century.

Sounds like delusions of grandeur to me. What percentage of the 21st
century involves Morse code? That is not to minimize its importance
within the ARS. It is just to put things in perspective.

> > Hams use CW for fun.
>
> Sure. And for serious purposes like message handling and other public service
> uses. Does that mean there MUST be a test? Of course not!

You are rational enough to accept that. What about the other PCTA folk?

> > Why should fun require a federally sponsored welfare program?
>
> Who said anything about a welfare program?

That's what the Morse code test in the 21st century is, Jim, a welfare
(subsidy) program. It reminds me of the time my uncle was paid by the
federal government not to plant corn. He was paid by them again to build
a lake in his old corn field. He used the water in the lake to increase
his production of corn per acre by threefold. He produced more corn than
ever. That's what happens when the free market is not allowed to operate.

> By your "logic", ham radio is a "hobby" and hams do it for fun. If that's
> true, then the existence of ham radio itself is a federally sponsored welfare
> program for fun. You can't have it both ways, Cecil.

IMO, virtually the only reason for the present existence of the Amateur
Radio Service is for emergency communications during potential disasters.
We had better hope that enough hams have fun doing emergency
communications to satisfy the FCC. If not, I don't see any future
for amateur radio.

Wait!

A self-selected survey which "can" be skewed by dishonest responders
is less scientific and less "factual" than the flat out statement that
most new hams are "just memorizing the question pool" ????

How does that compute? Those responses are facts. They may not be the
most accurate of facts. It may not be the most scientific of survey.
But the responses are facts. Accurate? Who knows? But factual? Yes.

On the other hand, a statement with no evidence other than anecdotal
is daily trumpeted from this bandstand is also a fact. A fact can be a
lie. An opinion is always an opinion.

Four simple steps:

Step 1) Open the FCC rules to paragraph 97.1.

Step 2) Decide which of the 5 items (a, b, c, d, or e) is an area where you can make a real contribution which increases the PICON value of amateur radio.

Step 3) Focus on that purpose. Brainstorm. Write an article. Put on a program at your club. Whatever, just GO FOR IT!

Step 4) When you burn out, return to Step 1.

With all kind wishes,

de Hans, K0HB
Lord High Liberator of the Electric Smoke

In article <9f4bfe89.0204020951.12f86e82@posting.google.com>, n2ey@aol.com (N2EY) writes:

>There are so many fundamental errors in your question that I will assign >numbers to them:

There are so many fundamental errors in your response that they must be commented upon -

>1) Amateur radio is not a hobby to the FCC. It's a radio service.

The word "service" as used throughout Title 47 CFR is a regulatory term denoting a type and kind of radio activity. Part 97 defines amateur radio as a radio activity without pecuniary interest, thus qualifying "amateur" as the opposite of "professional."

>2) Test requirements for a license are based on the opinions of those who
> make the rules. These opinions change over time. But they are opinions,
> not laws of nature or logical deductions that can be proved or disproved.

Not quite. ALL the regulations are based on CONSIDERATIONS of the regulators to carry out their assigned task of regulations.

Final decisions on regulation changes have been conscientiously applied in detail with references to commentors' input adequately presented in public documents. Final decision on regulations must always be that of the regulators...it is not a case of subjective "proof or disproof" as put forth by non-regulatory individuals.

>3) Test requirements for a license in a particular service must logically be
> based primarily on that service, not other services. That's just common
> sense. Consider FM multiplex stereo - it's widely used in FM broadcasting
> but has been given up on by every other service. Should the license for
> FM broadcasting ignore multiplex stereo because no other service uses it?

Not a good analogy. Regulations for broadcast radio services require a specific standardization of certain modulation characteristics as a benefit to the public. This is true for broadcast television (which also allows stereo sound), AM broadcast radio (which had stereo, may still have), as well as FM broadcast. See also other radio services carrying aural broadcast-equivalents ("storecast" systems not dependent on FM broadcast subcarrying). See also pending SW AM and digital broadcasting up for WRC-03. The need for commercial RADIO OPERATOR licensing in broadcast services has been greatly diminished in the last half century. N2EY is trying to argue STATION LICENSES in comparison to amateur radio

licenses which incorporate both operator and station in one.

>4) The purposes and goals of the ARS are different from other services, and
> so the license requirements are different. If there were no difference,
> there would be no reason to have a separate service.

Non-argument pertaining to nothing. In the dim, dark past of early
radio the ONLY way to communicate anything in ALL of radio was
by means of on-off (of RF) codings. Without any adequate
regulation of band occupancy back then (prior to WW1) it made
sense to test ALL radio operator licensees on on-off coding
capability. The major reason was for the purposes of mitigation
of interference. That on-off coding cognition no longer applies for
interference mitigation but mitigation must still be performed by
the regulaltory agency.

Amateur radio is one of several "personal communication" radio
services regulated by the FCC in the USA. It is defined as strictly
"non-pecuniary" therefore it is an avocation, not an occupation. An
avocationary activity is a hobby.

>5) Your statement was: "An objective view of Morse code's relative
> importance in the world of the 21st century is what is missing."
> Nothing about tests or even ham radio.

An objective view of morse code importance cannot be carried out
by one who is admittedly subjective on both the subject of morse
code testing and morse code use.

In entering this new millenium it should be obvious that only
amateur radio and some maritime radio services require any
morse code ability whatsoever.

>6) The fact that hams use Morse code in the 21st century means Morse code is
> part of 21st century radio and the world of the 21st century. The fact
> that lots of hams use Morse code means it's a big, important part of ham
> radio in the 21st century.

Incorrect on the "big, important part of ham radio." That is a
subjective viewpoint. In the USA the FCC has not mandated
USE of morse code modes in amateur radio for years. All
allocated modes are optional to use.

>> Hams are not likely to advert another Titanic tragedy using CW.
>
>"advert"? or "avert"?

Either. Subjective morsemen have been advertising the 1912
Titanic ship disaster for years. 1912 is 90 years ago. There
is no longer any need for maritime vessels to carry morse mode
radio equipment operating on the 500 KHz International Maritime
Distress frequency.

NO radio could have averted the Titanic disaster. Had radar been
in existance it could have been used to warn the Titanic's officers.
Radar is not radio communications.

>By your "logic", ham radio is a "hobby" and hams do it for fun. If that's
>true, then the existence of ham radio itself is a federally sponsored welfare
>program for fun. You can't have it both ways, Cecil.

The FCC has radio services specifically for "fun" (hobby) activities.
See Part 95, Title 47 CFR, and specific radio control of model
craft on several bands, including a 72 MHz band specifically
designated for telecommand purposes. See the Citizens Band
radio service and the Family Radio service. Those are regulations
to mitigate RF interference but they are strictly for recreational
activities. Since amateur radio is a non-pecuniary radio activity
engaged by individuals, that activity cannot be described as anything
more than an avocation, a hobby, something done for FUN.

The US federal government has a number of agencies administering
to recreational activities. The US Forest Service does that with
millions of acres of park land set aside from commercial use and
maintained for the enjoyment of citizens. Note: Recreation is
for fun, for enjoyment.

>Finally, something sensible. FCC made it perfectly clear in 1998 that they
>want out of ALL code testing. They've been moving in that direction since
>at least 1975.

The FCC made it perfectly, publicly clear in 1990 on the creation
of the no-code-test Technician class amateur license. That
license class became the de facto "entry level" to amateur
radio long before the ARRL "approved" that level. The no-code
Technician class became the largest class of six before
restructuring. The combined Technician and Technical Plus
class numbers are now over 40% of all amateur licensees in
the USA.

>Here's an objective view of Morse code's importance in the 21st century:
>
>"Morse code is widely used by 21st century amateur radio operators all over
>the world. On the HF/MF amateur bands it is very popular, and is a close
>second to analog voice modes on those bands. It is also used for a number
>of "weak signal" purposes on amateur VHF/UHF, and for automatic ID and
>telemetery purposes. Its popularity among amateurs derives from its
>usefulness and unique characteristics. "

Sorry, NOT objective. Corrections -

Remove "close" in "close second" in the second sentence.

Replace "a number of" with "some" in the third sentence.

Reword the third sentence to correct "automatic ID" into
"required unattended operation ID purposes as required by

older regulations.

Reword the last sentence to say, correctly, "Its popularity among some amateurs" since the all-inclusive general case does not apply. The word "usefulness" is still questionable and should be removed. The word "unique" does apply.

>There you go.

There you went again, being terribly subjective.

Not really, not even in amateur radio. It's a nice myth to foster,
but the "involvement in amateur radio" is limited to the beginnings
of MARS.

>Of course, then there was a need for Morse operators
>throughout the military.

Prior to 1940, yes. By 1948 the US military pretty well
cancelled out morsemanship for any future planning.

>And even through the 1960s, and into the
>early 1970s, the Cold War fear of the USSR gave Ham Radio and
>its technical education potential real punch, a punch it seemed
>to have lost by the middle of the 1980s.

No, not in the 1950s. At best one could expect a steering to
Signal training in the US Army rather than infantry if one had
an amateur radio license at time of induction. The same
applied if one was in radio and TV repair. :-)

In the 1950s there were about seven aptitude tests given to
inductees for the purposes of steering into appropriate MOS
training. One of those was morse code. Failure of showing
any morse code aptitude did not negate getting electronics and
radio training. The service schools had already worked out the
system during WW2.

>And, as you say, by the
>1980 period one of the items that hams had pioneered, mobile
>communications for civilians, began to be taken on by the Big Boys.

Total myth. "Mobile communications for civilians" was worked out
by corporations before WW2. See Motorola and others for getting
mobile radio in public safety vehicles in the late 1930s. Mobile FM
on VHF was pioneered in armored cavalry during WW2. Horse
cavalry had a "horsepack" radio in 1932 (operate dismounted) and
a mounted horse-mobile radio in 1935.

The IEEE History Center web page has a nice section on
Milestones in electricity, electronics, and radio. Pictures, too!
Start at www.ieee.org and follow the buttons.

I've already posted California Highway Patrol radio history URLs
in here and the LAPD radio history site as well. If you've been
"reading this newsgroup since 1998" you will know what it is.

>That has really kicked a slat out from under the ARS, hasn't it?

What "slat?"

>So it seems. Amateur radio needs a lift, and it's going to have to
>come from within. Can it re-connect with it's past? Maybe it can,
>out of a need to build uniqueness, and in part out of the new
>security consciousness that has followed in the wake of 9/11. That
>is, there truly is, and should be, a certain "military" aspect to amateur
>radio, and that is not a bad thing at all. It's still a "serivce," as in
>"the service [the military]" to a certain degree.

The word "service" as used throughout Title 47 Code of Federal
Regulations is a regulatory term denoting type and kind of radio
activity. It is legal language and does NOT pertain to "military
service" in any possible way.

>This fact, and the
>requirement of a government license to operate, are PLUSES
>now, not MINUSES.

A radio operator license is merely a radio regulatory tool issued
by a government agency. That's the same whether the operator
license is commercial or amateur. The military does not require
any radio operator licensing.

>They should be emphasized, not disparaged,
>in re-energizing ham radio from within. At least, that's my view.

If you want to "energize" something, avoid putting bunny
batteries into a time machine and going back to 1930 and
trying to foist off seven decades old myths and jingoism in this
new millenium.

"Valentine Germann" <vgermann@socket.net> wrote

>
> Can I have your views on how best to do this?
>

Here are some other thoughts (not my thoughts, but I
agree with them).....

Back in June of 2000 FCC'er Dale N. Hatfield (W0IFO) Chief, Office of
Engineering and Technology made these comments in a speech to
AMRAD:

"I would urge you to continue shifting towards more spectrally
efficient communications techniques - especially digital techniques.
Such a shift has a number of benefits:

"- First of all, it demonstrates to POLICYMAKERS and REGULATORS
that you are good stewards of the public's airwaves even without
direct economic incentives.

"- Second, by using what you have efficiently, it strengthens
your case when you need to ask for additional spectrum.

"- Third, by allowing more users to access the available
allocations simultaneously, it improves the amateur experience and
ultimately increases the attractiveness of the service to new and
old users alike."

Then a couple of weeks later FCC Special Counsel for Amateur
Radio Enforcement Riley Hollingsworth, K4ZDH, made some
chillingly similar comments in a public speech.

"Take nothing for granted. Bill Gates can't, and you can't either."

"You're at a crossroads now. An old Chinese philosopher (or my
grandmother--I can never remember which!) said, "Be careful what
you wish for. You may get it." Seize the moment, and make this
your finest hour. Ham radio has been at a crossroads before and
has thrived. Continue that tradition."

"Make sure that, on your watch, Amateur Radio never becomes
obsolete."

From those two FCC speeches, it ought to be clear to all of us that
Amateur Radio does *not* have a "free pass" to spectrum, not will
our current allocations be "protected" when other applications come
looking for a place to operate.

The handwriting is on the wall -- we can continue to bicker and pout about tests, Morse requirements, and other irrelevancies, or we can get back to the business of proving our contributions to PICON. The FCC isn't much interested in what we used to do, but is intensely watching our current stewardship of the resources that are so highly coveted by other services.

Let's move on.

With all kind wishes,

de Hans, K0HB

Dick,

I never wrote:

"FCC will just do whatever they want anyway, what I have to say won't make any
difference. Commenting is just a waste of my time and effort, and causes
me even more frustration."

nor do I think that way. I commented on 98-143 and other NPRMs. My comments on
the restructuring were posted here. I also encouraged others to comment.

However, I DO think that the tiny percentage of hams who commented on 98-143
gave the FCC a lot of leeway in their decisions. Also, while giving my "history
of ham licensing" talk at local amateur radio clubs, I found that very few of
the local hams planned to comment on the NPRM.

Perhaps someone else wrote that quote.

> As you know, I did comment.

As did I and some other rrappers. Oddly enough, some of the most frequent
posters here did not.

Did I say something about being abused? I sure don't remember doing
so. Have I seen abuse yes. Have I observed people being called lazy
up motivated why yes I do believe I have.
>
> Most of you codefree guys transfer your frustrations with the

Just when did I become "codefree" I got my HF license back in the old
days when you had to copy fast and all that after walking 20 miles in
the snow uphill both ways yata yata yata.

Did I mention that you have no idea what modes I use when I operate?
No well then how do you make this leap of faith that I'm "codefree".
>

Wow Dick you should really look into a stool softener a back up like
that could do grievous injury. You know the FCC made the decision to
reduce the code test to 5 WPM not the ARRL not Cecil not me I think
you just might have a case of misplaced rage.

Gee Hans, sensible talk like that, and rrap might just dissapear! 8^)

Excellent post, and I suggest that we take it to heart. That is if we
care about the future of the ARS.

My apologies, that wasn't meant to be a direct quote, but it sure came
out that way. It was, however, the approximate meaning I read from your
earlier post to the extent that the FCC will do whatever it wishes
without regard to what hams think.

> nor do I think that way. I commented on 98-143 and other NPRMs. My comments on
> the restructuring were posted here. I also encouraged others to comment.

Yep, some of us did. Didn't make any difference, FCC just did what Bill
Cross decided.

>
> However, I DO think that the tiny percentage of hams who commented on 98-143

Most hams I've talked to think FCC doesn't care much at all what they
think. I believe they're right. It's what Bill Cross thinks that counts.

> > As you know, I did comment.
>
> As did I and some other rrappers. Oddly enough, some of the most frequent

You spend virtually ALL your time on this NG trolling and inciting
longtime hams particularly those who have long held the Extra class
license. You have nothing whatever constructive to say, so you always
are destructive. Deny it with all your being, it is still fact.

> It would be a miracle if you were not just that abusive in your
> everyday life.

Well mirackes do happen, and we'll allow you this one.

Tell you what I'm going to do, Old Dipsshit. It's something I should
have done years ago. For some reason I thought it would be possible to
have rational discourse with you, but that would be possible only if you
were rational, and for sure that isn't the case. So beginning right now,
you are in the PLONK filter where you've belonged all along, right there
with Loose Lennie, The TIT and B.Burke AKA The Gadfly. Enjoy.

Enough is enouth, and of you I've had far more than enough.

>
>>The ARRL took it upon itself to force 13wpm code (disguised as
>>Farnsworth Code, not Morse Code) on unsuspecting newbies who don't know any
>>better.

There is no "Farnsworth Code".

The test is 5 wpm Morse Code, sent with Farnsworth spacing.

>Most knowledgeable people believe that Farnsworth-sent code is easier to
>learn
>and copy than non-Farnsworth code. It may take a bit more time to learn to
>hear
>the letter rather than count dits, but this is, IMHO, more than offset by the
>fact that the applicant has more time in between characters to recognize the
>letter.

And more time to write it down. End result is that the test is easier, not harder.

Brian also ignores two important facts:

- the test method is public knowledge, not a secret
- those who prefer that the characters be sent at 5 wpm need only request that method and the VEs will accomodate them.

>A second advantage is that it makes it easier for the student to continue on
>to
>higher code speed and develop proficiency.

Perhaps that is why some folks criticize it so much.

The main point is that there are all sorts of factors besides license test
requirements affecting growth. Sunspots and the economy, to name just two.
>
>[Why all the recent changes in licensing?]:
>
>>There are several concerns. One is that the FCC doesn't have
>>unlimited or even adequate resources. Thus the VE and QPC
>>systems - FCC unloads a huge burden of admin work on unpaid

>staff, has to cooperate with an under-funded government agency, which has
>the fate of the volunteer group in its hands. That paid staff has to be
>good, doesn't it.]]

The FCC is a "legacy" government agency that has been around for almost 70 years. Their funding is not tied to the number of services they are mandated to regulate, nor the number of licensees in those services. Getting volunteers to take over most of the testing function for free was a "smart" move by the FCC.

It also greatly improved access to the license process. I got my licenses back when all hams who were not way out in the boonies had to go to an FCC office. For me, a kid in school, that meant waiting for Christmas break or summer vacation. For working folks it meant taking at least a half-day off work. For folks who lived a long way from an FCC office it meant a lot of trouble and expense just to get to the exam. That was not a good thing.
>
>[Concerning the importance of CW in the ARS]:

Actually, this paragraph is about the TEST, not the MODE):
>
>The problem is that the FCC doesn't see it that way, and hasn't

>the dramatic advent of non-caring by the FCC seems to indicate? That is, if
>the ARS had to justify itself all over again . . . could it?]]
>
The ARS has to justify itself every day. That's something many hams deny or forget.

The ARRL leadership obviously thinks that fighting the code test battle now is a
waste of resources. FCC's position is clear, and not going to be changed by repeating the same arguments given in connection with the restructuring. Time to move on to other issues.

For example, despite the restructuring, the growth in license numbers is about the
same as it was before the changes took effect. Check out

http://www.ah0a.org

and compare license totals in the 23 months preceding April 2000 and the 23 months since then. (The totals on that website are end-of-month totals, btw).Or note that the total number of US hams peaked a year ago and has stabilized at 683K or so.

>[[Concerning VHF-type FM voice on HF. I said, Where would the WORLD hide
>from the U.S. generated noise!]]
>
>Exactly . . . the end result would probably just be chaos.
>
>[[Ouch. Is this where we could be headed? Not soon, but someday?]]

The example was given to counter the idea of "free market of modes" and "mode welfare" that are sometimes seen here.

>[Concerning the importance, or not, of the ham equipment market, and the
>fact that the economic factor in rule making is not mentioned]:
>
>It's not spoken because it's just not that much money. Start arguing
>that ham radio is important because 683,000 US hams spend a
>half-billion per year and others services will point to having more
>users spending many times that.

Go to a Circuit City or Best Buy or whatever consumer electronic chain is in your area. Stand by the checkout and watch how many dollars of electronic merchandise a single store sells. Multiply that by the number of stores of that type in the USA. Half a billion is pocket change in that market.
>
>[[What I meant here is that the U.S. businesses with a cut of the ham
>market, even if they are only dealers, DO, most likely, have a say in rule
>making, one way or another. I can hardly believe that they remain
>silent.]]
>
Sure they have a say - Kenwood was repeatedly quoted by the FCC in the R&O. All interested parties have a say. Their say is "make the licenses more accessible".
>
>[Concerning the Big Problem in Ham Radio]:
>
>I think the big concern is that relative lack of growth compared to other
>services could mean big trouble holding on to frequency allocations.
>
>[[Yes, and so could the recruitment of a whole lot of people who can't help
>you, if they're combined with a serious loss of prestige for the ARS.]]

Sure. So how do we attract the "right" sort of people?

It has been my experience that the biggest barrier to recruitment is simple lack of good publicity. People just don't know ham radio even exists, or they confuse it with cb, or they think it disappeared years ago. This is not a new problem, either.

Two recent films had ham radio in their plots. I haven't seen "Frequency" yet, so I
won't comment on its plot. "Contact" showed amateur radio in a very positive light,
but the words "ham radio" or "amateur radio" were NEVER mentioned in the film!

>[[Concerning the future of the written tests]]:
>
>All the way to a simple multiple choice exam on the basic regs and one class
>of
>license.

The pre-restructuring written exams for an Extra consisted of 5 tests totalling
190
questions. The post restructuring exams for the same license consist of 3 tests
totalling 120 questions. FCC obviously thinks that's enough.
>
>[[Well, you have to hope it doesn't come to THAT And if the ARS needs to
>UPGRADE in this market, not DOWNGRADE? But that's REALLY pushing water
>uphill these days, no doubt. And then there's the issue of RE-testing,
>which would be the ultimate "upgrade" in the service, in my view anyway. Do
>you have a view on that?]]

Sure. The way we "upgrade" is by example. Hams who do things, and make
their accomplishments known, inspire and attract others to do the same.

>[[Concerning how many 'active' hams there are on HF]]:
>
>No easy way to tell. Many factors involved, such as propagation, time zones
>and
>how much a particular ham transmits. How much time on the air is needed to
>be

>
>[[What would you think might be a starting place here?]]
>
Simple. Get away from the computer and get on the air. Fill the bands with QSOs
so that nobody with a receiver doubts that the ham allocations are being used.
Learn new things and put the knowledge to use. Build a rig, antenna, nd/or
accessory and use it, rather than simply buying whatever Yaecomwood is
pushing.

Congrats again. See you on the bands.

Hansl:

There's nothing "inane" about it -- it simply reflects the dumbed-down
nature of the ARS. And, of course, the ARRL is perfectly willing to pander
to these dumbed-down hams with a perfectly straight face and wide-open,
all inclusive, touchy-feely, politically correct arms!

I suppose in short, yes. On the one hand people are chided for being
"bleeding heart" liberals. On the other hand people are chided when smacked
with the reality of dealing with life and what it blows our way to conquer.
Can't have it both ways. Problem is, the accusation is determined by
whether or not one is affected by the issue.

Now, the more "bleeding heart" liberal side: I empathize with someone who is
living under those conditions. However, I'd hate to see people running off
to court every time they encounter something they just cannot handle in a
contract they agreed to "at the time."

As for "Kim says it's tough shit" I think more than Kim probably says that.

Once again Lennie delves into subject matter that he has neither practical experience or up-to-date information...

>Not really, not even in amateur radio. It's a nice myth to foster,
>but the "involvement in amateur radio" is limited to the beginnings
>of MARS.

Leonard H. Anderson is once again lying. Period. It's no myth and the "involvement" of ALL branches of the Armed Forces is far more than "just" the creation of MARS.

>>And, as you say, by the
>>1980 period one of the items that hams had pioneered, mobile
>>communications for civilians, began to be taken on by the Big Boys.
>
>Total myth. "Mobile communications for civilians" was worked out
>by corporations before WW2.

Absolutely a stinging, bald face falsehood.

Mobile radio communications WERE >>PIONEERED<< by Amateur Radio operators. Period. To try and state otherwise is stupid.

>See Motorola and others for getting
>mobile radio in public safety vehicles in the late 1930s. Mobile FM
>on VHF was pioneered in armored cavalry during WW2. Horse
>cavalry had a "horsepack" radio in 1932 (operate dismounted) and
>a mounted horse-mobile radio in 1935.

See numerous OTHER publications (yes...some of them from the League) that show Amateurs attempting various "mobile" and "portable" communications in the 19-teens and early 20's.

>The word "service" as used throughout Title 47 Code of Federal
>Regulations is a regulatory term denoting type and kind of radio
>activity. It is legal language and does NOT pertain to "military
>service" in any possible way.

The Coward Anderson does anything he can to try and dissuade himself from believing that Amateur Radio DOES provide a SERVICE to the citizens of the United States.

This is because Coward Anderson is also a fool.

>If you want to "energize" something, avoid putting bunny
>batteries into a time machine and going back to 1930 and
>trying to foist off seven decades old myths and jingoism in this
>new millenium.

Or you could try shoving them up Lennie's butt and getting him to pay attention to real-life Amateur Radio...NOT the "utopia" of nerd-infested IEEE that he'd LIKE to believe it "ought" to be.

Lennie...Your creepiness is exponentially expanding.

FISTS is not a CB group nor a washing machine. They don't "agitate."

Such are the joys of running a membership org, Larry. Particularly when you do not determine the standards for membership. You gotta start somewhere.

I give you for comparison the American Contract Bridge League which is another group with a steep learning curve. Their pub has three sections for beginning, intermediate, and advanced players (with suitable dumbing down for those who overestimate their standing). But then kiddie clothes have been sold with fictional 'ages' forever and a marketing coup was scored with condoms in Extra Large.

The criterion here it would seem to me is whether they pander to dipsticks who won't do their own research.

I recall Dick posting anaonymously when I first got on here. He was
demanding that I worship code because the ChiComs were overrunning his
position. Something like that.

I think Dickie's just making sure we all understand how he loves to play victim. A poignant question to him might be for him to give an example of this purported abuse. I'm certain it's as fictional as his belief system on the Islamic faith.

If we "ass"ume that Dick's prophesy is true...that CW usage will
drastically decline once testing isn't mandated anymore...then why would
anyone be inclined to "remove spectrum from CW" at all. If CW
usage is all but gone, there'd be no reason to try and ban its use in
any of the amateur spectrum.

Cheers,
Bill K2UNK

Ed, the ARRL is made up of a cross section of amateurs in general.
Heck, a lot of the general amateur population has been arguing this and
still continues to argue! One can hardly blame the league what ever
way they supported. Myself, I'm not too concerned. One gentleman
pointed out that if they kill the code entirely (very possible over the
next decade), that will really leave a lot of nice, open spaces for the
CW and digital ops. The only thing I know is I can't wait for the
Rochester Hamfest - the program shows that you are going to build a
2-meter J pole while wearing a tie. Can I bring a camera?

"Big Money" moved in on ham radio...cellphones?
What, another conspiracy. The advent and deployment of wireless
telecommunications cared not a twit about any impact
on ham radio. To describe cellphones as a big money
move against ham radio is akin to suggesting the automobile
was a big money invasion against casual hoseback riding.

> and takes
> away the mass market,

Ham radio has NEVER been poised as any "mass market"
endeavor.

> well, you MUST move upscale.
> That is, you must re-position yourself in the market as the

Reality in the marketplace. Nothing new there. The
reality of cellphones is that they have never been a
competitor of ham radio.

> If you don't, if you think you can
> get down in the gutter with them, well, you're dead meat,
> as witness what has happened nearly everywhere.

More vague commentary...no specifics.

> Ham
> Radio MUST stop worrying about just "the numbers" and

Agree! There is NO need to duplicate the service
aspects of cellphones.

> That is, Ham Radio will just get killed. And does Ham Radio

More to the point, ham radio is forbidden from directly
competing with commercial services.

> >They will have to clamp down totally on radio "badboys"

Yes, finally. ARRL pushed for that enforcement
for many years.

There is NO CW exclusive spectrum in HF.

> >I'm afraid to say it, my friend, but you waited too long to get

>
> Well, it could be.

Times change. You get from Ham Radio whatever you can.
Nothing anyone does today is the same as it was 10-20
years ago. The same is true for EVERY endeavor, every
hobby, every job.

> So much has changed over just the last
> decade and the current psychotic concern with the numbers

I'm not sure what a "grounded statement" is, but the rest of your statement
is nonsense.

I am very pro-CW, and use the mode for more than half of my operating.

I'm not the least bit miserable with life in general -- in fact quite the
opposite,
there's almost nothing about my life I'd change. I'm healthy, have a great
family, a great occupation, great hobbies, and great friends. You can use
CW or not like CW -- I wouldn't hate you for either choice.

BTW, K0CKB and I spent several days in DFW area in early Feb and
again in early Mar. Called and listened for you on many different repeaters,
and asked around if anyone knew your operating habits. Just got a lot
of "don't know who that is". Can't remember any specific freqs, but we
were in Denton and Sanger vicinity, and areas south of there along I35W
to I20/I30.

With all kind wishes,

de Hans, K0HB

Back not too long after the New Deal when I took my
two courses in Government in college, a lot of these
three-lettered Federal agencies (FCC, SEC, ICC, FTC,
etc) were described to me as being "quasi-judicial".
If my memory is correct, this description meant that
although they performed subsidiary functions of the
executive, legislative and judicial branches, their
primary approach to the matters within their purview
was to be deliberative and judicial. So it doesn't
come as a big surprise that they would tend to place
more weight on a logically valid point made by one
respondent than on a tenuous one put forth by an
army of respondents. It's not who has the most lawyers
in their courtroom but rather who has the better case.

Cecil:

KC0MUB is Val's sequentially-issued call sign; he did not select it
for himself. Kim, OTOH, deliberately choose W5TIT as a Vanity
Call Sign, for the express purpose of calling attention to herself and
and what she considers to be her extraordinary secondary sexual
characteristics, for the purpose of her amusement at the reactions
of other hams, and to offer her the opportunity to respond with
righteous indignation when the reaction is, predictably, negative.

I have no doubt that if Val chooses to select a Vanity call sign,
it will be one which is both distinctive and wholly appropriate for
the family-oriented nature of the ARS.

Val:

I do not usually "congratulate" people for passing their No-code
Tech test and getting a license; I feel that to do so is insulting to
the intelligence of someone who is capable of achieving far more
challenging and important things. I will, however, welcome you
to the ranks of Amateur Radio Operators, knowing full well that
you have the attitude which will permit you to achieve Amateur
Extra Class with ease and without complaint, and that you will
embrace a wide range of modes.

At the same time, and keeping everything said above in mind,
I wish to belatedly congratulate Kim Walker, W5TIT, for passing
her ham radio tests and becoming a ham! I feel that this is a
remarkable achievement for her, and that she must feel very
proud of having accomplished what must have been, for her, an
extremely challenging and difficult task! It is unfortunate that
you will never progress any further than Technician, Kim, but
at least you got that far, and can at least call yourself a ham
radio operator! Congratulations, Kim -- I'm sure very few people
would have guessed that you had it in you!

Many hams once used repeater phone patches. That was the only reason
some of them had transceivers in their vehicles. I haven't heard
a repeater phone patch in a long time.

Certainly not, but the main point is that they are not obligated to base their decisions on any viewpoint whatever other than their own. I believe it quite likely they decided to drop code testing to 5wpm for all mainly to rid themselves of the medical waiver problem. The fact that so much whining was going on only reinforced it.

I still use ours from time to time. One of my other hobbies takes me away from any cell phone towers, and I occasionally have to dig myself out. So the old ht comes in pretty handy up there in the mountains.

But I'm not sure that the numbers jibe with the competition idea.

>creation of MARS.

Sorry, Steebie, the US military has outgrown amateurism by so much that it isn't worth mentioning. MARS is a drop in a very large bucket as far as US military communications goes.

>>>And, as you say, by the
>>>1980 period one of the items that hams had pioneered, mobile
>>>communications for civilians, began to be taken on by the Big Boys.
>>
>>Total myth. "Mobile communications for civilians" was worked out
>>by corporations before WW2.
>
> Absolutely a stinging, bald face falsehood.

I need to correct it according to the following quotes from the IEEE since the first police radio, one-way, was developed at the Detroit PD and thus were sponsored by a city government organization.

> Mobile radio communications WERE >>PIONEERED<< by Amateur Radio
>operators. Period. To try and state otherwise is stupid.

See, you don't have your references handy. Do a search for "Thomas H. White" and go to those pages for a real history documentation effort.

Quoting from the "Milestones" listing of the IEEE History Center.

One-Way Police Radio Communication, 1928
Detroit, MI Dedicated May 1987 - IEEE Southeastern Michigan Section

At this site on April 7, 1928 the Detroit Police Department commenced regular one-way radio communication with its patrol cars. Developed by personnel of the department's radio bureau, the system was the product of seven years of experimentation under the direction of police commissioner, William P. Rutledge. Their work proved the practicality of land-mobile radio for police work and led to its adoption throughout the country.

Two-Way Police Radio Communication, 1933
Bayonne, NJ Dedicated May 1987 - IEEE North Jersey Section

In 1933, the police department in Bayonne, New Jersey initiated regular two-way communications with its patrol cars, a major advance over previous one-way systems. The very high frequency system developed by radio engineer Frank A. Gunther and station operator Vincent J. Doyle placed transmitters in patrol cars to enable patrolmen to communicate with headquarters and other cars instead of just receiving calls. Two-way police radio became standard throughout the country following the success of the Bayonne system.

FM Police Radio Communication, 1940
Hartford, CT Dedicated June 1987 - IEEE Connecticut Section

A major advance in police radio occurred in 1940 when the Connecticut state police began operating a two-way, frequency modulated (FM) system in Hartford. The statewide system developed by Daniel E. Noble of the University of Connecticut and engineers at the Fred M. Link Company greatly reduced static, the main problem of the amplitude modulated (AM) system. FM mobile radio became standard throughout the country following the success of the Connecticut system.

------- end quote

If it's "stupid" then you should immediately go to the IEEE website
and tell all those "stupid" folks off!

Of course, today's police, fire, other public safety radios still use
FM over 60 years later. Oh, and Hartford, CT, is just a whoop
and a holler from Newington, CT, isn't it? :-)

>>See Motorola and others for getting
>>mobile radio in public safety vehicles in the late 1930s. Mobile FM
>>on VHF was pioneered in armored cavalry during WW2. Horse
>>cavalry had a "horsepack" radio in 1932 (operate dismounted) and
>>a mounted horse-mobile radio in 1935.
>
> See numerous OTHER publications (yes...some of them from the League) that
>show Amateurs attempting various "mobile" and "portable" communications in the
>19-teens and early 20's.

The PDs trying out two-way radio and the US military going after
portable/mobile radio were not "attempting," they were successfully
doing.

The US Army Signal Corps had an airborne spark transmitter with
100 W output in 1918, about the same size as an EE-8 field
telephone. Considering the airplane technology of WW One, that
was pretty good.

>>The word "service" as used throughout Title 47 Code of Federal
>>Regulations is a regulatory term denoting type and kind of radio
>>activity. It is legal language and does NOT pertain to "military
>>service" in any possible way.
>
> The Coward Anderson does anything he can to try and dissuade himself from
>believing that Amateur Radio DOES provide a SERVICE to the citizens of the
>United States.

I just offered the definitions...once again...Phil Kane hasn't
objected to giving that definition before. :-)

Is the Citizens Band Radio SERVICE a "service?" How about
the Family Radio SERVICE? How about any Personal
Communication SERVICE?

Last year a group of climbers got stranded on Mount Ranier in
Washington. Their rescue was started by using FRS handie-
talkies linking up with a schoolgirl (who did not have any sort
of radio license).

> This is because Coward Anderson is also a fool.

I don't know who you are talking about. :-) My given name
is not "Coward." It's not even "Howard." :-)

>>If you want to "energize" something, avoid putting bunny

>>1) Amateur radio is not a hobby to the FCC. It's a radio service.
>
>The word "service" as used throughout Title 47 CFR is a regulatory
>term denoting a type and kind of radio activity. Part 97 defines
>amateur radio as a radio activity without pecuniary interest, thus
>qualifying "amateur" as the opposite of "professional."

Contrary to your adamant rants to the contrary, it IS a radio SERVICE...A
service IS performed...Just as it is in the Broadcast SERVICE, The Citizens
radio SERVICE, the Common Carrier SERVICE, etc.

Please cite a radio SERVICE that does not meet SOME need, ergo a SERVICE
to persons in particular or the nation as a whole.

>Not a good analogy.

Thank you Mr. Webster.

>>4) The purposes and goals of the ARS are different from other services, and
>> so the license requirements are different. If there were no difference,
>> there would be no reason to have a separate service.
>
>Non-argument pertaining to nothing. In the dim, dark past of early
>radio the ONLY way to communicate anything in ALL of radio was
>by means of on-off (of RF) codings.

It is an arument. A solid one. One youa re trying to ignore and channel
solely into the "Code test" issue, which is a non-issue.

>Amateur radio is one of several "personal communication" radio
>services regulated by the FCC in the USA. It is defined as strictly
>"non-pecuniary" therefore it is an avocation, not an occupation. An
>avocationary activity is a hobby.

You attempt to negate Amateur Radio's SERVICE value by the fact that no
"pecuniary interest" is involved.

Pretty thin and pretty stupid. I have dedicated thousands of hours to
various organizations for which I received NO renumeration, and in which human
lives were saved. Since I didn't get "paid" for it, does that make the
services I rendered of no value?

>>5) Your statement was: "An objective view of Morse code's relative
>> importance in the world of the 21st century is what is missing."
>> Nothing about tests or even ham radio.
>
>An objective view of morse code importance cannot be carried out
>by one who is admittedly subjective on both the subject of morse
>code testing and morse code use.

You try to make Morse Code testing the ONLY issue. Again, both thin and
stupid.

>In entering this new millenium it should be obvious that only
>amateur radio and some maritime radio services require any
>morse code ability whatsoever.

Oooooh Lennie! A SERIOUS backpeddle! You have ADAMANTLY stated that
there was NO use for Morse Code in more than one thread!

>>6) The fact that hams use Morse code in the 21st century means Morse code is
>> part of 21st century radio and the world of the 21st century. The fact
>> that lots of hams use Morse code means it's a big, important part of ham
>> radio in the 21st century.
>
>Incorrect on the "big, important part of ham radio." That is a
>subjective viewpoint. In the USA the FCC has not mandated
>USE of morse code modes in amateur radio for years.

Incorrect on YOUR "incorrect", Lennie. This is because YOU are subjective
on the Morse Code testing issue and the Morse Code issue ONLY, and are
completely IGNORANT of other issues within Amateur Radio as a whole.

As usual.

>Either. Subjective morsemen have been advertising the 1912
>Titanic ship disaster for years. 1912 is 90 years ago. There
>is no longer any need for maritime vessels to carry morse mode
>radio equipment operating on the 500 KHz International Maritime
>Distress frequency.

Actually, 500kHz is not the only frequency for which emergency traffic is
passed or initiated, in Morse Code or any other mode. Suggest you familiarize
yourself with CURRENT maritime practice before making ignorant assertions.

>The FCC has radio services specifically for "fun" (hobby) activities

Depending on how you care to "define" the broadcast services, there is NO
radio service exclusively for "fun", Lennie.

Subparts of Part 95 allow for the hobby use of rf emitters for the remote
control of models, however even that subpart is not EXCLUSIVELY about "models".

Again, a suggestion is made that you familiarize yourself with CURRENT
regulations before inserting your fungus-laden foot into your sewer-like mouth
in public.

>See the Citizens Band
>radio service and the Family Radio service. Those are regulations
>to mitigate RF interference but they are strictly for recreational
>activities.

Oh? Please cite the paragraph from ANY FCC rule or regulation that states
ANY service regulated by the FCC is "strictly for recreational activities".

>Since amateur radio is a non-pecuniary radio activity
>engaged by individuals, that activity cannot be described as anything
>more than an avocation, a hobby, something done for FUN.

Actually, a radio service that MAY be used for fun, but may also be used
for experimentation, emergency service, health and welfare, etc etc etc.

In OTHER words, it provides a SERVICE to the individual in particular or
the nation as a whole.

>The US federal government has a number of agencies administering
>to recreational activities. The US Forest Service does that with
>millions of acres of park land set aside from commercial use and
>maintained for the enjoyment of citizens. Note: Recreation is
>for fun, for enjoyment.

Duly noted. What's your point? Amateur Radio is to be regulated by the
USFS from now on? Otherwise, you just wasted bandwidth on an idiotic
"anaology".

>>There you go.
>
>There you went again, being terribly subjective.

There goes Lennie the Licenseless again...trying to subdue taht windmill.

360. An Answer Please, Lennie...

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-03 05:02:55 UTC
From: k4yz@aol.com
Message-ID: <20020403000255.13715.00001794@mb-da.aol.com>
Source record: 39578

In another thread, Leonard H. Anderson, allegedly once a "professional" in the radio electronics field, made the following really stupid assertion:

QUOTE:

The FCC has radio services specifically for "fun" (hobby) activities. See Part 95, Title 47 CFR, and specific radio control of model craft on several bands, including a 72 MHz band specifically designated for telecommand purposes. See the Citizens Band radio service and the Family Radio service. Those are regulations to mitigate RF interference but they are strictly for recreational activities. Since amateur radio is a non-pecuniary radio activity engaged by individuals, that activity cannot be described as anything more than an avocation, a hobby, something done for FUN.

UNQUOTE.

I will now ask you to please cite the specific FCC rule or regulation that restricts ANY radio service or activity to STRICTLY (your adjective, not anyone else's) recreational pursuits.

I have read both Part 97 and Part 95 thoroughly, and I cannot locate a single "ferinstance" that MANDATES recreational applications only of either service. While I wholheartedly agree that both MAY be used for recreational purposes, no where is it mandated. Even those SUBparts of Part 95 relating to radio remote control do not "mandate" that thier application was intended for "recreational" use only. I can, legally, operate a remote control device to, say, flash a roadside sign for a burger joint.

I am, on the otherhand, specifically aware of persons using FRS and "CB" in the furtherance of thier commercial concerns. Shall I notify Mr. Hollingsworth, or did the big, bad PROFESSIONAL radioman stick his foot in it just ONE MORE TIME?

Just wondering, Lennie, since YOU spend significant bandwidth picking others posts apart for word-by-word critiques, I must assume you hold yourself up to the same "standards".

(By the way...I know you NEVER would [set a standard for yourself], but I just wanna see how you snivvel out of THIS one, Your Putziness....)

Have a Nice Freakin' Day, Lennie

Steve

I do believe that "service" used in this context only denotes
"an administrative division", i.e. the FCC administers
the various administrative divisions of radio spectrum.

That's not what was said.

Two-stepping again, Your Cowardness?

>Quoting from the "Milestones" listing of the IEEE History Center.

Nice reading, Lennie....Still not inclusive. QST and other radio related publications of the era go back even further. I found them...you can too....

>See, you don't have your references handy. Do a search for
>"Thomas H. White" and go to those pages for a real history
>documentation effort.

YOU need references on other than JUST "preofessional" radio, Your Uninformedness. Sorry.

(Cites Lennie provided all good reading, however NOT "all-inclusive" of history of the era)

>If it's "stupid" then you should immediately go to the IEEE website
>and tell all those "stupid" folks off!

No. Lennie...What's STUPID is that you try to make an argument on a subject for which you obviously do not have a thourough preparation for. Your references are good reading, but again, are NOT "all-inclusive" of the era.

Hams DID help pioneer portable and mobile radio communications.

I KNOW you don't like it, but "oh well".....

>Is the Citizens Band Radio SERVICE a "service?" How about
>the Family Radio SERVICE? How about any Personal
>Communication SERVICE?

If the person operating the radio derives a certain amount of utility from the availability of the radio and it's necessary spectrum allocations, then YES, it IS a "service".

>Last year a group of climbers got stranded on Mount Ranier in
>Washington. Their rescue was started by using FRS handie-

>talkies linking up with a schoolgirl (who did not have any sort
>of radio license).

Then a certain degree of utility WAS derived from the radios, and hence a SERVICE was rendered. I am sure the hikers were NOT having fun at that point in time.

>Now, now, Steebie, take your lithium like a good little patient... we'll
>have you out of that jacket in no time...

I have no doubt you wish me in one...then I could not so-easily tear apart your rants.

Sorry about that.

What about people who weren't aware of ham radio until (what we need as a hobby need to do more of) someone introduced it to him? In order for the test to be considered dumbed down or the person lazy, they would have had to have had prior knowledge of what was going on before he jumped into the boat. What about an 18 year old that gets licensed right now? Some of the problems that have created the situations that people like Dick are complaining about happened before the 18 year old was born. These alleged problems in ham radio are the product of laziness of hams over the past 50 years. The laziness of sitting back and allowing it to happen instead of being proactive and not just hoping a four letter organization is going to do all the work to keep the hobby the exact way they wished it be. Did they ever write letters to elected officials? Did they do other POSITIVE PROMOTIAL activities? Some *may* have but many more haven't and that is why ham radio is the way it is. Can you imagine a mailing campaign where if even half of the licensed hams wrote a letter to their elected officials and the FCC at least once a month for the next 12 months stating their intentions of what they wanted ham radio to be? Sounds like it would drive them nuts!

Well, I would not expect many unlicensed people walking into a VE session and going for extra. I would expect more upgrades as being normal.

The new general/extra's are likely people with elmers who are mainly HF operators. And thus got the HF DX "bug". Since I got my extra lite :-) I do most of my hamming on HF.

382. Fast-scan ATV needs incidental music exemption

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-03 08:36:40 UTC
From: inglem@pobox.removespam.com
Message-ID: <sazq8.13619$TG6.1924777@bin5.nnrp.aus1.giganews.com>
Source record: 39594
Cross-posted to: rec.radio.amateur,rec.radio.amateur.policy

Fast-scan ham TV should have an exemption for incidental music, where the music is not the intended purpose of the transmission. For example, I can show a home video to a friend on ATV - unless it is a wedding video or a birthday video, because those have incidental music. This is dumb and arbitrary.

Or, what if you connect a video game console to an ATV transmitter. If you build an interface to send the control inputs back over another radio channel, hams in several locations could play a multiplayer game. This cannot be done over the Internet unless the game is specifically written for it, but it could be done over ATV. The only thing preventing it is that the game might play music, and we aren't supposed to have even incidental music. Again, dumb and arbitrary. Model plane and rocket video are allowed.

I understand some countries do have an exemption like this. Has anyone ever petitioned for one in the States?

Point is that the service is performed *by the FCC for the citizens*
who are members of the "service". The ARS is serviced (administered)
by the FCC. The ARS is not serviced (administered) by its members.
There is no *requirement* for members of the ARS to perform service.
Some members of the ARS are inactive and own no ham equipment.

Um, the analogy doesn't quite work. My computer is quite tethered to
the wall, I got my power cords, my cable modem, my regular modem.

> >Quite frankly, we (radio

If you think that pulling a cellphone out of your pocket and calling
Australia is analogous to ham radio, then we have radically different
ideas of what ham radio is all about. For me it's about putting out ten
watts on PSK31 and with my general purpose dipole, doing a QSO with

Australia or Antarctica. Or contesting, (har, I just had a vision of a contesting weekend with cell phones - the person who calls the most people wins!)

If you think cellphones are like the ARS, try calling random numbers and ask whoever answers their name, qth, grid locator, etc. 8^) I'll bet you won't be doing that for long.

>

How are they selling hams down the river? I've been to their site, and in fact, just joined the ARRL, and I don't see what you are talking about. Looks like a pretty good organization to me.

> Radio MUST stop worrying about just "the numbers" and

> to attract. I think it's the ONLY way, in the long run.
> If the quality is there then, in the end, sufficient numbers
> will be there, too!

Okay, give some ideas on how we increase the quality of the Amateur? Will we have character tests? Who decides? One thing I see that flies in the face of all this is that many of the people who I hear on the air that are misbehaving appear to be long term hams. Certainly a look at the enforcement pages shows some interesting info:

March 2002

Advanced - last license issuance 1995
Tech + - 1995
Tech 1998 Repeater interference
General-1993 obscenities
Tech (was novice) 1999 deliberate interference
Extra - 1996 uncoordinated interfering repeater
Extra - 1997 same
General - 1999 Same
Extra - 1993 Same
Extra - 2001 Same
General -couldn't get date no longer in database-retake license
Extra 1998 Poor repeater operation, no control op interference

Technician 1997 Unlicensed equipment, giving equipment to unlicensed minor

1 advanced
3 techs one who was a novice
1 tech +
3 Generals
5 extras

Does the Morse test keep the riffraff out? There were only 2 out of 13 people on this list who were *not* tested for Morse code operations.

The dates on the license are a little harder to figure out, because it looks like the date is based on the last renewal, not when the ham first got their license.

But what I draw from this one month look is that it looks like there is not much correlation between the knowledge and testing of Morse code and the character of the ham at *best*. This is a small sample, but 87 percent of these people were tested and passed a Morse code test!

> >Their mistake was to think that "dumbing down" our
> >licensing standards would actually have the effect of
> >reversing the trend toward negative growth in the
> >numbers of licensees.

I doubt that they think that they "dumbed down" the standards.

> >Right now, there may be
> >evidence that this is so; unfortunately, in a few years,
> >when the licenses of the No-Code Tech generation
> >start expiring, we're going to find that we're no longer
> >staying ahead of our losses.

What is your evidence that these amateurs are going to just let their licenses expire?

> The changes in the licensing requirements have meaning
> only if the people who would otherwise have not been
> brought into the avocation STAY within it and advance.

There is a good argument for the need of staying in the hobby, but why does the amateur have to advance? Our club has members who simply enjoy helping at local events. Thier version of the hobby is public service with a handi-talkie. Very good people!

> One of the primary reasons people become Hams, or
> amateur astronomers, or rock hounds, or whatever, is
> because that act separates them a little from the crowd,
> enhances their individuality, and gives them a bit of
> "cachet," of distinctiveness.

This one made me grin a bit! It's aside from the discussion at hand, but there is an old stereotype of a lot of hams, especially the ones who frequent hamfests - that many of them don't pay proper attention to

hygiene, and they do indeed acquire a cachet of de-stink-tivness! 8^)

The fundamental problem here is that who decides what makes for proper character? Some among us don't like liberals, some detest conservatives. Some hams have the old "no kids, no lids, and no space cadets" mentality. Some hams take self regulation to extremes, like the old fellow who almost turned me in to to the FCC because I made a typo on my callsign to him in an email. He looked it up in the database, and since the names didn't match, he went off the deep end accusing me of every "hamcrime" imaginable.

Each of these folk have some pretty solid ideas of what they want ham radio to be.

Problem is, we can't force other people to be like us. We probably wouldn't really want that if we did get it.

If you hear improper activities on the air, then get the FCC involved - that will go a long way towards keeping things on the up and up. Those hams of poor character, including the many who passed a Morse code test back when it was a "real" test will eventually get in line or get out.

394. Amateur Radio Astronomy and CC&Rs

Newsgroup: rec.radio.amateur.policy

From: Valentine Germann <vgermann@socket.net>
Message-ID: <uam7in7419l32b@corp.supernews.com>
Source record: 39762

Hello, all!

On April 20th, the local astronomy group, of which I've been an active member for 25 years, will be cooperating in an effort called "National Astronomy Day." We are doing this at a local high school, which has a planetarium, and last year more than 500 members of the general public attended. My goal is to have a "amateur radio presence" at this event and I have already scanned in the "Big Project" logo for use on the sign we will have set up with our equipment. I hope it's OK to do this, copyright wise, ulp! Anyway, I say "our equipment" because one other member of this astro group is also a new ham and we'll be taking turns talking to the public.

So, in support of this effort I was looking at a radio astronomy site last night and saw an account of a problem experienced by an amateur radio operator who also does radio astronomy. That is, when he started to put up his antenna, in his backyard in what must be an upscale development, the "covenant committee" showed up within hours and explained the situation. Luckily, this fellow was able to get around some of the restructions and is now using a 10-foot, semi-steerable dish that he has managed to hide sufficiently.

I can certainly see that this area is a real hornet's nest for the ARS. Years ago, my father, who worked for a painting contractor in Kansas City, a contractor who dealt almost exclusively with, er, ah, "exclusive" homes, sent my father to match finishes between some old and new construction . . . in a house that cost about $5 million.

People with this kind of money are most interesting in many ways, as are many people WITHOUT this kind of money. But, no matter, while my father was in this house he overheard one side of a rather heated con-versation between the homeowner, a third-generation inheritor of a LARGE fortune, and one of his lawyers, about a dispute over an anti-covenant fence.

That is, an interloper had just built, a few hundred feet from the $5 million house, a mere $2 million house,

and then had put up a fence that violated a covenant. The man talking to his lawyer was incensed and as the proceedings reached a crescendo he shouted, "Doesn't she know I can have her SHOT?" We don't know the outcome here since my dad finished up in a couple of days and did not get to hear about any success or failure of hired hit men!

Emotions run high over issues having to do with private residential property and these covenants, and I can certainly see the problems for amateur radio. What is happening here in Columbia, which is a pretty small burg of around 100,000 people, is that most new construction does not have much of a lot attached, even for homes in the $250,000 region, a fair amount of money here. The way these new developments are set up, if you put up an antenna in your back yard then most likely a neighbor will be looking straight at it, possibly from not much farther away than you are.

So, what a mess!

Hey, this is UseNet!

> Um, the analogy doesn't quite work. My computer is quite
>tethered to the wall, I got my power cords, my cable modem,
>my regular modem.

I have a friend who is a professional photographer and was
in Hong Kong last year at a conference. At dinner, at his
hotel, another photographer got his laptop out of his brief
case and attached it to his digital camera. After transfering
several hundred images from the camera into the computer,
the photographer got out his cell phone, connected it to that
computer, and in seconds was moving his day's take from
Hong Kong to Tokyo. All without any kind of license, just the
money for the equipment and the connections. Note that
while doing this, the photographer kept up with conversation
and dabbed at his plate. Those Orientals!

I don't think any of this is on the instant point! See above!

> If you think cellphones are like the ARS, try calling random
>numbers and ask whoever answers their name, qth, grid
>locator, etc. 8^) I'll bet you won't be doing that for long.

I think the point was that many people became hams because
they could get that "cell-like" service before it was widely
available to the general public. Now, with literally tens of
billions invested in hardware, the phone company has taken
those folks out of ham radio. How many of these are there?
We'll be finding out over the next few years, I think.

>Do you have the stats of how many hams have been lost
>to cell phones?

I think the growth numbers say it loud and clear. And it's
not just cell phones. As has been pointed out, amateur
radio has to compete with so much more today. When
I was a kid about the only "technical" hobbies I ever saw
were radio and astronomy. Today, computers and soft-
ware have siphoned off tens of thousands, if not hundreds
of thousands, of experimenters, who would be in radio if
it weren't for the PC.

> How [the ARRL] selling hams down the river?

I didn't say that. I said something about a "historical legacy."

>I've been to their site, and in fact, just joined the ARRL, and
>I don't see what you are talking about. Looks like a pretty good
>organization to me.

Yes, they are, and I'll be sending in my check later today,
now that I have a call sign!

> Okay, give some ideas on how we increase the quality

>info:

[snip]

Well, I think you see the area into which I was heading!
However, in the interest of "peace in the valley" I will
not be doing so. After viewing the landscape and the
status what am quo, I am now more than willing to let
nature take its course.

> Does the Morse test keep the riffraff out? There were

I'd like to go there, perhaps, but I am not going to do so.

> I doubt that they think that they "dumbed down" the
>standards.

Not going there anymore.

> What is your evidence that these amateurs are going
>to just let their licenses expire?

A lot of them are, I think, thus the pressure for more change.

>There is a good argument for the need of staying in the
>hobby, but why does the amateur have to advance? Our club
>has members who simply enjoy helping at local events. Their
>version of the hobby is public service with a handi-talkie.
>Very good people!

I certainly would include under "advancement" a person
who steps up to the plate where public interaction is
concerned. If you have people who WANT to give programs
and speak to the public, and are effective at doing that,
well, yes, encourage them all you can because in general
there are never enough of them. However, over time, if
a person does not "move", somewhere, technically, that
person might someday become, er, different. That is, the
behavior you're complaining about among Morse-qualified
Hams is likely the product of people who haven't "advanced"
in QUITE some time! Would you agree with that?

>The fundamental problem here is that who decides what

>We probably wouldn't really want that if we did get it.

I think the public policy dimensions of amateur radio demand
quality and committment, not sheer bulk. Here I must stop.

> If you hear improper activities on the air, then get the FCC

I haven't heard any improper activity on the air in quite a long
time. Why, even 3950 was calm the one time I pass by a
few weeks ago! Admittedly, those "Tarzan Calls" near that
frequency used to be a TRIP! Is that guy in jail?

This should be a lot of fun. I doubt there will be any problems copyright wise.

> Emotions run high over issues having to do with
> private residential property and these covenants,
> and I can certainly see the problems for amateur
> radio.

It is the biggest problem out there for the ARS, IMO! I can understand the need for some regulation, as if you are buying a house, you need *some* confidence that the electrical wiring is safe, and since you can't see it, something has to give.

But these new covenant restricted neighborhoods are repulsive. I guess these people believe they are keeping the standards up. I wouldn't live in one of them if they paid me.

I am alays amazed the lengths some people will go to just to control how others look and act.

In my development, the restrictions are much less stringeent. You can have a tower up to 40 feet. The main restriction is that it can't be a safety problem if it falls over - like hitting the neighbors house-that sort of thing. Now for some lots, it means they can't put up a tower because they are too small. But then there are always wire antennas.

Yup.

The term "transceiver" in ham use originated as a description of that sort
of rig. They were very popular on the 5 and 2-1/2 meter bands before WW2,
and in WERS service during the war. The classic setup was a single RF tube
used as superregenerative detector on receive and modulated oscillator on
transmit, and a one- or two- tube audio section used as the audio section
on receive and the modulator on transmit.

We can all go to the AH0A site and read the tea leaves, and draw all sorts of conclusions regarding [insert favorite agenda item here].

In fact the number of hams (or the number of hams in any given license class) is not a particularly significant indicator of the value of the Amateur Radio service.

Can we move on now?

With all kind wishes,

Around here they are called "autopatches". They are still common
but not nearly so much as they used to be.

I know plenty of hams whose first interest in ham radio was to use the
autopatch and repeater system for "family comms" (also known as "the
honeydew net"). Some of them have since dropped out and some have
become interested in other facets of ham radio. But we're not getting
many newcomers from that source anymore - it's
much cheaper and easier to get a family cellphone plan.

Why not just use plain, clear English?

> > On the ham bands where a CW test is required for a license, CW is
> > widely used by hundreds of thousands of hams.
>
> Which represents what percentage of the voters/citizens?

A small percentage. The total number of hams is also a small
percentage. Why
does that matter?

> Amateur radio
> could be abolished today, Jim, and there would not be even a political
> whimper.

That's right. So why does the FCC keep us around?

> We had better fulfill our "basis and purpose" or we will be
> gone and hardly anyone will notice.

Sure. How does the use of Morse code keep us from fulfilling our B&Ps?
>
> > 1) Amateur radio is not a hobby to the FCC. It's a radio service.
>
> It is one of numerous radio "services". It is just a name.

Point is, the word "hobby" does not appear anywhere in Part 97. Nor
does
any word like "avocation" or "recreation".

> We all know that amateur radio is an avocation.
> In fact, it is illegal to get paid or charge for amateur radio "service".

So? Would you say that volunteer firefighters are involved in a
"hobby" or
"avocation"? How about hams like "Jay", who posted here a while back,
who

spent several weeks helping out at Ground Zero?
>
> > 6) The fact that hams use Morse code in the 21st century means Morse code is
> > part of 21st century radio and the world of the 21st century.
>
> Sounds like delusions of grandeur to me.

No, it's a simple fact. I was on the air with Morse code just last
night - 40
meters. Lots of others there, too. In fact there were more hams
operating Morse on 40 meters last evening than people posting to rrap.

> What percentage of the 21st century involves Morse code?

So far, 1.17%. That number increases every day, though.

> That is not to minimize its importance
> within the ARS. It is just to put things in perspective.

In persepective with regard to what?
>

It's just an opinion.

> What about the other PCTA folk?

I don't control what other people say and think. Would you have those
you
disagree with silenced? I wouldn't.
>
> > > Why should fun require a federally sponsored welfare program?
> >
> > Who said anything about a welfare program?
>
> That's what the Morse code test in the 21st century is, Jim, a welfare
> (subsidy) program.

Not at all. It's just a little requirement for an HF/MF license,
that's
all. Nobody is forced to use the mode.

> It reminds me of the time my uncle was paid by the
> federal government not to plant corn.
> He was paid by them again to build

> his production of corn per acre by threefold. He produced more corn than
> ever.

So? How does that have any bearing on amateur radio? We are not paid
by the
govt.

>That's what happens when the free market is not allowed to operate.

What form should a "free market" take, in corn and ham radio?
>
> > By your "logic", ham radio is a "hobby" and hams do it for fun. If that's

> > program for fun. You can't have it both ways, Cecil.
>
> IMO, virtually the only reason for the present existence of the Amateur
> Radio Service is for emergency communications during potential disasters.

What about actual disasters?

> We had better hope that enough hams have fun doing emergency
> communications to satisfy the FCC. If not, I don't see any future
> for amateur radio.

Better read the B&Ps again, then. While emergency comms are important,
there
are lots of other reasons for the ARS to exist.

>I understand some countries do have an exemption like this. Has anyone ever
>petitioned for one in the States?

Your "wedding video" is a "maybe" as an exception, but there is no other
reason that an Amateur Radio station should be transmitting music.

There have been, in past years, "exceptions" to transmitting music, and
they were used as excuses for getting the foot in the door to "broadcast".

If you want to transmit music, get the appropriate license in the
Broadcast Service.

Such an exemption is already in the rules for space shuttle communications,
so the precedent exists.

No reason for you not to petition for something similar if you feel it is
needed. The worst that can happen is that they say "No".

I used to have this "Reply" protocol figured out ... the most recent inclusion had one set of symbols (>, or :, or [something]) ... and each more distant had sets of symbols (>> [for example]).

And each inclusion had an identifying username and address for attribution.

And all that was done by the mail program. Whether of not someone would edit it to make it look like Bill said what Joe actually said, at least the Reply "looked" like the attributions were accurate.

What Val is doing just confuses the heck outta me. First, he was attributing everything backward, and then he was attributing comments without the mailer's ID line.

I really, calmly object. Please let your mailer handle the attributions and the identification symbols. Delete what you don't want to talk about, if you must, but please return to e-mail, USENET, protocol.

Incorrect on the "big, important part of ham radio." That is a
subjective viewpoint. In the USA the FCC has not mandated
USE of morse code modes in amateur radio for years.

Supply the last year in which the FCC mandated morse code use
by radio amateurs for any specific time period. Part 97, Title 47
CFR has made ALL allocated modes optional for use by all
licensees for at least the last 6 years.

Note the message thread subject header: "Code Test Fiasco."

>>... Subjective morsemen have been advertising the 1912

>familiarize yourself with CURRENT maritime practice before making ignorant
>assertions.

GMDSS (Global Marine Distress and Safety System) has been in
worldwide use for three years. The FCC has added commercial
radio operator licenses specifically covering GMDSS operation for
at least 5 years. The USCG no longer monitors 500 KHz.
GMDSS does not require morsemanship skills.

Current maritime radio practice utilizes SSB voice and data at
long distances, VHF and UHF voice in harbor areas.

>>The FCC has radio services specifically for "fun" (hobby) activities
>
> Depending on how you care to "define" the broadcast services, there is
>NO radio service exclusively for "fun", Lennie.

Amateur radio is regulated by the FCC. Under Robeson's logic,
amateur radio CANNOT be fun or enjoyable or a hobby.

Pfui.

> Subparts of Part 95 allow for the hobby use of rf emitters for the remote
>control of models, however even that subpart is not EXCLUSIVELY about
>"models".

So...Robeson extends this NON-fun to all 175 thousand members
of the Academy of Model Aeronautics and all the smaller
associations of hobbyists who enjoy small aircraft and vehicle
radio control?

There seems to be a distinct lack of enjoyment of life by Robeson.

> Again, a suggestion is made that you familiarize yourself with CURRENT

>>more than an avocation, a hobby, something done for FUN.
>
> Actually, a radio service that MAY be used for fun, but may also be used
>for experimentation, emergency service, health and welfare, etc etc etc.

Ah! Condescension that FUN is possible?!?!? Cannot be!

> In OTHER words, it provides a SERVICE to the individual in particular or
>the nation as a whole.

The word "service" as used throughout Title 47 CFR is a regulatory
term denoting a type and kind of radio activity.

If you wish to become a serviceman, re-enlist in the military. If you wish to do a service to your country other than the military, apply for a job with the government. If you wish to be a civilian serviceman, learn a trade such as washing machine repair or television servicing. If you wish to serve food, take a job as a waitress. If you wish to serve someone, take a job as a servant.

I would suggest taking up tennis where you can serve a ball but no doubt Robeson would argue vehemently about the word "love" in tennis, such as "there is no such specific word in the rules!" No fun, no love, only puritanical service.....

No fun, no recreation in amateur radio according to Steebie.

:-)

Jim Miccolis, your replies are looking more and more like k4yz wrote them. Are you having problems with schizophrenia?

In article <20020402234411.13698.00001984@mb-da.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) writes:

>>>1) Amateur radio is not a hobby to the FCC. It's a radio service.
>>
>>The word "service" as used throughout Title 47 CFR is a regulatory
>>term denoting a type and kind of radio activity. Part 97 defines
>>amateur radio as a radio activity without pecuniary interest, thus
>>qualifying "amateur" as the opposite of "professional."
>
> Contrary to your adamant rants to the contrary, it IS a radio
>SERVICE...A service IS performed...Just as it is in the Broadcast SERVICE, The
>Citizens radio SERVICE, the Common Carrier SERVICE, etc.

The word "service" has different meanings in different contexts. My Webster's New World dictionary has the following groups for "service:"

1. The occupation of a servant.
2a. Public employment [example: diplomatic service]
2b. a branch of this, specifically the military service
3. Work done for others [example: repair service]
4. Any religious ceremony.
5. Benefit or advantage, friendly help or professional service.
6. The act or manner of serving food.
7. A set of articles used in serving [example: tea service]
8. A system of providing people with some utility [gas or water service]
9. The act or manner of serving in tennis.

The word "service" as used throughout Title 47 CFR is a regulatory term denoting a type and kind of radio activity. Part 97 defines amateur radio as a radio activity without pecuniary interest, thus qualifying "amateur" as the opposite of "professional."

> Please cite a radio SERVICE that does not meet SOME need, ergo a >SERVICE
to persons in particular or the nation as a whole.

The FCC is not chartered to regulate government or military radio so (2) above is out. (4) is out due to separation of church and state. (6) and (7) are out since the FDA handles food and the Comm Act of 1934 doesn't cover eating utensils. (9) is out since the FCC does not define tennis terms. That leaves only (1), (3), (5) and (8).

(8) is out since the FCC regulates, does not provide any utilities. (3) is also out since the FCC does not repair anything. While the FCC certainly strives to provide citizens with information, it can be considered friendly, and its staffers are professionals, it

is difficult to define a type of kind of radio activity under the
definition of (5); (5) cannot apply. That leaves only (1), that of
being a servant (presumably of the people of the nation) but that
doesn't fit with a radio activity. The end result is just a regulatory
term, an item (10) which is specialized in legal terms:

The word "service" as used throughout Title 47 CFR is a regulatory
term denoting a type and kind of radio activity. Part 97 defines
amateur radio as a radio activity without pecuniary interest, thus
qualifying "amateur" as the opposite of "professional."

>>>4) The purposes and goals of the ARS are different from other services, and
>>> so the license requirements are different. If there were no difference,
>>> there would be no reason to have a separate service.
>>
>>Non-argument pertaining to nothing. In the dim, dark past of early
>>radio the ONLY way to communicate anything in ALL of radio was
>>by means of on-off (of RF) codings.
>
> It is an arument. A solid one. One youa re trying to ignore and channel
>solely into the "Code test" issue, which is a non-issue.

No, not an "arument" [sic, argument] and it is vaporous, not solid.

See the Subject title in the header "Code Test Fiasco."

Element 1 in the license test requirement still exists. S25.5 in
the ITU-R still exists. Something that exists cannot be
non-existant at the same time.

>>Amateur radio is one of several "personal communication" radio
>>services regulated by the FCC in the USA. It is defined as strictly
>>"non-pecuniary" therefore it is an avocation, not an occupation. An
>>avocationary activity is a hobby.
>
> You attempt to negate Amateur Radio's SERVICE value by the fact that no
>"pecuniary interest" is involved.

Impossible conclusion by Robeson. A definition is a definition,
has neither "positive" nor "negative" parts to it. The "negation"
exists solely in Robeson's sorely wounded pride and ego.

> Pretty thin and pretty stupid. I have dedicated thousands of hours to
>various organizations for which I received NO renumeration, and in which
>human lives were saved. Since I didn't get "paid" for it, does that make the
>services I rendered of no value?

Definitions which apply to ALL citizens are not based on Steven
James Robeson's personal activities nor are they defineable by
him.

>>An objective view of morse code importance cannot be carried out
>>by one who is admittedly subjective on both the subject of morse

>>code testing and morse code use.
>
> You try to make Morse Code testing the ONLY issue. Again, both thin and
>stupid.

Sigh...this whole thread is about "Code Test Fiasco" as indicated
in the subject header. Robeson's reading comprehension is
quite flawed.

>>In entering this new millenium it should be obvious that only
>>amateur radio and some maritime radio services require any
>>morse code ability whatsoever.
>
> Oooooh Lennie! A SERIOUS backpeddle! You have ADAMANTLY stated that
>there was NO use for Morse Code in more than one thread!

I made a statement only on this new millennium. That is not any
"backpeddle." It is merely a fact in the year 2002.

For the year 1999 it also apples...but that is in the old millennium.
No "backpeddle."

>>much that it isn't worth mentioning. MARS is a drop in a very
>>large bucket as far as US military communications goes.
>
> That's not what was said.
>
> Two-stepping again, Your Cowardness?

No. US military communications is quite extensive, far more than any MARS activity. Imaginary expansion of MARS activities is not a realistic appraisal.

>>Quoting from the "Milestones" listing of the IEEE History Center.
>
> Nice reading, Lennie....Still not inclusive. QST and other radio
>related publications of the era go back even further. I found them...you can too....

What are those "other radio related publications?"

The special edition of the 50th Anniversary of McGraw-Hill's Electronics magazine biweekly (April 17, 1980) is quite comprehensive and covers the prehistory of radio (physics related work and experiments up to 1896) as well as the early days as a lead-in to the massive amount of history between 1920 and 1980.

As to researched histories that encompass ALL fields of radio, the Internet-available work of Thomas H. White is an excellent source, does not favor any one radio activity, and has an extensive list of references.

Admittedly, a specialty publication such as the Army Times "History of the Army Signal Corps" is hard to access but it is based on publicly-available information of US Army communications from the American Revolutionary War until about 1965. In it is a photo of "horse mobile" radio in operational use in 1932. The Signal Corps on-line Museum collection at Fort Gordon has a picture of the 1936 cavalry radio that was mounted in the saddle guidon socket, held upright by the rider, whip antenna on top, and could be used while in motion.

As to portable-mobile radio use other than in amateur literature, many collectors and non-military military historians have written extensively on the very first Handy-Talky of WW2 (tube type on HF), the AN/PRC-6 of the Korean War, and the AN/PRC-25 of the Vietnam War. See Dennis Starks' excellent descriptions on his own military radio history page on the "prick-25" and its history...130,000 units manufactured by 15 companies over a 40-year operational period attest to its design excellence in harsh environments. [includes the all-solid-state variant, the PRC-77]

>>See, you don't have your references handy. Do a search for
>>"Thomas H. White" and go to those pages for a real history
>>documentation effort.
>
> YOU need references on other than JUST "preofessional" radio, Your
>Uninformedness. Sorry.

Thomas H. White is a REAL historian, doesn't confine his research into "just professional radio." The problem with Steebie (actually one of many) is that he refuses to understand that nearly ALL of the progress in radio arts and nearly ALL of the activity in radio has been carried out by professional people.

Some more simple web-searching will turn up a huge amount of historical material on radio, many of those sites authored by radio amateur license holders. There is an extensive biography with on-line digital images of reference material on Edwin Armstrong, including reproductions of his lab notebook pages and patent papers filed for his regeneration and superheterodyne inventions. There are many and varied sites on Guglielmo Marconi and his 1901 one-way communications experimentation from Cornwall to New Foundland across the Atlantic...using a kite-lofted antenna wire at the New Foundland receiver, about as "portable" as one could get. There is the totally HUGE "Military Equipment List" (a work in progress) that has both nomenclature and many photographs of US military radios from the beginning of military radio to today...site put up and maintained by a ham. Note: The military is perhaps the very largest radio user of mobile or portable equipment.

For HF long-distance communications, the first chapter of the Pappenfus, Bruehne, and Schoenike ("Collins Sideband book" in familiar name) is an informative overview of commercial carriers circuit networks prior to WW2 and just afterwards. Henney's old "Radio Communication Engineering" and F. Langford-Smith's "Radiotron Designer's Handbook" has many references and mentions of radio history during and prior to WW2 (my original was traded long ago and I now have Fritz' epic tome on CD-ROM produced by an audio electronics seller). Harris Corporation's website had an excellent overview of post-WW2 HF communications and technical

detail as does parts of Fed Std 1045 on ALE as background
to the techniques of Automatic Link Establishment. There is
a tutorial available for free download on quartz crystals in
frequency control at an IEEE web page which, surprisingly,
offers considerable history of radio (get .pdf version rather
than .pps).

> (Cites Lennie provided all good reading, however NOT "all-inclusive" of
>history of the era)
>
>>If it's "stupid" then you should immediately go to the IEEE website
>>and tell all those "stupid" folks off!
>
> No. Lennie...What's STUPID is that you try to make an argument on a
>subject for which you obviously do not have a thourough preparation for.
>Your references are good reading, but again, are NOT "all-inclusive" of the
era.

"All-inclusive" means encompassing ALL histories, not the self-
promoting and rather biased ARRL history publications concerning
just amateur radio. To be truly "all-inclusive" one has to count all
the existing organizations such as the Radio Club of America and
their membership, some of which have already produced historical
works on radio (one example already cited is the Armstrong bio).

I've just mentioned a few items of history that I can recall by
memory. I have many more in my personal collection and can
access many more through the Web. That doesn't seem to be a
worthwhile effort since the "dialogue" is only one-way and usually
resorts to this inanity -

> Hams DID help pioneer portable and mobile radio communications.
>
> I KNOW you don't like it, but "oh well".....

No specifics given, only broad generalities. The above is no more
"conclusive" than saying "hams helped pioneer early automobiles"
(because some bought and drove them). [automobiles and the
internal combustion engine parallel the evolution of radio and
electronics]

In order to be conclusive, one has to quote some references which
cover the entire area, not just one specific minor activity. As done
above by Robeson, it is NOT specific, just a broad general statement
having nothing conclusive or quantifiable or referencible. It is just a
propaganda phrase repeated for the nth time.

"The view from 30,000 ft." is extremely common in the American language,
Jim. Where have you been that you didn't understand it?

> > Which represents what percentage of the voters/citizens?
>
> A small percentage. The total number of hams is also a small
> percentage. Why does that matter?

You forgot to add the smiley face to your joke. The FCC is an arm
of a political entity. Votes count probably more than anything else.
Too bad amateur radio was not protected under the Bill of Rights.

> > Amateur radio
> > could be abolished today, Jim, and there would not be even a political
> > whimper.
>
> That's right. So why does the FCC keep us around?

IMO it is for emergency communications. The present Morse code
requirement chases away lots of potential emergency operators.

> > We had better fulfill our "basis and purpose" or we will be
> > gone and hardly anyone will notice.
>
> Sure. How does the use of Morse code keep us from fulfilling our B&Ps?

The *use* of Morse code doesn't. The Morse code *requirement* does.
Many potential emergency HF operators are chased away from amateur
radio by the Morse code requirement. Wouldn't it be better to have
double the number of emergency operators available even if they
don't know Morse code?

> Point is, the word "hobby" does not appear anywhere in Part 97. Nor
> does any word like "avocation" or "recreation".

Point is, amateurs are expressly prohibited from making an on-the-air
vocation out of amateur radio. That is very, very clear.

> > We all know that amateur radio is an avocation.
> > In fact, it is illegal to get paid or charge for amateur radio "service".
>
> So? Would you say that volunteer firefighters are involved in a
> "hobby" or "avocation"?

My Dad was a volunteer firefighter. It was his hobby even though he was
dead serious about it. If hams were as dead serious about their hobby
as my Dad was about his, there would be a minimum of problems.

> > > 6) The fact that hams use Morse code in the 21st century means Morse code is

That would mean something if you were the center of the universe.

> > What percentage of the 21st century involves Morse code?
>
> So far, 1.17%. That number increases every day, though.

1.17% is negligible. Where did that figure come from?

> > That is not to minimize its importance
> > within the ARS. It is just to put things in perspective.
>
> In persepective with regard to what?

The 99+% of the rest of the 21st century. Do your own poll at
the local mall and get back to us.

> > That's what the Morse code test in the 21st century is, Jim, a welfare
> > (subsidy) program.
>
> Not at all. It's just a little requirement for an HF/MF license,
> that's all. Nobody is forced to use the mode.

That where you are wrong, Jim. Every HF ham is forced to use the
mode to pass a Morse code exam to meet the requirements. Why is
that so difficult to understand? A potential ham who hates Morse code
still *must* use Morse code to gain HF access. Morse code is an extremely
small part of being a sucessful ham. Potential emergency operators are
being barred from amateur radio because of the Morse code requirement.
I know. I worked with many of them at Intel. You can argue that they
are choosing to be barred. I accept that. But that still leaves us
without those otherwise willing emergency operators that we may someday
need.

> So? How does that have any bearing on amateur radio? We are not paid
> by the govt.

I assume you are talking about money. There are many other ways of
being rewarded. We HF hams are rewarded (subsidized) by the government
for choosing to learn Morse code.

> > IMO, virtually the only reason for the present existence of the Amateur
> > Radio Service is for emergency communications during potential disasters.
>
> What about actual disasters?

:-) Actual disasters are potential disasters before they happen.

> Better read the B&Ps again, then. While emergency comms are important,
> there are lots of other reasons for the ARS to exist.

I have read them, Jim, and that's what bothers me.
ï¿½97.1(a) is emergency communications.
ï¿½97.1(b) is contributions to the radio art.
IMO, we don't do that anymore.
ï¿½97.1(c) is advancing skills and technical phases
IMO, we don't do that anymore.
ï¿½97.1(d) reservoir of trained operators, techs, and electronic experts
IMO, our training is mostly obsolete. That some extras consider themselves
to be God's gift to Amateur Radio because they passed the Extra exam
is comical.
ï¿½97.1(e) enhancing international good will
IMO, we don't do that except within amateur radio and that's not
worth very much in today's international market.

So, I repeat: IMO, we had better be very good at emergency communications
if we want the ARS to survive.

>to rrap.

Just for information, we have, from another board,
an interesting discussion concerning long-distance
international communication, and then shorter-range,
int-RA-national communication. These four hams are
responding to a fifth ham whose call sign was being
misunderstood on SSB.

>>I use "Golf Four XXXX XXXX Yankee" and it is
>>quite often heard as "Golf Four XXXX XXXX Yankee"

>I find "Golf" is the most problematic letter in the
>NATO Phonetic Alphabet. Many people - especially
>Spanish speakers - have difficulty n understanding
>it. I often have to resort to "Germany" or "Guatemala"
>to make my prefix understood.

>Fortunately, I operate 95% CW, so phonetics are not
>a major problem! ;-)

Now, a third comment, from the same thread as above
but with yet another poster:

>>>I, too, have some trouble with callsigns. In my case,
>>>it's not the letters but the number. My "Whiskey XXX
>>>XXXX Papa," is sometimes heard as WXXP, parti-
>>>ularly in Eastern Europe. I've never figured out why.
>>>Guess that's why I operate mostly CW :.)

And, finally, one more, also from the same thread,
indicating that one does not have to be trying to
communicate internationally to have problems:

>>>>It is difficult to follow U.S. hams from the deep
>>>>south, although I've never had a problem with hams
>>>>from the North East, I'm sure that, for some people,
>>>>the accent would make some words difficult. I'm sure
>>>>that some folks have a problem with my accent
>>>>(although it sounds fine to me). Maybe the solution
>>>>is to listen to your pronunciation and try changing

>>>>the accent a little on the words that are being mis-
>>>>heard. Just a thought.

Ah - now I understand.

> It was, however, the approximate meaning I read from your
> earlier post to the extent that the FCC will do whatever it wishes
> without regard to what hams think.

Sorry if I wasn't clear. What I am/was saying is that while FCC reads
all comments, proposals and other input, they are not REQUIRED to follow
majority opinion on anything. So even though code testing has majority
support, FCC has the power to override the majority for reasons they
(the FCC) thinks are more important.

This works both ways. Anybody remember columnist Jack Anderson and his
column about ham radio vs. cb allocations back in the early 1970s?
Good thing the FCC didn't listen to "the majority" back then.

> > nor do I think that way. I commented on 98-143 and other NPRMs. My comments on

The purpose of comments and other input is to try to influence how Mr. Cross
& Co. think about certain issues. If nothing else, to show that there is a
range of opinion on an issue.

> > > As you know, I did comment.

I've never heard it said that way, but it sure fits the
role of those agencies. In many cases they act as lawmaker,
judge and jury all rolled into one.

> So it doesn't
> come as a big surprise that they would tend to place

It also doesn't come as a big surprise that they would place
more weight on a minority point that agrees with their opinion
and vision of an issue rather than a majority one opposing it.

Way back in 1983 the FCC said they did NOT deny, nor want to reduce,
the importance of Morse Code in the ARS. They simply questioned the
need for ALL hams to be tested on it, particularly for access to
VHF/UHF.

> It's not who has the most lawyers
> in their courtroom but rather who has the better case.

It helps if the judge agrees with you, too.

Good question, one that points out the danger in one individual making
all the rules and decisions for the ARS.
I'm sure I'm not the only one reading here who noted Bill Cross' speech
at Dayton where he said that hams need to reach a consensus on what we
want the ARS to be since "You don't want *me* making the decisions for
you, for you may not like them". Looks to me like we've already been
there, and really have no desire go go again. And once again, with a
"consensus" within ham radio even further away from being possible than
ever, it looks like that is exactly what will happen- HE will make the
rules. And his statement is something of a non-sequitar anyway, since
"make the rules for us" is exactly what he has already been doing.
And you'll note that he didn't say "us at the FCC make the rules for
you ...'" he said "ME". I believe him.
Imagine what the situation might look like if he retired and was
succeeded by a freebander with the right connections to get the job...
Goodbye ARS!

We can't know what influences Cross responded to in the late R&O, but
it's clear that FCC's main thrust is minimal work and hassle for

themselves, whatever the resulting effect on ARS. I imagine they don't worry a whole lot about us, and if ARS becomes unmanageable (which historically isn't likely) they can always drop the hammer on the whole service if that's justified.

They've been ordered to reduce their budget. How would you accomplish
that? What radio service(s) require more attention than they are worth?

Except as noted in the posts, I do not use AH0A's numbers.

I started this thread so there would be a reliable source of US amateur radio
license numbers in the future. As long as USENET archives exist, they will be
available in plain-ASCII format by simply looking up these posts.

>In fact the number of hams (or the number of hams in any given license

Regarding the FCC restructuring rule-making,
Dick Carroll, W0EX, wrote:

> Certainly not, but the main point is that
> they are not obligated to base their
> decisions on any viewpoint whatever other
> than their own....

That was my point. All judges, or quasijudges,
render decisions that are basically their own
opinions of the matters before them. The way
the system works is that those opinions are
the ones that count. Supposedly they are
honest in writing out their opinions and one
can gain an insight into the thought processes
involved in forming them.

> .... I believe it quite likely
> they decided to drop code testing to 5wpm
> for all mainly to rid themselves of the
> medical waiver problem. The fact that so
> much whining was going on only reinforced it.

I think it's safe to say that they had evidence
in front of them that the code-test waiver was
'troublesome'. And they were very likely
searching for an 'out' in the situation that
wouldn't get them cross-ways with Congress and
its ADA. That wasn't their sole consideration,
of course, and the way they finessed the situation,
I think, was to roll up all the points into some
Solomonic decision that cut the baby into several
pieces and left all parties semi-pissed. Remember,
NCI didn't get anything close to what it ultimately
wants either.

Jim, N2EY, wrote (about FCC decision-making):

> It also doesn't come as a big surprise that they would place
> more weight on a minority point that agrees with their opinion
> and vision of an issue rather than a majority one opposing it.

Perhaps the real question is: How did they form their opinion and vision? I don't think it leapt to their cosciousness fully formed. I'm sure there was informal input from their staffers. And there isn't any prohibition in being aware of reportage in the press. And there's their own background thought processes always cranking out partially unbidden insights. Unlike a jury, they don't have to restrict their purview to legally admitted evidence in front of them. They can take in the big picture and act accordingly. And they did.

The bitter truth is that none of the current FCC regulations are chiseled in stone. They are all on the chopping block all the time. It was just the code test's turn this time around.

Ed,

I seriously considered asking the NCI Board to agree to
file comments on the 70 cm RFID matter, however, the
last time that NCI filed comments "outside of its charter"
in the interest of "doing the right thing for amateur radio,"
we got railed on by all of the PCTA folks for doing so ...
if I recall correctly, even your colleague Jon Bloom was
critical of our doing so ...

Since I knew that you were "on top of the situation"
I decided it wasn't worth the grief and bitching it
would cause if NCI "tried to help out."

>>states ANY service regulated by the FCC is "strictly for recreational
>activities".
>
>I just did. Robeson persists in terrible reading comprehension.

Uh huh...YOU stated that FRS and CB were "strictly for recreational
activities".

I asked you to please cite the FCC rule or regulation that so specifies
that.

You have, so far, not done so. So who has the comprehension probelm, Your
Misleadiningness?

>The word "service" as used throughout Title 47 CFR is a regulatory
>term denoting a type and kind of radio activity.

Yep. And each "administrative division" of the FCC's rules and
regulations provides a "SERVICE" to the citizens of the United States. Whether
"you" like it or not, Your Licenselessness.

>If you wish to serve someone, take a job as a servant.

Your contempt for those who find enjoyment from providing volunteer
service is glaring. Not that it's "new" to anyone in THIS newsgroup. Your
contempt for ANYTHING that is not "you".

I "SERVE" as a volunteer medic. I "SERVE" as a SAR pilot in CAP. I
"SERVE" as a volunteer nurse with the Red Cross and other agencies. I "SERVE"
as a volunteer with ARES and SkyWarn. But in NO case could I be even remotely
considered a "servant" in the definition YOU would apply.

>No fun, no recreation in amateur radio according to Steebie.

Another Big Lie brought to you by one of the founding fathers of
"Pathalogical Liars Association". Jon Lovitz would be proud of you, Your
Truthlessness.

Again.

Steve

Val:

You can say that again. There's a lot of the same thing going on
here in Delaware -- enormous, expensive houses, 3K sq. ft. class,
going up on lots as small as a quarter acre and spaced so tight
you can't walk between them without a shoehorn and a bucket of
grease! The CC&R's in these developments not only tell you
how hard you're allowed to sneeze, but which hand you have to
hold the Kleenex in! If I could afford a quarter-mil for a house, I'd
want to at least not have to listen to my neighbor's toilet flushing
in the middle of the night! Ham radio? Fuhgedaboudit!

BTW: Aren't you glad they didn't get your call sign suffix backwards?
Then you would have had a BUM call sign!

Your phonetics could be: "Mightly Useless Bum." Sorry, just kiddin'.

Greetings and thanks for reading this message..

It is with much regret that the news of John Eastaugh VK5GY
passing, be posted to the Amateur community. I happened Tues 28th Mar
2002. He was a valued member of South Coast Amateur Radio Club Inc. [SA]
and will be sorely missed. We pass on our sincere condolences to his
family..

>Some more simple web-searching will turn up a huge amount of
>historical material on radio, many of those sites authored by
>radio amateur license holders.

Yep. And the articles from QST, "Radio", and others demonstrated "mobile"
amatuer radio stations going back to the 19-teens and early 20's.

Thanks for another multi-page atttempt to obfuscate the truth, Lennie.
You are trying to convince yourself that Amateurs were not involved in the
"pioneering" of mobile communications.

That is foolish.

>"All-inclusive" means encompassing ALL histories, not the self-
>promoting and rather biased ARRL history publications concerning
>just amateur radio.

However YOU specifically eliminate any ARRL publications.

Please, Your Lyingness, tell us how second and third decade Amateurs
concocted all those QST items in order to provide 2002-era Amateurs with a
false history of early radio development.

>As done
>above by Robeson, it is NOT specific, just a broad general statement
>having nothing conclusive or quantifiable or referencible. It is just a
>propaganda phrase repeated for the nth time.

Please prove that Amateurs did NOT help pioneer early mobile radio
communications, Lennie.

Since there's no one who will play with you anyway, I am sure you will
have fun concocting a story about how all the early radio magazines showing
Ham's mobile stations as some sort of ARRL lodge hall black magic.

I can't wait.

Sorry Dick, they (FCC) still must use rational
decision making. The FCC can be challenged if it acts
in an arbitrary and capricious manner. The reality, however,
is that the R&O for NPRM 98-143 was more than
adequately prepared to avoid any charge of it being
arbitrary and/or capricious.

> I believe it quite likely they decided to drop code testing to 5wpm
> for all mainly to rid themselves of the medical waiver problem.

Perhaps so...which alone would justify the FCC R&O.

> The fact that so much whining was going on only reinforced it.

If it makes you feel good, believe what you want.

Cheers,

I searched the web and posted the URLs about a year ago, Steve.
It even has a specification number as I recall. But I don't
still have a copy of it. I think anyone could do the search.

I read this group very closely for several months in
1997 and 1998, and then from time to time until just
a few weeks ago, when I began reading it closely
again. I still have a notebook from the spring of '98,
and some messages saved from other periods,
if they looked particularly interesting.

But, somehow, gee, I simply missed Mr. Hare's
account of the origin of his call sign! How could
that EVER have happened? Wow!

Good thing the FCC didn't act on that. Think what it would mean:

- all newcomers would have to learn at least 5 wpm code and General level theory
just to get started

- full privileges would be granted without learning any of the stuff in the Extra test

When you got started, there was an easy-to-get beginner's license. Your idea would deny today's newcomers the help you had.

I would agree.... I have let my cellphone go and only keep it in the truck for the purposes of 911 when I cannot either reach a ham (90% of my operation is at night when 99% of the hams are in bed due to the fact most old farts are in bed by 9pm, at least around here) or in an area where I do not have access to an autopatch.

90% of my former cell phone usage was short calls with a clear intention in the message. I have never really be a chatty person on a phone. Make the connection, deliver the message and hang up so to speak...

Yes, this is my view, too, since things get really ugly once
those arrows start proliferating. I tried to make a couple
of messages, with lots of arrows, "easier to read" by
modifying them. But, I got in a hurry with them and did
not follow through. Luckily, I have my Anti-Aircraft guns
fully loaded, and when the U.N. Black Helicopeters come
to get me (called in by CAM!), I'll be READY! :-)

Ask someone at the ARRL before the FCC. If it falls in a gray
area, then it may be legal. But if you ask someone at the FCC,
they will probably say "no" to cover their ass in a gray situation.

I have a few 6 meter "toys" like that. I say "toy" because they are
just those China made 49MHz AM walkie talkies I moved to
the AM/SSB portion of the 6 meter band, at 50.3714MHz. I actually
had a contact through this via a friend's 6m/2m dual band rig set up
as a dual band repeater 6m AM to 2m FM. Other ham said
"Some people will do anything to get on a band!".

No more so than the language used by many nocodetest folks. Such language
benefits no one.

FISTS' purpose is to promote the USE of Morse. Mandatory testing is only one
way to do that. FISTS focuses on other ways.

You're missing the point, Mike. It was not long ago that amateur radio technology such
as autopatching from an HT or 1200 baud packet BBS was gee-whiz stuff to non-hams. Not so today.

Hams in my area used to be well known to all the 911 dispatchers because we reported all sorts of trouble on the highway. Today such things are mostly reported by nonhams via cellphone. 911 is a free call, btw.

I wouldn't say there was a complete failure, just that we must continue and improve our efforts in the publicity area. That's part of what the "Big Project"
is about.

>> That is, you must re-position yourself in the market as
>> the HIGH-QUALITY experience. And, I hate to say it, part

How is ARRL doing that? There is more to amateur radio history than tests for Morse code.

> How are they selling hams down the river? I've been to their site, and

>people on this list who were *not* tested for Morse code operations.

Some points, Mike:

- the endoforcement letters on the ARRL and other websites are not
comprehensive.
They are only a sample.

- most US hams have taken code tests. Those who haven't are not allowed to use the bands where they can be easily heard over large areas.

- it takes time to build up a case to the point where an enforcement letter is issued.
In almost all cases, there have to be substantial complaints against a person, which
are then verified before any enforcement action is taken

- all of the above also took written exams which dealt directly with the regs, yet they
misbehaved anyway.

- "one sparrow doesn't make a spring" - look at a year's worth, not just one month.

- for many years there was very little FCC enforcement at all. Much of the enforcement
being done is catch-up work on the worst offenders who have been at it for quite a
while. And how many big fines and/or license revocations does the FCC do in a year?
How long from initial complaint to final action?

Biggest point:

How many of those cited were using Morse code on the air to commit their alleged
violations? Maybe it's not the test but the use of the mode that is important.

>
> The dates on the license are a little harder to figure out, because it

>not much correlation between the knowledge and testing of Morse code and
>the character of the ham at *best*. This is a small sample, but 87
>percent of these people were tested and passed a Morse code test!

See above. ALL of them passed written tests, too - shall we dispense with written
tests because some hams break the rules?

FCC is convinced that the Morse code test does not function as a "filter" against
"bad apples". End of story.
>

>
> I doubt that they think that they "dumbed down" the standards.

Of course they don"t think so. But the requirements have been reduced - not
just code, but written tests too. Has there been a flood of new hams? Nope -
growth is substantially unchanged from before the restructuring.

The first Techs issued after the rules changes of '91 have been expiring for
more
than a year. Most are being renewed.

HAW! But there's a serious point to be made there, Mike. It's VERY important
that we present a positive, attractive, "quality" image at all times.
"Distinctiveness"
needs to be positive!
>
> The fundamental problem here is that who decides what makes for proper

But what we CAN do is set a good example. Too many hams set a bad one.
>
> If you hear improper activities on the air, then get the FCC involved -
>that will go a long way towards keeping things on the up and up.

Tapes. FCC wants recordings - reports without tapes are not of much use to
them.

>Those

>
Yup. Thanks to Riley & Co. We need lots more, though - a dozen Rileys would be
a
good start.

The truly amazing thing is that most hams are so well behaved
given the lack of adequate enforcement for so long.

There are certain calls that the FCC will not issue sequentially.
Kim's call is one example. Such calls will be issued by the FCC
only if requested via the vanity program.

I agree 100%. And I would add that they may consider and be
affected by things that are not made public, or maybe not
even talked about directly.

For example, "freebanding" and other sorts of "pirate radio"
have been a problem for the FCC since the late 1960s. Perhaps
FCC sees ham radio as a way to clean up the mess by making it
easier to get a ham license. A licensed person has more
incentive to follow the rules than an unlicensed one.

FCC is also subject to things like personnel changes and pressure
from Congress and the White House (that's how we got medical
waivers).

> The bitter truth is that none of the current FCC
> regulations are chiseled in stone.

I know, but some hams don't realize that simple fact.

> They are all
> on the chopping block all the time.

Some of them are secured by international treaty,
however.

> It was just
> the code test's turn this time around.

Yup.

In fact, the code test treaty issue has been moved to WRC 2003 from earlier conferences. This may have actually led to its removal. Had S25.5 been considered for removal, in, say, 1997, it might have been reaffirmed or modified slightly - and its reconsideration avoided for many more years. By delaying consideration until 2003, opinions have porbably changed enough to simply remove it.

There is historical support for this view in the literature. It's been many years and I no longer remember where I read it, but I once read something that said the FCC had no idea that CB would turn out to be a "hobby" acitivity at all, since they always held the view that anyone wanting to use radio as a hobby would get a ham radio license. Maybe they're still trying to make it happen.

Yep, quite often. I once jumped in a lake because someone dared
me to do it.

Re: W5TIT

Jesus, Mary and Joseph!

When are you bunch of cranky, dilapidated, fossilized old farts
going to stop beating you chest over that friggin' call sign?
You sound like a bunch of old biddies gossiping
after church about someone wearing a "shameless" dress or something.
Christalmighty! Go play shuffle board, or poker,
or with yourself, for pity's sake!
What would Jesus do?
He's turn you 70 year old children over his knee
and spank the crap out of you, that's what.

You guys don't have much to do.
Leave her the hell alone and GET OVER IT!

Dave S.

Considering that the FCC-stated purpose of restructuring was to streamline
the rules, and further considering there was no stated purpose related to
"growth of the amateur service", then growth-per-year is not a measure of
whether restructuring is working or not working.

With all kind wishes,

Would you mind pointing that out to Carl Stevenson? (Cecil, too).
(T)he(y) didn't seem to get the word. We're still waiting for the
battalion of reformers to update the ARS, while Carl yaks on SSB and
Cecil sruggles along on CW at 10wpm..

In 97.113(a)(4) it is clearly prohibited. ARRL cannot change that. The
only solution is a petition to the FCC for a rule change.

With all kind wishes,

de Hans, K0HB

Very true, but I wanted to use that sample to just get an idea of who's doing the bad stuff.

> - most US hams have taken code tests. Those who haven't are not allowed to > use the bands where they can be easily heard over large areas.
> - it takes time to build up a case to the point where an enforcement

> regs, yet they misbehaved anyway.
> - "one sparrow doesn't make a spring" - look at a year's worth, not just
> one month.

I'll start here. I'm not out to prove any particular thing, here. But In the context of the thread, I'm very skeptical that the ARS is going to hell in a handbasket and that dropping the morse Code testing is allowing the less desirable elements into the hobby.

Even so, I am pro-morse code. Perhaps it sounds like a contradiction, but I just don't believe the apocolyptic visions. I know that dropping it to 5wpm for general got me involved, and I'm just the sweetest guy on the block! 8^)

Regards the small sample size, you are right, but I didn't have much time to do my research. Had to get to work and all. But if the bad boys and girls are being let in by the new dumbed down testing, I would have expected a split much different than 87% to 13%.

> - for many years there was very little FCC enforcement at all. Much of the
> enforcement being done is catch-up work on the worst offenders who have
> been at it for quite a while. And how many big fines and/or license
> revocations does the FCC do in a year?

This is all indicitive of something good though. If the FCC is finally starting to crack down on the baddies, it can only improve the quality of the service

> How long from initial complaint to final action?

This I note as a problem. It will probably never be fast enough. Just verification that the complaint is not bogus will take plenty of time. I note that many complaints have been filed where the FCC ends up admonishing the complainant!

> Biggest point:
>
> How many of those cited were using Morse code on the air to commit their
> alleged violations? Maybe it's not the test but the use of the mode that
> is important.

Well, I can't particularly agree with this one. If we start to include the mode, it takes the discussion in a different direction. The number of possible violations decrease when confining activity to a single mode.

But my overall point was that if the present day testing is allowing riffraff on the bands, we should be able to see that in the enforcement actions, not unlike how you can go through a police logs in a newspaper and see that a large percentage of automobile accidents are caused by teenage males, that most drug offenses are by young people - that sort of thing.

> > But what I draw from this one month look is that it looks like there is

I hope you don't think I was trying to suggest anything of the sort, Jim!!!! It's all in how I was trying to see a correlation as noted above.

<Snippage>

> > This one made me grin a bit! It's aside from the discussion at hand,

>
> HAW! But there's a serious point to be made there, Mike. It's VERY
> important that we present a positive, attractive, "quality" image at all
> times. "Distinctiveness" needs to be positive!

One of the things on this line that I think is important is to not project the stereotype of the "nerd ham". Not that there is anything wrong with being a nerd - I am one - part time. But I think it is important that a cross-section of types need to be presented. What else do we do? I saw a web page from a ham who combines his ATV ham interests with his other interest Motocross racing, I play ice hockey and go 4wd'ing. The potential ham needs to know that we are not all just sitting behind our radios in our underwear all night long.

>
> The truly amazing thing is that most hams are so well behaved

>That where you are wrong, Jim.

Not at all. I may be mistaken, but I'm not wrong.

>Every HF ham is forced to use the
>mode to pass a Morse code exam to meet the requirements.

They are simply required to pass a basic test. They are not required to use
it on the air at all.

> Why is
>that so difficult to understand? A potential ham who hates Morse code
>still *must* use Morse code to gain HF access.

Nope. Just pass the test. Use of the mode requires a radio set.

> Morse code is an extremely
>small part of being a sucessful ham.

To you, maybe. Not to many others. Are you the center of the universe?

> Potential emergency operators are
>being barred from amateur radio because of the Morse code requirement.

Nonsense. If that were so, there would have been a flood of new hams after
1991.
But there wasn't.

>I know. I worked with many of them at Intel.

Is Intel the center of the universe?

> You can argue that they
>are choosing to be barred. I accept that.

There you are.

> But that still leaves us
>without those otherwise willing emergency operators that we may someday
>need.

So? The FCC has reduced the test to its minimum reasonable level. They cannot
do more
without a change in S25.5, which will almost certainly happen at WRC 2003.

Let's fast-forward a couple of years. Suppose the code tests all disappear
because S25.5 is
deleted at WRC 2003, and there is no big flood of newcomers. Will you and
others admit that
it wasn't a barrier, and move to put it back? Will the FCC? No way!
>

>ï¿½97.1(b) is contributions to the radio art.
> IMO, we don't do that anymore.

Maybe YOU don't, but others do. Wasn't PSK31 a "contribution to the radioart"?
Code tested hams did that.

>ï¿½97.1(c) is advancing skills and technical phases
> IMO, we don't do that anymore.

Maybe YOU don't, but others do. My skills and technical knowledge are
constantly
improving, even after almost 35 years as a ham.

>ï¿½97.1(d) reservoir of trained operators, techs, and electronic experts
> IMO, our training is mostly obsolete. That some extras consider themselves
> to be God's gift to Amateur Radio because they passed the Extra exam
> is comical.

So? You need to hang out with different folks, Cecil. I know lots of trained
operators, techs and electronic experts who are hams. I learn much from them.

>ï¿½97.1(e) enhancing international good will
> IMO, we don't do that except within amateur radio and that's not
> worth very much in today's international market.

Maybe YOU don't but others sure do. I remember all the noise about how the
Rooskies and the Cubans were all big bad evil Commies - but it tuirns out that
at least some of them were hams, and not so bad after all.
>
>So, I repeat: IMO, we had better be very good at emergency communications
>if we want the ARS to survive.
>--
Don't put all your eggs in one basket. And don't blind yourself to all the good
things that are going on every day in ham radio.

Then you oughta be worried. According to the AH0A website, the US ham population peaked in March 2001 and has decreased slightly since then. All of the growth claimed for the restructuring happened in less than a year.

Val IS a licensee, and at NO TIME did he spend any of his pre-licensure days "telling" us how to do things. He's applying himself towards learning AMATEUR practice, NOT trying to tell Amateurs how they SHOULD be doing it based upon a dubious career in "professional" radio.

> And you'll note that he didn't say "us at the FCC make the rules for
> you ...'" he said "ME". I believe him.

Interesting point - I think you are on to something.

Perhaps the message is simply this: The FCC wants us hams to work out
our problems/issues/differences amongst ourselves, then present a
workable solution to the FCC, which they will rubber-stamp into law.
But if we bicker amongst ourselves and cause them to actually have to
make a decision, we may not like the decision. And it may not be in
the
best interest of the ARS.

Example:

Suppose for the purpose of discussion that S25.5 goes away at WRC
2003.
What should our license structure look like besides dropping Element
1?
Should there be more changes?

I can see two possibilities:

1) The issue is not taken seriously, and the FCC does something dumb
like
simply dropping Element 1 but not giving Techs any HF. Or maybe they
funnel all existing hams into one or two classes. Or maybe the old
system
creaks along for years to come.

2) We produce a proposal for a revised license structure and present
it to
the FCC. This structure has wide support among individual hams and
amateur
groups. It also reduces FCC admin work. FCC does the NPRM thing and
sees
80-90% support for the idea, with lots of comments and little dissent.
They
take path of least resistance and it becomes official.

Repeat this enough times and we almost become a self-governing
service.

Which is better for the ARS' future?

> Imagine what the situation might look like if he retired and was

AMEN! And we have to think that way too.

> I imagine they don't

>

Or even if it's not.

But they may keep us around for a different reason. Dumping the ARS could
result in even more freebanding and pirate stations on the air. And lots
of cheap equipment for those who are want to freeband.

It means getting the top-down. I'm amazed you haven't heard of it.
I'm was also amazed you had never heard of LEXX, Dr. Dean Edell,
and Neal Boortz.

> Not a joke. Why does it matter?

Why does a large voting block matter? Refresh my memory - what
country do you live in?

> Citizens don't vote for FCC officials.

Citizens vote for the FCC officials' bosses.

> >The present Morse code
> >requirement chases away lots of potential emergency operators.

> You have proof of this?

Yep, half of the nocode techs I knew at Intel fall into that category.

> Did the reduction in code test requirements to the bare minimum two years ago,
> or the elimination of the code test for Technicians 11 years ago give us twice
> the number of emergency operators?

"Twice" was just a talking point. But the elimination of the code test for
techs certainly did give us a whole bunch of new emergency operators. A
lot of those guys would be willing to transfer their talents to HF if
it were not for the Morse code test.

> All that's prohibited is being paid for service. A schoolteacher can be paid
> for operating a ham station as an educational activity.

A schoolteacher cannot make amateur radio his/her vocation. Ham radio
is an avocation.

> So, in your book, a "hobby" is anything you don't get paid money to do.

Of course, that's one of the definitions of "avocation".

> >That would mean something if you were the center of the universe.
>
> How do you know I'm not?

There, there, Jim, of course you are the center of the universe.

> >1.17% is negligible.
>
> Would you eat food that was 1.17% poison?

I probably do it every day.

> Most of the world doesn't care about ham radio one way or the other, let alone
> testing.

My point exactly. Your observations are from within the ARS. Think outside
the box for a more objective perspective.

> >Every HF ham is forced to use the
> >mode to pass a Morse code exam to meet the requirements.
>
> They are simply required to pass a basic test. They are not required to use
> it on the air at all.

You didn't say "on the air". You said they didn't have to use it.

> > Why is
> >that so difficult to understand? A potential ham who hates Morse code
> >still *must* use Morse code to gain HF access.
>
> Nope. Just pass the test. Use of the mode requires a radio set.

Uhhhh Jim, Morse code is not a mode. My statement still stands.

> > Morse code is an extremely small part of being a sucessful ham.
>
> To you, maybe. Not to many others. Are you the center of the universe?

I should have said: Morse code doesn't have to be a large part of
being a successful ham.

> > Potential emergency operators are
> >being barred from amateur radio because of the Morse code requirement.
>
> Nonsense. If that were so, there would have been a flood of new hams after
> 1991. But there wasn't.

Huh? There was a flood after 1991. That's what kept ham radio afloat.

> >I know. I worked with many of them at Intel.
>
> Is Intel the center of the universe?

Intel is representative of the large technical corporations of which
there are many.

> Let's fast-forward a couple of years. Suppose the code tests all disappear
> because S25.5 is deleted at WRC 2003, and there is no big flood of newcomers.
> Will you and others admit that it wasn't a barrier, and move to put it back?
> Will the FCC? No way!

Of course not, Jim. If the code requirement is removed and nothing happens,
then it was unnecessary and shouldn't have existed anyway. Governmental
regulations that don't do anything certainly don't deserve to exist.

> >:-) Actual disasters are potential disasters before they happen.
>
> No, actual disasters happen after potential disasters.

No???? You are saying that potential disasters don't exist before
actual disasters happen??????? What a strange thing to say.

> So? You need to hang out with different folks, Cecil. I know lots of trained
> operators, techs and electronic experts who are hams. I learn much from them.

I'm sure they are like the hams I know. Most of their technical knowledge
came from their formal education and vocation, not directly from ham radio.

> Don't put all your eggs in one basket. And don't blind yourself to all the good
> things that are going on every day in ham radio.

IMO, if the ARS ceased all emergency communications, it wouldn't be allowed
to exist for very much longer.

People sue over many things. The court decision was such
that they ruled the FCC did NOT act contrary to their
charter, and or in an arbitrary or capricious mmanner.

> > The reality, however,

The so-called "article on page 94", which Val waves around here on a number of occasions is not an "article" at all, but simply an "Op-Ed" column, or featured "letter to the editor". As such, it is not an ARRL pronouncement, opinion, statement, staff study, or anything else approaching an ARRL position statement. It is but merely one persons view on a topic, a view which might or might not reflect ARRL policy.

In fact, in a sidebar on the same page, the Editor points out that submissions of such opinion pieces "need NOT be consistent with League policy".

So much for "panic" and "desperation"!

With all kind wishes,

Yep, Star Trek is fun, but I'm not deep in it. I got in to ham radio for
emergency communication, and I never considered CW for such use.
None-the-less, I'm a ham whether tweedle dee, tweedle dim and tweedle dum
like it.

That's what vanity callsigns do, Larry. That's why they are called
"vanity."

and
> and what she considers to be her extraordinary secondary sexual

What I've seen of ARRL HQ strongly suggests that by the time they wake up and realize it's time for action it's aleady too late to cure the situation that should have created some panic.

Val:

Ed picked his call sign because he is the ARRL's resident expert
on Radio Frequency Interference. His call sign is both clever and
meaningful -- unlike another particular call sign which gets a lot
of attention on this newsgroup! (No, Cecil, I don't mean mine!)

Dave:

Kim selected her call sign for the specific purpose of calling attention
to herself. Now she is merely reaping that which she has herself
sown. (Sewn?) Anyway, she's the one beating her chest, as it were --
not us. She picked the call sign.

Dave:

I can't speak for anyone but myself, but I sure didn't deliberately select
a sexually-suggestive call sign (allegedly on a dare) for the purpose of
being a voluntary object of controversy in a family-oriented radio service.
That was Kim's own doing. Now, she is simply being held accountable
for her actions.

Dick:

Well, I guess I shouldn't say "never," in fact, I'm sure Kim is just
as capable as anyone of getting her Extra. Perhaps, in my own
way, I'm providing the encouragement she needs to do so. In
which case, if she does, it will have been because of me! I have
no problem with her getting her Nickle Extra. It will just prove
that anyone can do it.

That sounds like one of those "it was great in the old days" whines.
It is hardly new. My house has deed restrictions about making
alcohol on the property, and about people "not of the caucasian
race" (I quote) living there, that were placed on the deed when
the original farm lot was subdivided in 1926, so it seems like
the general INsecurity dates back to at least then.

For a lot of people whether it is "insecurity" or "keeping the
property values up" seems to depend strongly on whether the
restrictions on others bother them personally or not.

I did NOT deny making the mistake, Dave. You did, for days. It is one
thing to make a simple error. But it is an altogether different thing
to deny making the error over and over for days even after I had
reposted it for you more than once. What kind of person continues
to deny that he posted something even after it has been quoted back
to him multiple times?

You lie was easy to find, Dave. I just searched for "comparting". Here's
what you said.

Dave Heil wrote:
> I'm calling you on this diversion from your original erroneous comment

After I reposted what you said above, you responded with:

> I said you were "comparing" not "comparting".

For days, you continued to deny saying "comparting". The history is
all there on Google.

I was referring more to the congresspersons/senators that writing to the FCC, guess I should have made that clearer. Although I still believe they need to hear from us.

...and only a nit pecker (I love the newly coined term) would make an
issue of it. I wrote that the term was a typo. You knew that it was a
typo yet you continued to attempt to make issue of it. It was a mote
then. It is a mote now. Your double standard is exposed.

It hurts The Gadfly to ponder. He can't imagine that if ham radio was
for everyone, everyone would have a license.

K0HB wrote, under the influence of the rather large
burr I've obviously put under his saddle:

>The so-called "article on page 94", which Val waves
>around here on a number of occasions is not an "article"
>at all, but simply an "Op-Ed" column, or featured "letter
>to the editor".

Hm. Let me see. The editors of ARRL, who have just
announced that they are whacking out of the magazine
the minutes of their own board of directors' meetings, see
to it that this particular piece is featured. Hm. I guess
I'm just dense (NOT) but I think I see policy formation and
concensus generation under way here. Though I may have
had my first ARS license for a rather short time, I think
I can recognize editorial decision-making for what it is
when I plainly see it in action. This article is a CALL to
action, for the BIG PROJECT. It is DIRECTLY in line
with ARRL policy and was placed because of that fact.
Whatever I've done to hack you off, I'm going to have to
do some more of it, because at the rate your going, your
IQ is going to be below grade in about four more weeks.
With all kind wishes.

>As such, it is not an ARRL pronouncement, opinion,
>statement, staff study, or anything else approaching an
>ARRL position statement. It is but merely one persons
>view on a topic, a view which might or might not reflect
>ARRL policy.

Bull, and you know it.

>In fact, in a sidebar on the same page, the Editor points out
>that submissions of such opinion pieces "need NOT be
>consistent with League policy".

So what? What about THIS particular piece? Can you read?

>So much for "panic" and "desperation"!

If you insist . . . there DOES seem to be some "panic" and more
than a little "desperation" in the tone of that piece, which I think
falls under the aegis of "whacking the readers upside the head
with a two-by-four," in editor-speak. Are you really as dense as
you appear? The BIG PROJECT is, er, ah, BIG!

>With all kind wishes,

I don't think so . . . and don't give a rat's a** , either.

Val

P.S. And I'm going to be talking to members of the general public, a LOT of them, and many of them students, on April 20th. Along with a couple of friends, both Hams, and both in our astronomy club, we'll be encouraging as many people as possible to get involved in the amateur radio. I have HEARD the call.

Courts have reversed FCC decisions at various times. Probably
not on amateur (i.e. Part 97) rulings, but the hsitory of
telecommunications regulation has more than one example if
you wish to go look into such things.

> Courts simply
> defer to the FCC as the final authority in the field. No one says they

Exactly! I have no CC&Rs, but we once had a neighbor who
just could not understand why I would not park my car(s)
in the garage. She believed that if you have a garage, you must
put your car(s) away every day and not leave them in the
driveway.

Cheers,
Bill K2UNK

Only a nit pecker would make an issue out of your lying about making
a typo? The issue is not that you made a typo, Dave. The issue is that
for days, you wouldn't even admit that it was a typo. You kept denying
that you said "comparting" instead of "comparing" even after I had
proven to you multiple times that you had said "comparting". Only after
your lie was days old did you finally grudgingly admit that you had
made a typo. Everyone makes typos. You're the only person who I know
who has ever lied about such for days.

Trouble is, Val, I didn't equate anything with anything. Steve
made a stand-alone statement about you. Nobody else was
mentioned in his statement.

> Steve said:
> > Val IS a licensee, and at NO TIME did he spend any of his pre-licensure
> > days "telling" us how to do things.

This was a statement about you and about nobody else. You spent
a lot of time before you were licensed, telling us how things
ought to be done within amateur radio. There's nothing wrong
with doing that. But Steve's statement was false.

>
>Huh? There was a flood after 1991. That's what kept ham radio afloat.

Nope. There was growth in the years leading up to 1991, and more growth after
1991. Then the growth slowed down.

Ham radio wasn't "sinking" before 1991.

>> Let's fast-forward a couple of years. Suppose the code tests all disappear

I think there are much better choices of words than those terms. Just like
there are better choices for Bruce Perens than "battle" and "fight" and
"front" (as in "frontline"). And better choices for Carl Stevenson than
"idiot", "twit", "olde fartz", "dinosaur dung encrusted". And better choices
... well, you get the idea.

> > FISTS' purpose is to promote the USE of Morse. Mandatory testing is only
> one
> > way to do that. FISTS focuses on other ways.
>

> FISTS advocates mandatory Morse tests.

Where? I just visited the website. No mention of tests. FISTS did not submit comments to the FCC on the issue and does not have an official position on it. One can be a member of both FISTS and No-Code International without any contradiction of either organization's rules or requirements.

Of course it's probably true that most FISTS members favor mandatory code tests. But as far as I know FISTS as an organization has no official position on the issue. FISTS membership does not limit the freedom of its members to hold and express differing opinions on code testing.

>It's a new focus.

Show us where FISTS, as an organization, advocates mandatory code testing.

Plain English is boring. I see I left out a word. The "view from
30,000 ft." means getting the objective top-down view (rather than
the subjective bottom-up view).

> I know LEXX is a fictional character on a cable TV scifi chow. I have no
> idea who Edell and Boortz are.

LEXX is a science fiction version of Monty Python type humor. Edell
and Boortz are radio talk show hosts. Edell puts me to sleep at
night and Boortz wakes me up in the morning. If you're interested:
http://www.healthcentral.com/drdean/aboutdrdean/aboutdrdean.cfm
hppt://www.boortz.com

> Your protests are kind of hollow, Cecil, considering how you described yourself
> as a "CW expert" some time back but you had no knowledge of Ten Tec.

I obtained my CW expertise before Ten Tec even existed. Does that
mean there were not CW experts before Ten Tec existed?

> >Yep, half of the nocode techs I knew at Intel fall into that category.
>
> They won't participate in emergency communications because of the
> Morse code test?

They can't participate in HF emergency communications because of
the Morse code test.

> >"Twice" was just a talking point.
>
> You said we'd have twice as many. Now you backpedal.

Two was simply the next natural number up from one. One would have
been wrong. Don't you like natural?

> > But the elimination of the code test for
> >techs certainly did give us a whole bunch of new emergency operators.
>
> How many?

Don't know exactly. That's why I said a "whole bunch". How many Techs
are there? 200,000? It would naturally be some percentage of the number

of Techs.

> >A
> >lot of those guys would be willing to transfer their talents to HF if
> >it were not for the Morse code test.
> >
> So there is no emergency communication on VHF/UHF?

Did I say that? Nope, I didn't. My statement doesn't need interpreting.
I could ask you: Does that mean that you think HF emergency comms
are unimportant? I could but I won't.

> >> >1.17% is negligible.
> >>
> >> Would you eat food that was 1.17% poison?
> >

What percentage poison is scotch?

> >Huh? There was a flood after 1991. That's what kept ham radio afloat.
>
> Nope. There was growth in the years leading up to 1991, and more growth after
> 1991. Then the growth slowed down.

The growth in the Tech class didn't slow down. Subtract out the Techs and
ham radio would have been going downhill fast. The flood of Techs was the
only thing that kept the ARS membership at a reasonable level.

> And you avoid the real question: Will you and others admit it wasn't a barrier?

It was and is a barrier, Jim. The Morse code exam is the only thing that
keeps me from QSOing with my friend in Colorado. He has promised to upgrade
to General and get on HF just as soon as the Morse code requirement is dropped.
There are many other Techs just like him.

> >Most of their technical knowledge
> >came from their formal education and vocation, not directly from ham radio.
>
> Ham radio set me and many others on the road to technical learning. It also
> helps keep us interested.

That's nice but irrelevant to the discussion. My statement stands. I suspect
most of your technical knowledge, like mine, came from your formal education
and vocation, not directly from ham radio.

> >IMO, if the ARS ceased all emergency communications, it wouldn't be allowed
> >to exist for very much longer.
>
> Maybe. But the FCC may be keeping us around for other reasons.

But IMO, not *just* for other reasons. I believe emergency communications
is more than half the reason the ARS continues to exist. We had better
make sure that we are good at it.

Sure it is, Cecil. You accuse another of a lie and that is supposed to make it fact. I'm now using your own tactic. Your statement was obviously no typo. It must have been a lie. There have been a number of times which you've stated things here which are not true. Rather than attributing those to gaps in your knowledge, I'll now state that they must have been lies.

You have now overlooked twice my statement that I acknowledged a typo and have continued to say that I deliberately told an untruth. That is simply a lie. Your double standard continues.

Nope Dave, I immediately admitted it was a typo. You denied for days
that you had made a typo - big difference.

> You have now overlooked twice my statement that I acknowledged a typo...

I haven't overlooked that statement, Dave. You acknowledged that
you made a typo ONLY after lying about it for days - big difference.
Why did you choose to lie about something for days before admitting
it? Why do you think lying about something for days is the same as
making a typo?

I am NOT making an issue over a typo. Everyone makes typos. I am making an issue over you lying for days saying that you didn't say "comparting" even after I reposted your posting multiple times proving that you said "comparting". If you are going to deny saying the word "comparting" for days, why not just deny it for life?

I know a lot of people feel that way. We have a few gated communities in our area. I find it chilling that these folk put themselves in jail, for all practical purposes.

My neck of the woods isn't a high-crime area either.

I think that this siege mentality from so many folk is more a symptom of something wrong with them - NOT the rest of the world.

I had to chuckle when a year or two ago, there was a domestic disturbance in one of these neighborhood bastions of gentility, and they had to call in the police, evacuate the neighbors, and.... there goes the neighborhood! "Sheesh, is there no place where I can have security and no annoyances and only the right people in my neighborhood?" In a word, no.

They are self made victims.

I like the old qoute "The best revenge is living well".

I didn't bring it up this time, Dave, you did. Why you would want to
face the reality of your lies yet once again is beyond belief. Here's
a compilation from Googal of what was said back in November. Read it
and tell me again who was/is lying.

Dave's original message.

580. A Tale of Two Magazines: QST vs S&T!

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-05 17:41:32 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <uarncn9nkpmj92@corp.supernews.com>
Source record: 39848

Hello, all!

I have in front of me the April 2002, issue of two magazines, the ARRL's QST and Sky Publishing's SKY AND TELESCOPE. Both of these efforts are specialty magazines with relatively small circulation, based in the eastern United States. QST has a higher page count, about 155 to about 135, and has more column inches of text than S&T, which has been "modernized" in recent years, cleaning up its look. As far as advertising percentage goes, QST has 37 full-page ads, S&T has 29, so any revenue difference is likely in QST's favor. I think that a comparison of these two magazines might be most useful to some on this newsgroup, considering that the ARRL is now embarking on a serious-minded attempt to re-vamp the image of amateur radio in the United States. Surely, QST is an important part of meeting this challenge.

Let's begin at the beginning, with the covers. For many years S&T has featured ONE big photo on the cover, with text superimposed, as QST was doing back in 1952! That is, if you have the April QST, repair to page 92 and note the old covers shown there. Look at how attractive that 1952 cover is, compared to the, let's fact it, cluttered and ugly cover of the 2002 edition. What a de-evolution!

The April, 2002 cover of S&T is very attractive, in spite of the numerous blurbs plumping for the articles inside. At the upper right is a thumbnail image that can be seen and understood, with a blurb explaining what it is. The QST cover, unfortunately, is pretty sad. The background is complicated and distracting, totally obscuring some of the blurbs. The colors used clash, to say the least.

Where S&T has ONE large photo on the cover, and a beautiful one at that, QST has one, two, three LITTLE photos, too small to truly be seen. And to make matters worse, the photos are (in keeping with "amateur radio"?) amateurish to the maximum. The largest one, of a guy sitting at a computer, is about as pedestrian as it can get AND has a huge area of washed-out-white in it! Very bad. The other two photos, also amateurish, show an ugly building with what must be antennas, and some blurry green stuff near what must be some water, somewhere. A garish red box at the bottom is combined with a very unattractive blue type to state that the (crude) display above concerns: "6-meter Dxing from the Galapagos." Folks, it doesn't get much worse.

Inside, the situation is similiar. S&T, the smaller magazine with what has to be similar or even less ad revenue, is MUCH cleaner, more attractive, and easier to read. The layout of S&T is relatively simple, the use of color effective, and the blurbs and bleeds not interfering with the text. S&T has several technical articles, a few reviews, plus star charts and other "institutional" material. It even has a "big project," having to do with light pollution in part arising from, ah, the screaming desire to be "safe"

through the use of megawatt lighting everywhere in the United States, or so it seems.

For QST, there is a lot of hard-to-read small type but much of it is necessary, so that's acceptable. The general layout is only "OK" but the articles are pretty well edited and quite readable. The slide begins with some of the illustrations and really goes down hill with many of the photos. It's true that the technical illustrations needed for amateur radio, most of them, are not going to have the pizzazz of astronomy. But it seems almost as if someone has gone out of their way to make the illustrations in QST less interesting than they could be. And there are a lot of amateurish photos, of guys standing around holding stuff, items that S&T banished a long time ago. QST has the look, in places, of the very small Astronomical League's REFLECTOR, which is moving up the food chain fast but still has too many photos of, ah, guys standing around holding stuff. As for photos of guys sitting at computers, indoors, with blown-out windows in the background, they should be PURGED from ANY magazine, and a new art director hired immediately. Or, more likely, it's time for QST to HIRE an art director!

In closing, if you're passing a newsstand over the next few days, take a look at S&T and see the way a specialty magazine SHOULD look. Then go to page 92 of the current QST and look at the way your QST * USED * to look! I think you'll be amazed!

Hmm, maybe the 1950s truly WERE the Golden Age of Ham Radio!

Do you really think any of us belong to ARRL only because of
the magazine cover? Do you think any of us care about the magazine
cover?

Sounds more like you want QST to take on the aspect of
some "glossy" newstand popular public magazine.

> For QST, there is a lot of hard-to-read small type but much of it is
> necessary, so that's acceptable.

How generous of you.

Again, assuming QST were to embark on changes which would
satisfy your criteria of quality, just what do YOU thinkwould happen?

> And there are a lot of amateurish
> photos, of guys standing around holding stuff, items that S&T banished a
> long time ago.

Same old generalizations from Val. How about several
specific examples and why those items should be "banished"
from the pages of QST.

> QST has the look, in places, of the very small Astronomical
> League's REFLECTOR, which is moving up the food chain fast but still has
too

Guess it must be me...I don't recall ever being concerned about
how "artsy" the pages of QST are or are not.

> In closing, if you're passing a newsstand over the next few days, take a

>
> Hmm, maybe the 1950s truly WERE the Golden Age of Ham Radio!

20/30/40 years ago is pretty commonly viewed as "the golden age of"
lots of things. Same old nostalgia about auto racing, antique cars,
model railroading, model airplanes, etc. Nothing new there. 20/30/40
years from now people will look at the 80/90s the same way.

Cheers,
Bill K2UNK

So, you, realizing that I'd made a typo, decided to ride it out. You
knew it wasn't a lie at all.

Sorry, Cecil. All of your typos will now have to be judged as lies.
Your misstatements and reverses (as in the recent exchanges with N2EY)
will have to be judged lies. Its obvious to me that everytime your
reverse yourself, you are lying.

That's the biggest lie yet. Every posting I made, I pointed out
your typo. That was about a dozen postings over a five day period.
Nobody is that dense, not even you. Even Kim pointed out your
typo a couple of times and you kept denying that you had said
that I had "comparted" the items. That old excuse just won't fly.
Care to try another?

That's a double lie. I have never said you wrote it more than once.
You wrote it once and then denied that you had done so for five days.
I'm not lying, Dave. I pointed out your typo about a dozen times over
five days and you continued to deny ever saying "comparting". You even
denied it to Kim when she also pointed it out to you. The evidence is
there on Google for all the world to see. You simply could bring your
omniscient self to admit that you had made a typo.

One more time. Everyone makes typos. You are the only person I have
ever known who lied for days denying that you had even made a typo
while it was being pointed out to you in every posting.

> So, you, realizing that I'd made a typo, decided to ride it out. You
> knew it wasn't a lie at all.

I pointed out your typo for days, Dave, while you continued to deny that
you had made a typo. You appeared to be such a perfect being that you
couldn't even admit making a typo.

> Sorry, Cecil. All of your typos will now have to be judged as lies.

I have never lied about my typos, Dave. I don't know anyone except you
who would even attempt to lie about a typo - and you lied about it for
five days while Kim and I were bringing your attention to it every
posting. What made you change your mind and tell the truth? Seems to
me, lying about it forever wouldn't be any worse than lying about it
for five days. Come to think about it, you are still lying about what
happened, trying to blame me for your denials of making a typo.

Your jeremiad ignores an important distinction between the
two magazines.

"Sky and Telescope" is primarily a commercial periodical.
"QST" is primarily a membership journal.

I'd much rather ARRL buy some lab equipment than use that money
to hire a couple of artists to make QST a work of art.

With all kind wishes,

The golden age of ham radio was indeed the 1950s and into
the early 60s. Anyone who tells you otherwise was not a ham
radio operator during this time period.

As for QST, that was the final straw that caused me to tell
ARRL to shove their whole organization. I was stationed in
Hawaii in the 80s, and we would received QST sometimes as
late as three months after the published cover month. Meaning
we might receive the May 1983 issue in August 1983! The reason
for this was that the ARRL would not bulk air mail QST to
Hawaii, something that was done by virtually every magazine
publisher in the U.S. I wrote ARRL, asking why they did not
bulk air mail QST to Hawaii and received a stupid off-topic reply
from some woman at ARRL HQ. She informed me for x number
of additional dollars per year, the league would air mail my copy of
QST to me! BULLSHIT! My question was never addressed, as
to why the ARRL was not bulk air mailing QST to ARRL members
in Hawaii. I finally telephoned ARRL HQ and was informed it was
just not league policy to bulk air mail QSL anywhere. So you know
what, I told that fucking idiot to shove QST, shove the ARRL, and
they would never see my name again on the membership roste of
the ARRL!!!!!!!!!!!! I left ARRL in 1984 and am dam glad of it!

But it doesn't make a difference. I don't want my member
$$$ wasted on art direction. My ARRL membership is
far more than just a QST subscription... and, even if I
look only at QST, I get all I need.

Why, are those people so narrow in their brains that
they can't see the technical aspects of either magazine
as being a membership joural as opposed to the latest
copy of some newstand glitz publication. Ever look at
other membership journals? IEEE, etc.

> Luckily, we're going to have a couple of big foamcore

Yea, better not hang out the technical side too much I

mike coslo wrote, about QST's problems:

> , , , I hate poor design, and unfortunately I agree with you.

The sad story is told in the mastheads of the two
magazines. SKY AND TELESCOPE has a DESIGN
AND PRODUCTION STAFF headed by an ART
DIRECTOR and an ASSOCIATE ART DIRECTOR.
The PRODUCTION staff is listed down the page.

In QST's masthead, on page 4 of the current issue,
one may observe that the PRODUCTION SUPERVISOR
is listed FIRST, and there's no ART DIRECTOR in sight!

And it SHOWS!

Val

P.S. I'm going to be representing both amateur
astronomy and amateur radio, at a rather large high
school (1,500 enrollment) in a couple of weeks.
Hundreds of students, parents and visitors will see
our set up. It's going to be a joke when people see
those two magazines on our table, side by side.
Luckily, we're going to have a couple of big foamcore
boards with material taken from the Web, allowing us
to keep QST discreetly off to one side.

Val,

No need to personalize it! As far as I know, Bill and I have never met you. Why should we dislike you? Have we said we dislike you? We obviously don't agree on some issues, but that doesn't make you a bad person or someone to be disliked. My guess is that you are a genuinely fine person, albeit a bit full of yourself. Many of my best friends are like that too.

With all kind wishes,

>
>And because you judge it so. Of what consequence is it to
>the role of ARRL.

Why none, of course, it's just the first thing a lot people are going
to see in a couple of weeks, when I try to show them the flagship
publication of amateur radio, is that awful cover, alongside the
afrorementioned SKY AND TELESCOPE magazine, which just
blows it away. So, no, that cover don't mean SQUAT!
What was I * THINKIN' *! It's PERECT!

>> Where S&T has ONE large photo on the cover, and a beautiful one at that,
>QST
>> has one, two, three LITTLE photos, too small to truly be seen. And to
>make
>> matters worse, the photos are (in keeping with "amateur radio"?)
>amateurish

>judgements.

I think I'd leave it blank except for the "QST" part. That would help.
At least then you could actually READ everything ON the cover,
unlike the present situation, where you can read about half of it
without squinting, and some of it is illegible.

>> Inside, the situation is similiar. S&T, the smaller magazine with what
>has
>> to be similar or even less ad revenue, is MUCH cleaner, more attractive,
>and

>
>Again, assuming QST were to embark on changes which would
>satisfy your criteria of quality, just what do YOU thinkwould happen?

Gee, Einstein, I think I'd go buy a copy of SKY AND TELESCOPE, for
five bucks and the tax, and try to get closer to what they're doing. This
is NOT rocket, or even radio, science, and huge improvements could
be made for relatively little expense. Hire an intern with some skills is
ONE way to get a START! Where is Newington, on the north slope?

>
>> And there are a lot of amateurish
>> photos, of guys standing around holding stuff, items that S&T banished a
>> long time ago.
>

>years from now people will look at the 80/90s the same way.

As far as the design of QST covers goes, the 1952 version stands as Old Kingdom art compared to the garish, blurry and jumbled covers of the present day. And you can take your "cheers" and shove 'em!

Well, technical or not, there is always a place for beauty in my book. I believe if you're going to do it, you might as well do it well, and you might as well do it pretty.

In my other hobby, ATM'ing, I decided if I was going to make a telescope, it would be asthetically pleasing. So I made a pretty art deco telescope that wonr first place in the only contest I entered it in. It works nicely as a scope also.

It takes as long to make an attractive designed cover as it does to make an ugly one.

Your jeremiad suggests that QST ought to match S&T with
an Art Director and an Associate Art Director. The folks
I hire are engineers and such, so I'm not conversant with
salary scales for Art Directors, but let me take an uneducated
stab......

Art Director, annual salary $45,000
Associate Art Director salary $32,000
Benefits, payroll taxes, office space/heat-lights/equipment (43% in my
budget)

Total salaries $77,000
Loaded befits: $33,110

Grand total $110,110 per YEAR!

That'll buy a lot more than just a couple VTVM's every year!

With all kind wishes,

de Hans, K0HB

Take a look at, e.g.

http://www.findlaw.com/casecode/courts/dc.html

and type "FCC" in the Party Name search field. They're in court
all the time.

As far as I can tell the FCC wins some and loses some. A quick
scan of the most recent 10 cases suggests a score of 6.5 wins
for the FCC to 3.5 losses. I have no idea if that is representative
or not, but it certainly isn't hard to find cases the FCC lost
in the rest of the list as well.

The reality of new hams is, based on all those I've encountered,
is that none happened to wonder into the hobby because of
a copy of QST...or for that matter, 73 and/or CQ magazine.
The sale of QST at newstands is relatively new to begin with
(a few years at most).

The almost universal means that new hams seem to come
to ham radio is via another ham, or after dabbling in the
non-licensed services. If anyone learned of ham radio
through a magazine, it was (back in the 50s/60s) via
general electronics magazines (e.g. Popular Electronics).
Today I don't even see those magazines anymore because the
nature of "do-it-yourself" electronics has pretty much been
passed by the high tech (low cost) microchips manufacturing.

As to you bringing ham radio direct to some high schoolers,
that's great...but I don't see any need to turn QST into an
over-the-counter media glitz show just on the chance
a handful of non-hams "might" gravitate to its cover. Far
better for the personal outreach effort.

Cheers,
Bill K2UNK

I don't think either Bill or I is arguing against beauty, but rather
against the *cost* of beauty. ARRL must allocate their (our!)
scarce resources to the things that are of most benefit to
members.

The minute the members see them hiring Art Directors/Associate
Art Directors for QST while cutting headcount in other member
benefit areas, there will be some major restructuring of the BoD!

"Monty Python" phrases and expressions are neither in common American colloquial use nor do they pertain to amateur radio policy.

Phrases and expressions from the "Hitchhiker to the Center of the Galaxy" series of books is neither in common American colloquial use nor do they pertain to amateur radio policy.

N2EY has used both in here as if everyone is thoroughly familiar with them.

>Again, assuming QST were to embark on changes which would
>satisfy your criteria of quality, just what do YOU thinkwould happen?

...I'm still working on "pizzazz of astronomy." :-)

Funny thing is, having just looked at a local HRO's magazine
rack this morning, I'd say that QST is a nice bit of periodical
construction-art-content. QST *is* an organization membership
magazine, says so up-front both inside and on the ARRL web page.

Less than 8% of all printed QSTs are sold over-the-counter.
QST can survive as a monetarily-independent branch within
the ARRL due to rather guaranteed demographics of reaching
about 170 thousand members.

>> And there are a lot of amateurish

>from the pages of QST.

Heh heh heh. "Amateurish photos" or amateurs...who sit around
in front of radios or hold stuff or pose in groups with the usual
smiles. Once in a while there's a picture of a tuna tin with some
electronic gizmos in it. I find no fault with any of that. :-)

>> QST has the look, in places, of the very small Astronomical

>> director!

>
>Guess it must be me...I don't recall ever being concerned about
>how "artsy" the pages of QST are or are not.

Most folks aren't concerned. Good periodical construction is
something that won't be noticed. Last I looked (this morning),
QST was still a membership magazine with good layout about
amateur radio on light but glossy stock. As far as I know, neither
the FCC nor the ITU-R has allocated anything of the spectrum
about 300 GHz...where optical astronomy is done. :-)

>> In closing, if you're passing a newsstand over the next few days, take a

Unlikely, long-timer. :-)

Hans Brakob is younger than I am. I was born in 1932.
We are not related.

It's a common practice in here for frustrated egoists to start
in with personal insults whenever they've been bested in any
messaging. Attempting to use "b*stard" or "bastard" in any
form is a personal insult to myself and to both of my late
parents. There's no cause for such things and certainly not
condoned in The Amateur's Code.

This sort of comment does no good, Cecil. The poor guy has
this terrible hang-up and can't let go of it. It's the classic
equivalent of the monkey with his hand inside a container who
can't unclench his fist long enough to withdraw the hand. :-)

Haven't you heard might makes right, Dick? The Taliban believes they
are right just as much as you do. The U.S. Military has the might.
The FCC has the might concerning U.S. amateur radio.

Speaking from some part-time experience in periodicals other than electronics hobby things, I find little fault with the general style/layout ("construction") of QST as a periodical. That's in esthetic values. Likewise the "cover art."

QST *is* a membership magazine. Based on their ad rate card, the ads placed, and some rough figuring, that periodical should be monetarily self-sustaining. CQ and 73 have managed to stay in the periodicals biz as independents without the demographic benefit of the entire organization membership.

On the extra cost to members, in terms of low NYC salaries, your previous budgetary example is about 20% low. There would also be an increase for other costs such as more color pages and commissioned art to bring up the whizzy part of it. I'd say offhand that $200K per year is more like the extra monetary burden of art whizzyness.

That $200K seems to approach the probable fees charged by a certain law firm in DC. Somehow I don't see Chris Imlay's firm being told to "get stuffed." :-)

With all kind regards,
Me

Ahem. :-)

The IEEE's SPECTRUM is the membership magazine of
the IEEE. I just got my April 2002 issue last week. It's
slimmed down to 82 pages but does have an art director,
assistant art director on the masthead (pg. 7). Of course,
the IEEE has several dozen other periodicals in regular
production and the Transactions (making up most of those)
can be dreadfully boring unless one is really into some
paper. :-) The SPECTRUM is rather whizzy in layout, has
a mixture of pro photos, commissioned art work, and some
very well done explanatory drawings. Ad rates are higher
than QST's and base membership fee is over $100/year.

It was at Mason-Dixon star party. I mostly frequent the Mason-Dixon, the Astroblast in Franklin, and the Black Forest Star Party (which I founded BTW) There may be a few out there like mine now. A lot of people were taking pix, and one guy had a measuring tape.

The scope is a 12.5 f5.9 dob, tube style. The tube color is granite blue, in a texture style. The rocker box is a low cherry wood style, with the scope cradle of two circular rings around the tube and a discs for the alt bearings, which are Ebony star on teflon. It took several years to make, but it was kind of a magnum opus.

I haven't seen Ikeya-Zhang, but I'm curious.

> Bill K2UNK

Bill, you've been earning that one for a long time although I don't think much of the blast. If I thought you had the slightest clue why I would have done it myself a long time ago.

There are guys who sort of blast a trail thru the world and leave behind all sorts of uncompleted ideas for others to pick up on; you may have heard of Peter Drucker, and Einstein certainly qualifies. One of these guys was Carl Jung, a Swiss shrink who littered the psychological world with all sorts of insights and added I Ching and Synchronicity to the agenda. Jung opined that kids were born with different 'preferences' which describe valuable differences among normal, healthy adults that can be put to use or cause conflict and miscommunication for them.

By preference, think of being left-handed. One can and has to widen the preference and learn to do things off-handed but it is harder for them. I can write left-handed but it is not a lot of fun. This got picked up by a mother/daughter team appalled by the incredible misuse of talent in WW1. There are a lot of variations of Myers-Briggs Type Indicator around -- shrinks got to eat, too. But whether you buy their approach or not it makes for a good insight.

To drastically over-simplify there are four binary areas of normal human difference.

1. Where do you focus attention? Attuned to external or internal environment, prefer to talk or write, learn by argument or action or by reflection and mental practice, broad interest or deep interests, sociable or contained.

2. How do you take in Information? Real and actual versus big picture, practical vs imaginative, factual and concrete vs abstract and theoretical, remember in sequence or in pictures, present vs future orientation, Trust in experience or inspiration?

3. How do you decide? Analytic or sympathetic. Accept logic or impact on people. Fair or Accepting?

4. Orientation to the Outer World? Scheduled vs Spontaneous, Organized or Open-ended, Systematic or Casual, value method or flexibility, try to Plan or Adapt, go for Closure or like to keep things open to change, last minute changes stressful or energizing?

In their jargon, and that is what is important in shrink circles, the first items in each group describe one and the second its opposite. So in 1) they call it (with lots of room for confusion) Extraversion and Introversion, E and I. The second is Sensing vs iNtuitive, S and N. The third is Thinking vs Feeling, T and F, and 4) is Judging and Perceiving (also with great confusion space) J and P.

I will admit to being an ENTP. Like any generalization it can apply to all men, some men, or one man in any context. We will see ourselves in terms of of creative, imaginative, clever, theoretical, curious, conceptual, logical, assertive, and questioning. Others, primarily those of the SJ persuasion I suspect you of being, will see us as brash, rude, abrasive, rebellious, combative, scattered, untrustworthy with details, and generally a giant monkey wrench in a smooth-running machine.

The favor is returned and we see SJs as rigid, dogmatic, crummy listeners, picky and procedure-simple, and, as in the instant case, patronizing. So what an SJ intends as sociability more or less is taken as a pat on the head and smart people do not pat NPs on the head.

I know it is not intended as such but the Cheers is guaranteed to be a burr in the saddle of a good part of your audience.

Now Hans with the All Good Wishes is simply being a pain in the butt.

Mary Arthur
Thought of the month:
Ghoti was invented by George Bernard Shaw to demonstrate the absurdity
of English spelling. Richard Lederer has continued the game and found
eight other "correct" ways to spell "fish" in English: phusi, ffess,
ughyce, pfeechsi, pphiapsh, fuseo, ftaisch and ueiscio, all of which
help explain why I need a spell checker.

Calm down y'all ... I'm not talking about Morse testing :-)

For a LONG time, I'd always said "I'll never change my
callsign. I've had it for over 25 years, it's like my 2nd
name. (etc.)"

Well I got to thinking about it a few weeks ago and
the thought process went something like this:

Why?

Why not?

Supposed to be open-minded and flexible, right?

Are you sure?

What the hell ...

So I checked things out as to what might be interesting
and available, did some real soul-searching, and
finally went to the ULS and filed an application.

Now I'm WK3C ... Whiskey Kilo Three Charlie ...

I like it ... it's going to take some getting used to,
but I like it :-)

73,

You might be surprised. About a week after I got the present call I was working on the repeater and got a call using my old 1x3. The guys in the room had to say, "Dick, he's calling you."

It IS a nice call.

> States.

I also get both Val, via the local library
periodicals section because I can read em
and make copies for free as I'm a Contributing
Patron and Volunteer at the same.

Comparing QST to S&T however is akin to comparing
a McDonalds Big Mac Super special to a Dinner at the
local Mexican sit down resturant. Both will give you
gas, but the latter is much more preffered food and
atmosphere experience to the former.

For good reading I would suggest Smithsonian, Scientific
American, Stern (..if you can read German) and of course
Arizona Highways for stunning photography.

Cheers

Only a couple/few people up that way would know of or who I am. I don't know how many times I have stated here in this newsgroup that I am barely ever on the air any more...however, the only repeater I really am and ever was on is 145.190 (PL 110.9). Probably in the last six months I have been on the air a total of .... oh, maybe an hour? Used to be a member of DARC and their repeater is 146.880. However, it's turned into a road traffic and "how's the weather" repeater over the past year so I don't much even listen there any more.

Doubt I'll even be listening, you should have let me know you'd be in the area and I would have made a point to listen up and let you know what repeater I'd be on. Next time, get in touch...*if* I just happen to be on, the only real time would be between 7:00A-8:00A and then 4:00P-5:00P.

Ed, I don't mean this in any kind of contraire way at all. I think that if the powers that be cannot see the value in ham radio public service, then that's their shortcoming. I highlight as often as I can, have been involved with it, etc. But, to get much more involved in "saving" ham radio spectrum that I don't use would pretty much be nothing more than obligatory of me to do so...which I will.

We share our spectrum. It's bound to happen that we'll lose lots of it here in the near future--technology makes it so. Am I going to stand in the way when it may mean my job, my livelihood, etc.? Nope...sorry.

To you, maybe. Others think differently.

>I see I left out a word. The "view from
>30,000 ft." means getting the objective top-down view (rather than

"Top down" is not necessarily more objective than "bottom up".

Not from what I've seen. I saw LEXX on cable while away on business. OK
but not classic. Your humorous mlieage may vary.

Edell looks OK but Boortz is just a Rush Limbaugh wannabe.

Nope.

Part of being an "expert" is knowing the current trends in what one is
supposedly
an expert at. Thus to be a CW expert, one must at least be familiar with

current trends in CW. Such as new training methods and new equipment. Ten Tec started in 1968.

>> > But the elimination of the code test for

>
>The growth in the Tech class didn't slow down.

Yes, it did. Note that since the restructuring the FCC has been renewing
Tech Pluses as Techs.

>Subtract out the Techs and
>ham radio would have been going downhill fast. The flood of Techs was the
>only thing that kept the ARS membership at a reasonable level.

Untrue.

Jon Bloom (not Ed Hare, as I mistakenly reported earlier) posted some
growth figures some time back. Here's the bottom line:

From 1980 to 1990, the number of US hams rose 30%
From 1990 to 2000, the number of US hams rose 34%

So the creation of medical code waivers and the dropping of the code test
from the Tech license brought about just 4% more growth in a decade.

>> And you avoid the real question: Will you and others admit it wasn't a
>barrier?
>
>It was and is a barrier, Jim.

In other words, even if proven wrong, you won't admit it.

>The Morse code exam is the only thing that
>keeps me from QSOing with my friend in Colorado.

Why?

>He has promised to upgrade
>to General and get on HF just as soon as the Morse code requirement is
>dropped.
>There are many other Techs just like him.

Is it not possible to use VHF/UHF for that purpose? I thought you and your
friends were all high-tech types. Does it really come down to HF ionospheric
propagation being your only option? Sure sounds like it.

I do not recall ever seeing such a "call". Not in any of my FISTS bulletins.
There may
be encouragement for FISTS members to make their voices heard, but there is NO
official FISTS position on the issue other than "let your governments know what
you
think".
>

In article <uarncn9nkpmj92@corp.supernews.com>, "Valentine Germann"
<vgermann@socket.net> writes:

>I have in front of me the April 2002, issue of two magazines, the ARRL's QST
>and Sky Publishing's SKY AND TELESCOPE. Both of these efforts are specialty
>magazines with relatively small circulation, based in the eastern United
>States. QST has a higher page count, about 155 to about 135, and has more
>column inches of text than S&T, which has been "modernized" in recent years,
>cleaning up its look. As far as advertising percentage goes, QST has 37
>full-page ads, S&T has 29, so any revenue difference is likely in QST's
>favor.

Let's do some math......

S&T has 29/135 = 21.5% full page ads.
QST has 37/155 = 23.8% full page ads

A little more, but not much.

>I think that a comparison of these two magazines might be most
>useful to some on this newsgroup, considering that the ARRL is now embarking
>on a serious-minded attempt to re-vamp the image of amateur radio in the
>United States. Surely, QST is an important part of meeting this challenge.

Agreed in part.

One BIG difference between astronomy and ham radio is that astronomers don't
need licenses
to use a limited public resource that others also want to use. Interference
between astronomers
is also all but nonexistent - my use of a telescope in my back yard doesn't
affect your
use of one a few houses away.
>
>Let's begin at the beginning, with the covers. For many years S&T has
>featured ONE big photo on the cover, with text superimposed, as QST was

>and note the old covers shown there. Look at how attractive that 1952 cover
>is, compared to the, let's fact it, cluttered and ugly cover of the 2002
>edition. What a de-evolution!

I have every QST from November 1927 to the present, and most of the earlier
issues back to 1923
or so. I'm not an expert but I have read the dern things and gathered a few
impressions over the
years, while collecting them. (The ones from 1968 onwards I got as a member,
the rest I collected).

The cover design has evolved over time, and one of the most recent changes has been to
use the cover to announce seveal of the articles inside, rather than have a single photo. There were
also some covers in years gone by that were very "busy".
>
>The April, 2002 cover of S&T is very attractive, in spite of the numerous
>blurbs plumping for the articles inside. At the upper right is a thumbnail
>image that can be seen and understood, with a blurb explaining what it is.

>guys sitting at computers, indoors, with blown-out windows in the
>background, they should be PURGED from ANY magazine, and a new art director
>hired immediately. Or, more likely, it's time for QST to HIRE an art
>director!

I don't think art direction is the real problem.

Most of the photos published in QST are contributed by hams who are, well,
amateur
photographers. The results are actually pretty good considering equipment used
and
experience/skill.talent of those snapping the shutter. Astronomy is, after all,
mostly a
visual endeavor while ham radio is mostly and aural one.
>
>In closing, if you're passing a newsstand over the next few days, take a
>look at S&T and see the way a specialty magazine SHOULD look. Then go to
>page 92 of the current QST and look at the way your QST * USED * to look! I
>think you'll be amazed!

You are comparing one issue of each mag.
>
>Hmm, maybe the 1950s truly WERE the Golden Age of Ham Radio!

I dunno. I wasn't a ham then, but here are some factoids about that era of ham
radio:

- There were about 100,000 US hams in 1950 and about 230,000 in 1960
- Ham equipment was mostly big, heavy, and expensive by today's standards.
- TVI was a real problem, particularly in fringe areas.
- Most of the classic rigs of the era appeared halfway through the decade or
later.
- Mobile operation was a real challenge. No repeaters or small rigs. Most cars
had
6 volt electrical systems and the ham gear of the day needed lots of power.
- Homebrewing was common but if the parts were bought new it could be very
expensive.
- Generals and above had all operating privileges after February of 1953 but
they also required 13 wpm code (send and receive) and a "secret" written
test.
- Manufactured SSB transceivers as we know them did not exist until the late
1950s,
when Cosmos and Collins introduced them.
- Prices seem low (a Handbook was three bucks!) but so were wages. Adjust for
inflation and things look very different.

Yea ... I thought so ... I picked 5 "just in case" but this
was my 1st choice by far ... I figure it's an "all American"
call ... with both W and K in the prefix ... I was really
encouraged when the website that tracks what's
available (and predicts what will be granted) showed
it as "probable to be granted" the day after I filed ...
with the others all as "on someone's list of choices."

I don't read everything Kim posts, Cecil, so using her as your backup is a non-starter. I just told you that I did not realize that I'd made the typo. If you don't like the response and would prefer to continue your two standards--one for you and another for everybody else, simply print this response and I'll send you instructions on how to fold it before you stuff it.

A quote from you:

"If you are going to deny saying the word 'comparting' for days..."

I didn't say the word "comparting" for days. I never said it. I wrote
it in error once.

> You wrote it once and then denied that you had done so for five days.
> I'm not lying, Dave. I pointed out your typo about a dozen times over

> omniscient self to admit that you had made a typo.

You are full of it. I did state that it was a typo. You already knew
that when you began your word play. You continue it now. Shall we make
a game of your typo in your last sentence above? We have one standard
for Cecil and another for others.

You knew then that I meant "comparing", not "comparting". In every response to you, I used the words "comparing", "compare" or "compared". I did not lie about anything. For you to continue your silly accusations makes you look small.

> > So, you, realizing that I'd made a typo, decided to ride it out. You

> happened, trying to blame me for your denials of making a typo.

I don't believe there was any time at which you commented anything like, "Dave, you made a typo". You just went on playing word games and began the ridiculous accusation of lying. You are still doing that.

Your back pedalling on the items N2EY just called you on are much closer to whoppers than what of which you continue to accuse me. You're a humbug.

Izzat right? I've never had a teacher, clergyman or boss dare me to do anything. "Friends" and co-workers will often dare one to do something stupid while keeping a safe distance. They can often be heard saying afterward, "I can't believe he was stupid enough to do that". Sorry, I can't buy into your Rod McKuen-ism.

Hansl:

I'll go one better than that. I think that QST needs to be printed on
recycled newsprint with strictly black&white photos -- and the money
spent on producing the slick, full-color mag spent on something the
ARS needs a lot more -- like some public service announcements
and the airtime to get them on people's TV screens. The person
who originally made me aware of ham radio was Dick Van Dyke.
With all the so-called celebrity hams we have in our ranks, there
should be two million eager, appliance-operating, CC&R defeating,
spectrum-protecting, dumbed-down, politically-correct, code hazing
ritual-free hams in this country. What are Patty Loveless, Jon Bon
Jovi, and Ronnie Milsap (to name three of dozens) doing for the ARS
besides absolutely nothing? How many hams are there out there
who aren't national celebrities, but are well known in their local
circles, and able to exert a great deal of practical (financial) influence --
the type which could get ARRL-produced PSA's played on local cable
TV systems and large print ads in local newspapers and magazines?

If I were the ARRL, I'd seek out these celebrity hams and ask them
what they've done for me lately. With the right people asking them in
the right way, I think they'd be more than willing to put their talent,
industry connections, and personal influence to work for the ARS.

Does anyone know if this is/was ever considered by the ARRL?
It must have been at one time. They got Dick Van Dyke to sit down
in front of a KWM-2 at one time, and that had more to do with getting
me to become a ham than a dozen "Elmers" trying to "sell" me on
the ARS.

Yeah, Carl, congrats on getting a new callsign. And yes, there'll be a "period of adjustment". But it gets familiar pretty quick, and you'll like it.

I won't even rag on you about using it on CW. But hey, try it out on PSK31 or Hellschrieber, willya? :^

I re-upped after a long absence. The whole atmosphere has changed in
Newington and in fact it needs the support whether I agree politically or
not. And it has become, more because the competition has folded, the best
of a bad lot of magazines.

I will never forget a hamfest in Washington MO some years ago where the
meetings were held in a park pavilion with shutters on the windows. After
the speech we came to hear the MC introduced the section rep and people
were literally diving out the windows to clear the room.

The subject was Techs being able to transfer their emergency talents to HF.
(see above) The fact that Techs have emergency talents to transfer implies
that there is emergency communication on VHF/UHF.

> From 1980 to 1990, the number of US hams rose 30%

That's not a valid conclusion. What percentage of hams were nocode techs at
the end of 2000? 20%? Whatever it was means the coded part of the ham population
fell off rather rapidly. -16%? Like I said, ham radio would be in decline if
it were not for the adoption of the nocode tech license.

After denying for days that you had even made a typo in the face
of your typo being reposted as evidence. I ask again. If you are going
to deny for 5 days making the typo, why not just deny it forever?

Why didn't you admit making the typo the first time I pointed it out to
you? the second time? ... the tenth time? ...

How would I know that? "Comparting" is a valid word. Am I supposed to
assume that all of your posted words are typos?

> I don't believe there was any time at which you commented anything like,
> "Dave, you made a typo".

"Comparting" is a valid word. It wasn't apparent to me that it was a
typo so I simply denied comparting anything. You came back and said that
I indeed had done that. Here's the actual interchange:

W5DXP said:
> > I have never comparted Affirmative Action and Morse testing so
> > you know what that makes you.

Dave responded:
> You have indeed.

That was a lie. Long after that, you denied posting the word
"comparting". You continued to deny it after I repeatedly proved
that you had used the word. You continued to deny it over a period of
five days with the evidence that you had used the word staring you
in the face from a dozen of my postings.

> Your back pedalling on the items N2EY just called you on are much closer
> to whoppers than what of which you continue to accuse me.

I haven't back pedaled. The things that N2EY "called" me on simply means
he has on his blinders and is not seeing the big picture. If you have two
investments the sum of which increases by 4%, you are not going to be
happy with both if one investment yields 20% while the other yields -16%.

Not sure that some of your comments above weren't a bit
"tongue-in-cheek", but never-the-less Larry, well said!
Another of the 50s/60s celebrity hams was
Arthur Godfrey. Also we had Barry Goldwater carrying our

message. If celebrity endorsements work for the vast variety of stuff sold, why not amateur radio too.

Cheers (hope that cheers doesn't offend you :-)

> Extra Class with ease and without complaint, and that you will
> embrace a wide range of modes.

Nope, that's not it. You welcome him because you have his undying admiration. Val may never get beyond 5wpm, if he gets there at all. He may never actually use a key or paddles. Doesn't matter. He's saying the "right" things, and therin lies the difference between the above welcome, and the below left-handed compliment. Larry needs to have his life verified by the few remaining "Vals" in the world.

Well, that may be true but I'm not ready to agree with it - yet. I've been
there plenty of times before, clipping and pasting the "accuracy transcends
speed" slogan when Dick was doing the banana boat swing jive. I know what I
saw then, and the format of the site is different, and the "support" code
testing button is gone.

Brian

Hello, N2EY!

SKY AND TELESCOPE has significant competition, from
ASTRONOMY, which was founded in 1975 to be "the world's
most beautiful astronomy magazine," and for a while succeeded.
It took S&T quite a while to upgrade their "look," to get into the
same ballpark with ASTRONOMY, but they finally got it done.

QST has no effective competition, isn't that right? I think so.

However, the covers and general appearance of QST are
truly sub-standard and should be upgraded, especially if the
goal is to attract newcomers. This month's cover is just
flat UGLY and does Ham Radio NO service at ALL! The
fact that covers FIFTY years ago looked BETTER simply
helps point up what should have been obvious.

I bet something done here within a year or two, just because
of the concern over the future expressed at ARRL.

Thanks for your reply.

Val

Hello, KB3EIA, Mike!

>It was at Mason-Dixon star party. I mostly frequent the
>Mason-Dixon, the Astroblast in Franklin, and the Black
>Forest Star Party (which I founded BTW)

Congratulations on being the "founder" of a Star Party!
I have several times strongly considered the Black Forest
affair but have not yet made it there. I have been either
chair or co-chair of two Astronomical League regional
conventions and so have some idea of how much work
running such a star party can be! Again, congratulations!

> The scope is a 12.5 f5.9 dob, tube style. The tube color

>make, but it was kind of a magnum opus.

It sounds very nice. My friend's 10-inch is all in Apple-
Ply, with a natural finish, and with all rounded corners
and flying buttresses and what-not. This guy's brother
is into Art Deco radio, really neat stuff, and the telescope
was an "homage" to that design type.

Finally, try to get a look at this comet, which has just
passed over M-31 headed north. It's easily visible in
binoculars and has a fine tail!

More later!

Val

Well, gee, whiz, I'm really impressed -- NOT. And, no,
I don't think I'm the first, or the last, to see BS and hot
air for what it is. There are exactly TWO people on
this list who are currently producing messages that
might have some value and interest. Guess what,
YOU ain't either one of 'em. Let's see something
from you of VALUE, or INSIGHT, or even WIT! See
that pedal on the floor, the clutch to the transmission
of what's left of your brain? Depress it, engage the
mechanism, PRODUCE some THOUGHT that might
be of some value to somebody, or even to HAM RADIO,
and then WRITE it BELOW!

Your long-valued avocation seems to be IN TROUBLE
and I'm trying to HELP OUT, even if it means pissing
off guys like you, who seem to have very little clue as to
exactly, or even fuzzily, what's wrong!

Clutch, transmission, BRAIN? Go!

You made your point long, long, LONG ago, Larry.
The callsign is an "object of controversy" only as long
as people continue to obsess and beat their chests about it.
As long as people gripe about it, she continues to be
the center of attention. Giving this attention is
contrary to what you want.

(snip)

Astronomy is a VERY visual subject, much more so than Ham radio.
They are going to be better at producing a more visually appealing
magazine because of that fact. Ham radio is not a real visual hobby,
I've been to enough ham fests to verify THAT fact!

Washington is my favorite of hamfests. I don't need Dayton, I just look
forward to Washington. Missed that SM deal though, :-), was too busy
with the excellent flea mkt. I know Dayton's a lot bigger but I doubt
much better.

Why should those people be any more looked up to than anyone else, Larry?!
WHAT makes you think they will have more inlfuence than anyone else?!
That's ludicrous. And, haven't you spited the idolatry given to sports
heroes? You ask for this and you'd be the first to spit in the face of an
actor if such a campaign were anywhere near successful. I think you're
probably just looking for more people to put down anyway--you couldn't care
less if anyone joins the hobby.

You folks gripe and complain about the ARS "going away," about spectrum "disappearing," and so on to ad nauseum. Yet, what have any of you done lately to get the word out about the service? OH GOSH...I FORGOT...that's the job of the ARRL and of the actors and politicians in this world. GOSH, no way no how could you get a spot on the council meetings of your city and speak up for ham radio...no way could you mention ham radio every chance you get at work, now way could you get hold of scouting and church youth organizations and show off ham radio, no way could you go to local stores and see if you can hand out some brochures on ham radio...

No way could any of you come up with anything else TO DO, other than sit around and wait for the next *famous* person to do it. You know what? If you guys are so impressed with these famous people, then learn from them--do what you think they should do for the ARS. YOURSELVES!!

That's interesting, Cecil. Please point me to the post where you told me about the typo to help sort things out. I don't recall that taking place.

How about, "For days you denied using the term 'comparting'"? I never
"said" it and have never made deliberate use of the word in my life.
>
> > I didn't say the word "comparting" for days. I never said it. I wrote

For a self-proclaimed wordsmith, your sentence construction can be poor
at times.

It is obvious to all but you that I did not realize I'd made a typo.
Get over it.

> Why didn't you admit making the typo the first time I pointed it out to
> you? the second time? ... the tenth time? ...

Again, for the sake of clarity, please point to the post where you said
anything like, "Dave, you've made a typo" or anything closely resembling
the statement. I certainly don't recall seeing such a statement. You
knew my intent when YOU used the term in response since I was quick to
point out that you'd "compared".

>>
>> Yep, I begin to worry when the ham population starts to decrease.
>
>*THAT'S* when we'd better start noting that we may lose some spectrum!

Then start noting.

From

http://www.AH0A.org:

Total US hams, end-of-month:

September 1998 (the minimum in recent history, 20 months before restructuring):
672,678

March 2000 (last full month before restructuring):
677,784

April 2000 (transition month):
678,539

May 2000 (first full month after restructuring):
677,349

March 2001 (the maximum in recent history):
684,359

November 2001: (minimum in past year):
682,512

March 2002(most recent full month):
683,180

For those who say the Tech has somehow "kept ham radio afloat", note
that the number of Techs/Tech Pluses peaked at 338,334 in March 2000
and has since declined to 319,880. Note also that in April of 2000 the FCC
began renewing Tech Pluses as Techs, so the number of Techs is growing from
three sources (new licenses, Tech Plus renewals, and Novice upgrades) not
just new licenses.

You'd certainly have realized it in context. My subsequent posts did
not include that word but used the terms "compare" and "comparing".

> > I don't believe there was any time at which you commented anything like,

That is certainly a part of what was posted and you'd have to be a fool
to believe that "comparted" is what I meant after my repeated use of
"compared" afterward. Yes, "comparted" is a word. It does not make any
sense at all in terms of what was being discussed. Again, you'd have to
be a fool not to know that. I'll assume that you are not a fool and
that this is yet another feeble attempt by you at entertaining yourself.
I'd advise caution in calling another a liar.

Kim, I don't even use such moronic phrases as, "thinking outside the box". To do something on a dare does not mean that you are doing any "thinking outside the box". I did not say that I had never been issued a dare. I stated that I'd never been dared by a teacher, a clergyman or a boss. I am quite predictable in that I don't do something because some fool dares me to do it. Fools have plenty of time to waste.

While Val's poor attribution is annoying, what bothers me more
is twofold:

1) the idea of a smart-ass, newly-licensed, not even dry behind
the ears newbie proclaiming him/her self an expert on anything
and everything about ham radio (clearly the implication from
the tone of Val's posts) ....

2) Val's "re-positioning amateur radio" sounds a LOT like
some bad, retro, time-warp, "back to the future" theme ...

Steve,

Actually I believe that somewhere there is a FAQ on the subject.
(there's a FAQ on damned near anything you can think of).

The (self-appointed) "keeper of the rec.radio.amateur proper
behavior guidelines" was, if I recall correcly, an ex Coastie
Morse op named Jeff something, who I believe had a Guam
call, though he lived in Hawaii ...

Dave,

Calling a common phrase such as "thinking outside the box" "moronic"
illustrates an inability to process abstract concepts ... thus, I guess you
probalby can't "think outside the box" ... your thought process would appear
to be constrained to the mundane, familiar, predictable, and uncreative.

>Fools have plenty of time to waste.

I/m sure you would know, Dave ... BTW, how DO you waste all of your time?

Ahem...this newsgroup is about amateur radio policy.

Neither the FCC nor the ITU-R allocate anything above
300 GHz and optical telescopy is done well above those
frequencies.

Quit sipping mead and get with Meade. Merde!

From time to time I get comments, both in e mail and on the NG about my frequent jabs at His Putziness, Lennie the Creep. (Ooooops...Did it again!...!) Many have made comments about "civility" and good manners, etc.

A week ago I started a thread to congratulate a new Ham on his achievement. However, like most other threads in r.r.a.p., it has degenerated into name calling, harrassment, and completely disassociated "topics" of conversation...yet they perpetuate the thread under the "congratulations" theme.

Below are some of the comments.

Moral of the story?....Those in glass houses should not cast stones......

>Wouldn't that be Pole Poles?

>Don't waste attention on the TIT twit.

No, being an NP I know better. You, I suspect, are about to become another player in the NPs run academia and flunk out the SJs game. SJs start businesses and end up firing us. A giant zero-sum game that all revolves about who is normal.

If you are into some speculation, I would suspect that this is one more item coming out of the human being being the only mammal where the Y chromosome gets involved in brain wiring. Ever seen a left-handed orang? Most apes can eat a banana left, right, hand, foot interchangeably and with zero extra effort.

Besides I approach this newsgroup like a Pentecostal revival: I don't have to believe a word of it to enjoy the show.

Good idea, Larry, but I'd do it in a different fashion.

The problem with PSA is that they generally get aired at zero-dark-thirty
between info-mercials for kitchen slicers and boob-building equipment.

I'd like to see ARRL (and yes, FISTS and NCI) fund the filming/production
of the ads, and local clubs FUND the airtime on local 5-o'clock news
programs.
The PSA-charity just will not get you any quality airtime.

And oh, by the way, the ads shouldn't be recruiting ads, but rather
ads which market the PICON value of amateur radio to the general
public. Maybe then we won't need to fight the CC&R battle in our
current house-to-house fashion.

Well Larry you live quite close to an HRO store where I often stop on
my way from business to visit my daughter in N.J.

I don't recall coffee but I surely felt welcome they had some radios
to play with.

When I asked about a DC power supply for my HT they pointed out one
I had left over from an old HT would do just fine. I go back regularly
and it doesn't matter if I buy something or not I still feel welcome.

If you display the hostility you display here I could see how you
might not be as well treated.

Hostility? Larry certainly expresses his thoughts openly and
with a sense of conviction, but I don't ever recall any personal
hostility in his writing.

While such personalization is not uncommon on rrap, I don't
recall K3LT being party to it.

The question may be, "is the ARRL making money or losing money be putting the QST on the newsstand?". If they are losing money, then stop putting it on the shelves and revert to mailing to membership only. If they are making money, then make more money by investing in some good layout and art work. $100,000 /yr is a drop in the bucket compared to the overall Newington / Washington salaries.

BINGO!! Clay, you got it! Its good to see Val and I aren't the only ones who think this is important. It is not unusual for a magazine to have attributes that need improvement, nor is is a sin for Val to point them out. But if they go to the trouble of printing it, they might as well print it right.

I'm amazed in this thread that we have actually had people stand up for poor design as if it were a mark of superior content, via the "if they spend time on design, they take it away from content!!! Or "if they pay an art director" (or apparently an illustrator) "they steal from" (pick your choice) "which is much more important."

Lets have a little think session on how QST can be more cost effective:

First, eliminate spell checking. It is a waste of time and money, and Hams are pretty good at figuring out a word from context since they do it when operating CW.

Second, lets dump the color, and go to exclusively B&W. If you want a shocker, check out the difference between color printing and monotone.

Third, while we are at it, skip the printing and make it double sided Xerox copies. Lets try to get the type size as small as possible so it takes less pages.

Fourth, do we really need pictures? Hams listen to most things, and pictures of hams at their rigs is just ego boosting stuff anyhow.

Fifth, why have illustrations any way? Fire the illustrator, and if a ham has an article in QST, let the other hams who are interested in what he or she is writing about just get in touch with them. Whay wast ink on some subject I'm not interested in. Hams are used to doing QSL cards, so they should adapt to this pretty well. "Schematics via the Bureau" is a great idea.

Sixth, lets just forget about it, and quit producing the magazine. It was a big hassle anyhow.

See, I just saved ARRL a whole bunch of money.

I told you that you had posted "comparting". You denied it. That was
a lie. Here's the proof.

Dave originally posted:
> I'm calling you on this diversion from your original erroneous comment
> comparting Affirmative Action and morse testing.

> W5DXP said:
> > Dave, you used the word "comparting", not I.

Dave responded:
> I never used such a term. (a lie - see above)

W5DXP said:
> > I have never comparted Affirmative Action and Morse testing so
> > you know what that makes you.

Dave responded:
> You have indeed. (A lie since I never subdivided the two items)

W5DXP said:
> > I did *NOT* subdivide Affirmative Action and Morse
> > testing so you are just lying through your teeth. I expect an apology.

Dave responded:
> You'll get none from me. I never accused you of subdividing anything.
> (A lie because "comparting" means "subdividing")

From Websters: "lie - an untrue or inaccurate statement that may or may
not be believed true by the speaker" You lied, Dave!

Posting it here is the same thing as saying it, Dave. You continue to lie.
Here's your original statement.

> I'm calling you on this diversion from your original erroneous comment
> comparting Affirmative Action and morse testing.

> For a self-proclaimed wordsmith, your sentence construction can be poor
> at times.

I'm an engineer, not an English major.

> It is obvious to all but you that I did not realize I'd made a typo.

It doesn't matter if you realized it or not. You were still lying. From
Webster's: "lie - an untrue or inaccurate statement that may or may not
be believed true by the speaker"

> Again, for the sake of clarity, please point to the post where you said
> anything like, "Dave, you've made a typo" ...

I didn't know it was a typo since it is a valid word. Should I question
every valid word that you post? I told you for days that you had accused
me of comparting, which you did (see above), and you denied it. You were
lying.

Jim, how many coded hams were there in 1990? How many coded hams were there
in 2000? Was there an increase or decrease?

So on top of everything else, you want me to be a mindreader? I told you
that you had posted the word "comparting" and that accused me of comparting.
You denied it. You lied.

> That is certainly a part of what was posted and you'd have to be a fool
> to believe that "comparted" is what I meant after my repeated use of
> "compared" afterward. Yes, "comparted" is a word. It does not make any

> that this is yet another feeble attempt by you at entertaining yourself.
> I'd advise caution in calling another a liar.

I can prove that you are a liar in a court of law, Dave. From Websters:
"lie 1 b: an untrue or inaccurate statement that may or may not be believed
true by the speaker" This is the second definition from _Webster's_Ninth_New
Collegiate Dictionary. You said you didn't use the word comparting. You did.
You lied. If you deny meeting the above definition of lying, you are lying.

Two was the next natural number up from one. One was false. Thus the "twice".
I didn't backpedal. "Twice" wasn't never meant to be exact.

<seventythree@eightyeight.net> writes:

>What are Patty Loveless, Jon Bon
>> Jovi, and Ronnie Milsap (to name three of dozens) doing for the ARS
>> besides absolutely nothing?
>>
>
>Why do you figure they owe more to the ARS than you, Larry?

Kim:

They may not "owe" the ARS any more than I do, but they're certainly
much better positioned than I am to give something back to the service.
And that's all I am suggesting.

>> How many hams are there out there
>> who aren't national celebrities, but are well known in their local
>> circles, and able to exert a great deal of practical (financial)
>influence --
>> the type which could get ARRL-produced PSA's played on local cable
>> TV systems and large print ads in local newspapers and magazines?
>>
>
>I'd pretty much guarantee myself that you sure aren't one of them. You're
>too busy looking for other people to do it. You sure are lazy, dumbed down
>ARRL member, Larry.

Perhaps, in a way I am, Kim -- but I am no possessed of a great,
commercially-viable talent such as the well-known celebrity hams are;
therefore, I cannot provide the same kind of tangible support to the ARS
that they are capable of giving. Were I in their position, I would not
hesitate to do anything possible to help secure the future of my hobby.
And I am sure that if they are approached in the right way, that they
would be more than happy to do so as well.

>> If I were the ARRL, I'd seek out these celebrity hams and ask them
>> what they've done for me lately.

>Oh, good grief. You're a jackass, Larry.

How charming of you to say so, Oh one who is bringing the ARS
"...one step closer to extinction!"

>> With the right people asking them in
>> the right way, I think they'd be more than willing to put their talent,
>> industry connections, and personal influence to work for the ARS.

>>
>
>Why should those people be any more looked up to than anyone else, Larry?!

Because they are legitimate celebrities, who have the talent and
industry connections that could be very useful in publicizing the ARS.

>WHAT makes you think they will have more inlfuence than anyone else?!
>That's ludicrous. And, haven't you spited the idolatry given to sports
>heroes? You ask for this and you'd be the first to spit in the face of an
>actor if such a campaign were anywhere near successful.

I don't recall ever "spitting in the face" of Dick Van Dyke. I think he
is a very talented actor and comedian -- and the PSA he did for the
ARRL a couple of decades ago is still fresh in my memory as one
of the influences that brought me into the hobby. I recognize the
value of celebrities and their ability to popularize activities to which
ordinary citizens can have ready access.

>I think you're
>probably just looking for more people to put down anyway--you couldn't care
>less if anyone joins the hobby.

Well, Kim, if that's what you want to think of me, all I can say is that
you're absolutely incorrect. I have a very deep concern for the future
of the ARS -- one which you have not demonstrated so far.

>> Does anyone know if this is/was ever considered by the ARRL?
>> It must have been at one time. They got Dick Van Dyke to sit down
>> in front of a KWM-2 at one time, and that had more to do with getting

Hansl:

These are all good points, and I don't disagree whatsoever. However,
I would take whatever "airtime" I could get, zero-dark-thirty or not,
because there are potential hams who may just be out there watching
the infomercials for the "Ab Blaster" and the miracle rotissarie oven,
or whatever.

Stevem:

The "old" Delaware Amateur Supply has gone belly-up (that's tits-up to you, Kim!) and, AFAIC, good riddance! That was the dirtiest, grimiest, grungiest, most disgustingly unkempt ham radio store it has ever been my displeasure to set foot into! Plus, I experienced very poor service from that lot after the purchase of a Yaesu HT from them at the 1984 Dayton Hamvention. I do live within less than an hour's drive to the HRO store in New Castle, Delaware, and I patronize that store regularly. It is professionally run by experienced and businesslike hams, and is a refreshing change from Delaware Amateur Supply.

Kim:

Don't look now, but Dick and I are *not* "Nickle Extras." We achieved
legitimate Amateur Extra-class status under the much more comprehensive
and challenging Pre-Restructuring licensing requirements, including
the 13- and/or 20-WPM code tests. Now that the licensing requirements
have been significantly reduced, what is *your* excuse for not getting
your "Nickle Extra?" I'm not saying that it is in any way mandatory or
even expected, but it is certainly within your abilities -- as it was even
in the Pre-Restructuring Era. Just a thought...

Well, so much for you clowns and your thirst for "new blood" into the
ARS.
While you warmly welcome the most shifty-eyed denizen of the nether
regions above 27 MhZ with open arms, when comes a newbie with some
actual knowledge and even a bit of experience from looking over his ham
neighbors shoulder for years, and who espouses some novel ideas for
improving the Service not heard before, you set the hounds to him.
Whatta bunch of lightweights.

But what you get is an incomplete picture, unless you look at lots of those
letters and correlate
them over time. Often one "bad apple" generates a stream of letters.

And what you see is what the FCC is acting on, which is not necessarily a
complete picture.
FCC enforcement is a perfect example of squeaky wheel greasing.

It's just one data point. If, on a different month, the ratio were 50-50, would that
be proof that code testing must stay? Of course not!

>> - for many years there was very little FCC enforcement at all. Much of the

>of the service

I agree 100%. But it will take time. Riley & Co. can only do so much at any one time.

>> How long from initial complaint to final action?

> This I note as a problem. It will probably never be fast enough. Just
>verification that the complaint is not bogus will take plenty of time. I
>note that many complaints have been filed where the FCC ends up
>admonishing the complainant!

Exactly! At each step of the way, FCC must allow a reasonable amount of time for
all parties to reply.

I'll give you a local example:

Few years back, before Riley, a trio of new guys showed up on one of the local repeaters.
No big deal, all are welcome. They even joined the club that supports the repeater.

However, their operating left much to be desired. Common courtesies like acknowledging a
"call, please" were not their style. Worse, their conversations were definitely not "G-rated"
and often became sexist and racist.

Being told that such behavior was not acceptable on this repeater had no effect. The machine
was often shut down because of them. Control codes were changed because they found out
how to restart the machine.

All of this was reported to the FCC, with tapes, but little was done in those pre-Riley days. They
laughed at our efforts, saying "FCC didn't care when we did the same thing on 11 meters and
they don't care about your stupid repeater either". They finally got tired of having the machine
shut down and moved on to another repeater.

Worst part of all this is that an extended family of scanner enthusiasts who were thinking of
becoming hams were turned off to ham radio. Those three "bad apples" probably turned away
at least a dozen potential hams by their antics.

You get one guess what license those three bad apples held.
>

Why not? Were ANY of them using Morse code? If not, that says something
about the USE of the mode, does it not?

>If we start to include
>the mode, it takes the discussion in a different direction. The number
>of possible violations decrease when confining activity to a single mode.

I don't understand.

It seems to me that most of the violations cited occur using voice modes. That's to be
expected, since voice modes are the most popular. But Morse is a close second to
SSB in popularity on HF/MF, yet we rarely if ever see an NAL issued to a ham
actually using Morse. (When was the last one?).

Watch the enforcement letters for a few months and see how many are issued to hams
actually using Morse code.

Of course the test does not guarantee use of the mode.
>

That's true only if the police logs show all of the violations, and the police
aren't "profiling".

>Jim!!!! It's all in how I was trying to see a correlation as noted above.

Of course. Point is, no test is perfect. And the other factors can hide a
correlation.

Most of all, though, look at the mode used for the violation, not the test
passed.

So the look of the mag is an important consideration to them. Amateurs
are more concerned with content, I think. Personally, I would rather have
fewer color pages in QST and more articles. But that's just me.

Do S&T or Astronomy do "Consumer Reports" style Product Reviews like QST?
Those QST Product Reviews are worth the whole price of membership if one
of 'em keeps ya from making an expensive mistake.
>
>QST has no effective competition, isn't that right? I think so.

There's "CQ", which I see on newstands and buy occasionally. "Worldradio" is
also out there. There are also specialty mags like "Electric Radio".

With all due regard, that's a red-herring, Jim.

The same can be said for those "actually using" RTTY, SSTV, ATV, PSK31, or
whatever.

If a person wants to be a bad actor, they want the largest possible
audience. That audience is most conveniently and broadly available on voice
modes, and has no relation to what other modes the operator might be
trained, equipped, and capable in.

Check out some of the cesspool-QRG's on 80M and 20M -- all those clowns are
Morse tested.

True, but we have to start somewhere. Otherwise we end up with "gut
feelings, which I always trust, but can never use to prove the point.

> > and that dropping the morse Code testing is
> >allowing the less desirable elements into the hobby.

Perhaps. I could be a exception, getting interested in amateur radio,
then going for the advanced licenses after the one part which hindered
me was reduced to the point where I could hope to pass it. I know a
pretty fair amount about everything else.

Of course not. If I get the chance, I'll go back as far as I can. But I
suspect it won't be a lot different. That's one that will have to wait
until I get some more free time. Work is pressing, and the XYL has a
honeydew list that is keeping me mighty busy.

I was not involved in the ARS in those days, but those sort of
incidents (in this case nightmare might be more appropriate) lend some
understanding to a lot of peoples frustrations.

Well, this is the sort of thing that needs to be propagated. Yet I
wouldn't want to exclude the more sedate or reclusive members of the
ARS. It's also a great hobby for older people, not being strenous. (
I'll try to remember that next time I'm up a tree trying to fix my
antenna)

>
>Jim, how many coded hams were there in 1990?

All of them.

>How many coded hams were there in 2000?

Impossible to say.

FCC did not begin issuing Tech Pluses until some time
after February of 1991 - it took some doing to make them see that there was
a difference between a Tech with code test and one without. Throughout the
'90s many hams whose licenses read "Technician" had passed code tests

After April 15, 2000, FCC began to renew Tech pluses as Technicians. Novices
who passed new Element 2 got Technicians even though they retain HF privs.
Also, Techs who pass Element 1 ("Tech-with-HF") are code-tested and get HF
privs even though FCC isn't issuing new Tech Plus licenses.

End result is that at least some Techs are code tested.

>Was there an increase or decrease?

I dunno. Do some research and present your findings here.

>that the number of Techs/Tech Pluses peaked at 338,334 in March 2000

>and has since declined to 319,880.

That's a carefully worded sentence if I ever saw one. To be specific
Tech/Tech+ numbers declined from 338,334 in March 2000 to 319,831
in July 200, a 4 month period, and has been pretty much stable since
then. Given the timing and the fact that it happened all at once, it
is probably the case that most of those hams didn't disappear from the
service but rather upgraded after the removal of the 1b and 1c requirements.
How does Tech upgrading after restructuring relate in any way to the issue
of whether the Tech license "kept ham radio afloat" or not? I don't see
it.

> Note also that in April of 2000 the FCC
>began renewing Tech Pluses as Techs, so the number of Techs is growing from
>three sources (new licenses, Tech Plus renewals, and Novice upgrades) not
>just new licenses.

But we also know that the growth rate of the ARS from 1989 through
March 2001 was effected by two "statistical anomalies" that made the
license expiry rate artificially low (we know this because you said it
a few years ago, though you no longer mention it now), and since
then we've entered a period with an anomalously high rate of license
expiry as the Tech 10-year bubble moves through.

The fact is that the rate of new license issues increased by about
40%, or about 600 new hams per month, since restructuring, and this
has just about balanced the rate at which Tech's let their licenses
expire starting in March 2001. While this has resulted in a small
decline in the numbers I've got to believe it has actually been a net
good for the service. At least some of the hams that got their license
in the last year or two are likely to still be active, while Techs who
let their 10-year-old licenses lapse were probably long gone anyway.

So you'll have to forgive me for thinking that the numbers actually
indicate that restructuring was a modest success, at least initially.
It has apparently attracted new interest in the service at a time
when there are a whole lot of other things to be interested in. The
ARS is no longer the best place for an individual to blab their opinions
to a big audience, there are other places where you can get a far bigger
audience with less investment. It is no longer a cheap replacement for
(mobile) telephone service since the real thing has gotten cheap as dirt.
There's enough other stuff to play with that it isn't surprising that
ARS growth has gone negative. There are fewer and fewer advantages
to the ARS other than the primary one, that it is still one of the best
places to go if what you want to do is build or assemble equipment that
produces RF and put that on the air for the sheer pleasure of doing that,
but if the higher speed code tests really were discouraging 600 new hams
a month with this interest from entering the service, as apparently may
have been the case, it was probably time for the code tests to go. I
do admit the jury's still out over the longer term, however. The codefree
Tech initially had a novelty factor that wore off after a few years.

Not that the numbers game matters all that much. The FCC probably wasn't worried about numbers when they made these changes, and I've never seen anyone from the FCC mention that the future of the ARS depends on it getting larger. What they do keep mentioning is that what hams do matters, so shrinkage due to 10-year-old, novelty Tech licenses lapsing probably doesn't change anything at all since they weren't doing anything anyway. It is up to the people who remain to keep the service healthy by doing stuff to ensure the service continues to be viewed as valuable.

I'm certain that you subscribe to and have adopted all the correct buzz words and phrases--witness your frequent references to "legacy modes" as an example. You can "paradigm shift", "impact on" and be "proactive" all you like. Just don't expect that I'll think you extra bright or deep for your use of the terms. There are no new ways of thinking. There is no thinking outside any box. There is only thinking. Thinking may be abstract without building an imaginary box.

You describe the term as "common". Perhaps it is where you live. Many things which are common are also moronic. I've most often heard "thinking outside the box" used by people trying to impress others by hinting that they have somehow learned a new way of putting together thoughts--one without boundaries.

If ever I decide to look for a critique of my thinking processes, you'd be near the bottom of my list of those from whom I'd seek advice. It'd be folly to call upon an individual who thinks he can analyze someone's ability to process abstract concepts based upon a single sentence. My abstract conceptualization is fine.I can improvise a guitar solo to a jazz tune I've heard once. Can you?
>
> >Fools have plenty of time to waste.

> lying.

I've already stated that the word "comparting" did not make contextual
sense. I've already stated that each subsequent post used "compare",
"comparing" or "comparison". You knew. To state otherwise it
simply...a lie.

Please do so, Cecil. Prove me a liar in a court of law and I'll accept
the badge.

> From Websters:
> "lie 1 b: an untrue or inaccurate statement that may or may not be believed

What does the first definition say, Cecil? You probably know that the
first definition listed is the more typically used.

> You said you didn't use the word comparting. You did.
> You lied. If you deny meeting the above definition of lying, you are lying.

I don't even accept your definition, Cecil.

In other words, you lied then and are lying now by any dictionary's
definition.

Maybe that's why Jim said "it's not the test, its the USE of Morse
code"!

> Check out some of the cesspool-QRG's on 80M and 20M -- all those clowns are
> Morse tested.

At least they got credit for passing a test. There are an unknown "many"
licensed hams who got their code test credit by various nefarous means.

Did you ever know a ham who had trouble with the code who "went away"
and came back with a full coded license? It's not that uncommon.

Why on earth would someone want an amateur radio magazine to look
professional? Wouldn't that be false advertising?

Galileo is an example of thinking outside the box. In that case,
the box was the earth which the clergy thought was the center
of the universe.

Nope, I asked a rhetorical question. How could a rhetorical question
possibly be lying? Here's what I said:

"Wouldn't it be better to have double the number of emergency operators
available even if they don't know Morse code?"

Please point out the lie. I didn't say there would be twice the number
of emergency operators. I simply asked a rhetorical question. You are
still lying.

Jim, I wanted to repost this interchange to show you exactly how mistaken
you are if you think I stated that eliminating the code test would double
the number of emergency operators. I merely asked a rhetorical question
and you later jumped to an irrational conclusion. Now Dave is accusing
me of lying about the erroneous conclusion to which you jumped. Are you
guys members of a tag team?

I certainly did not say that, Jim, so I have no reason to backpedal. I would
appreciate it if you would stop misquoting me and making false statements.
I simply asked a rhetorical question. How could a rhetorical question be
taken as a statement on anything? Here's the rhetorical question that I asked:

"Wouldn't it be better to have double the number of emergency operators
available even if they don't know Morse code?"

Please point out where I said "we'd have twice as many". You often get into
trouble by inferring false things from questions. Seems you would learn.

That 4 month period did, as Dennis states below, see many
upgrades of coded techs direct to General during the April-July
2000 period. The tech upgrades fell into three catagories:

1. Paper upgrades of techs licensed prior to 1987. All they
needed was proof of having the license prior to ' (exact date
escapes me) and they simply were upgraded upon application
at any post 4/15 VE session.

2. Written test only upgrades of coded techs that only needed to
pass the General written element. Many took and obtained the CSCE
for the credit and then simply upgraded post 4/15/00 and others
continued to do it since then...with a spurt of such upgrades
happening 4/00 to 7/00.

NOT an acceptable answer. Its not OK to create a cesspool just because they
are code tested. Ever.

Orders from the royal keyboard of Val?

> Your long-valued avocation seems to be IN TROUBLE

It (ham radio) is in trouble??? Perhaps you can
tell us WHY you believe that? Your spiel is nothing

new and has been rolled out by some hams everytime
rules, regs or technology of ham radio has changed.

> and I'm trying to HELP OUT, even if it means pissing
> off guys like you, who seem to have very little clue as to
> exactly, or even fuzzily, what's wrong!

You are right as to not having a clue as to what is
wrong. I guess your joining the fold will fix everything
that's wrong...if and when you once tell us just
what is wrong in the first place.

Cheers,
Bill K2UNK

780. The End of "Amateur" Radio?

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-07 14:39:48 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <ub0lg34qc3gu76@corp.supernews.com>
Source record: 39994

The End of "Amateur" Radio?

I am looking as I write this at the "house ad" on page 130 of the current issue of QST. It is headlined "YOU'RE INVITED" and as you look at it you are naturally inclined to ask yourself, "to what?" Well, you're being "invited" to "increase the impact of amateur radio and to insure its future" through the "Education and Technology Program," the Big Project, that was written of in the March issue as being of major, if not VAST, importance. Now, I had the impression that there was a real sense of urgency here, and that the ball was ready to ROLL! But, no, we're just getting off the ground, and not only that, all the ARRL wants from us is our money.

As you look at the ad in question, placed at the back of the magazine, at the bottom left of the double truck, opposite an equipment ad that totally dominates it, you see a circular image, what I interpret as the patch-to-be for this project. In that patch, is seems to me, are encapsulated many the internal problems facing "amateur radio" right now. So, I'll begin my discussion with that patch.

It is headlined, in Big Type, "Amateur Radio."

Folks, this kind of thing has GOT TO STOP. It is the year 2002 and NO ONE wants to be identified FIRST as an "amateur." I say this knowing full well the long and honored history of "amateurs" in many fields, and the origin and meaning of the word. But none of that matters. "AMATEUR" has to GO!

In a couple of weeks I am going to be speaking to a lot of people about "amateur radio" without ever using that expression. No, I'm going to be speaking to people about the things they can DO with radio, fascinating things, educational things, for a relatively small amount of money. I am going to be stressing the links between radio and the computer, and the InterNet, because almost everyone who will come to our event, at an "upscale" high school, WILL have a computer, for SURE, and that computer will be hooked to the net. The key is the initial VISUAL impact, backed up with enthusiasm and a brief look at some activities and equipment. This is how I have been doing astronomy programs for about 20 years, and how, in part, I re-built the local astronomy club.

Very briefly, I joined this group about twenty-five years ago, immediately after it had lost both of its leaders, one to an accident and one to a terrible disease. So, when I joined, the club was doing very little other than maintaining itself. By 1982, I had become president of this group and was able to encourage the membership to show up for public "star parties" at local high schools and other locations. We did the first ones twenty years ago this spring. We now have our own remote site and observatory, plus a continuing presence in print, on the radio and on television. Our

membership is about double what it was when I joined and is very active and involved. We're able to raise money. In short, I am proud of what I have helped to vis-�-vis astronomy here in Columbia and look forward to helping with radio in a similar way. We'll see.

In any event, one of the things that truly helps that initial impression is a powerful and positive "point-of-purchase" display. That display has to STOP people and then when they stop, it has to SPEAK to them, visually, in a POWERFUL way. What the heck does the current "Big Project" patch SAY to people who "stop to look at it?":

It says, first and foremost: AMATEUR RADIO! Then it doesn't say much else, really, since the arcane and indecipherable (to the public) ARRL logo is THE BIGGEST THING IN IT, visually speaking. So, really, what' the BIG PROJECT all about? Well, it's about the ARRL, that's what! LOOK at that logo, on page 130 of the current QST! What are you getting out of it, visually? If you're the public -- ZIP! For that matter, if your a radio amateur, you getting just about zip.

What would that patch look like if I were designing it? Well, the center image would NOT be some impossible for (the public) to understand logo. No, the center image would evoke something, and therefore be ONE image, not the over-complicated hodge-podge you in fact see. For instance, something that immediately comes to MY mind is a silhouette image of a young person in a learning situation (seated, with a book, perhaps), and then one other artifact in the image, a RADIO artifact. And that's IT! The blurb at the top of the patch could say almost ANYTHING other than "AMATEUR RADIO." That is SO bad it is NOT worth talking about. The blurb could be just an acronym, if the center image was powerful enough. I would crank up something like "ARRL * ETP * ARRL" or, gee, ANYTHING else, and then a slogan at the bottom: "RADIO FOR EVERYONE" or something. The object is to ENGAGE people, not CONFUSE them.

Folks, Ham Radio needs a media consultant, a good one, BAD!

Take a good look at rec.radio.cb and you will see how many CBers / Hams that are there. You will also be treated to how they still operate illegally.

GOSH,
> no way no how could you get a spot on the council meetings of your city
and
> speak up for ham radio...

I served on my "city council" for 12 years and took every
opportunity I could to market ham radio.

> no way could you mention ham radio every chance you
> get at work,

Been there, done that.

> now way could you get hold of scouting and church youth
> organizations and show off ham radio, no way could you go to local stores
> and see if you can hand out some brochures on ham radio...

Kim, For wat its worth, I have also had letters to my local newspaper
every year thanking the area hams that help with our annual memorial
day parade of which my wife and I have been co-chairs for over
15 years. Through my efforts, we have a local town races group that has
its own dedicated space in a former police dispatcher room.
I am a scouting radio merit badge councelor and have done
demos with scout groups. That's just afew items.

> No way could any of you come up with anything else TO DO, other than sit
> around and wait for the next *famous* person to do it.

The "famous person" is but ONE way.
I simply added some names to the discussion that
Larry opened

> You know what? If
> you guys are so impressed with these famous people,

I could care less about those people...the discussion
centers on pointing others that are NOT already
hams to the fact that there are some "famous" people
that they may not even know are hams. I don't
need to be shown, I'm already in ham radio.

> then learn from them--do
> what you think they should do for the ARS. YOURSELVES!!

You are presuming, incorrectly. that we don't already.

So? That proves nothing regarding what anyone does as
a ham. No license needed for rec.radio.cb is there?

> You will also be treated to how they still operate illegally.

Not to condone illegal operation...BUT...if that illegal
operation isn't impacting hams or ham bands, then what's
the point? Dick claimed there are these bad people (CBers
and others) that have infiltrated amateur radio...yet he
offers no examples...nor does the r.r.cb offer any
example either.

Cheers,

790. FCC Amateur Technician Class 224 MHz Question

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-07 15:24:52 UTC
From: Lars121 <lars121@pacbell.net>
Message-ID: <8xZr8.548$Ku6.199123135@newssvr14.news.prodigy.com>
Source record: 40059

Can someone explain how a Technician class license holder is able to set up a repeater network or auxiliary stations? Each aux station would be a different individual with a unique call sign I assume, however my question is mainly about broadcast location. Are operators limited to broadcasting only from the address indicated on FCC license? An example would be where the FCC indicates operator "KABCD" lives in Los Angeles and operator "KEFGH" lives in Hollywood, but other information such as QRZ and other websites indicate that these two call signs (and others) are repeating in a closed/private status and that the locations are not Los Angeles and Hollywood, but somewhere else such as Pasadena and Santa Monica. I'd appreciate any help as I'm new to this. Thanks.

DL

Well, see, there ya go again thinking you're a man on an island. First, I
did make posts to the original round of this, second, I participate in
this newsgroup. You're wrong twice...

Cough Yeah, cool. That and the silver spoon will get you through life as
though you lived in the closet, but perfectly in the closet.

Dave has a book on life, probably handed down for several generations now.
It tells him exactly how to think, what is bad, what is good, and makes
things a whole lot simpler than determining his own thoughts. Maybe he's
got the blueprint...the rest of us have the design.

Not having set up a bunch of repeaters, I feel unqualified to answer;
however, here is a neat URL for the 'megaplex' repeater system here
in Rochester, NY, that links 10, 6, 2, 220, 440, etc. etc. ...
Please note that as a technician class license holder, you could not
set up a machine on 10 ...
http://www.frontiernet.net/~mje/n2hjd.html
Enjoy!

Then you have a much rosier opinion of Hollywood than reality.

You wouldn't mean something like the good 'ol movie, Frequency, would you?
Or, oh yeah, not to mention that great ham flic Twister. Those are the two
references I generally get from people now when I am mentioning ham radio.
The first thing I have to do is distance ham radio from either of those--

Movies, movie stars and popularity is not what will advertise ham radio at
its best. Ham radio at its best *is* the home-town individuals who've taken
the time to get out to the local public.

You live up to the reputation every day, Larry. And, I'd daresay most
people (I include the silent readers) on this newsgroup, have the same
opinion, Larry--that all you wish to do is set another lair for your
attempts at degrading and humiliating people who choose this hobby.

Oh, I look, Larry. You need to realize that *anyone* could do what you guys
have done, with more grace and humility than you have in the tip of your
little fingers. Anyone can do what you guys did. However, I'd say that
most people who get their college degrees end up using the degree...

Oh, I forgot to answer your really important question, Larry. Why don't I upgrade? Why didn't I upgrade before?! I have no aspirations to going any further. I only got Tech+ for the benefit of our elmers, I tried HF and I don't care for it. So, why in the world would I waste my time getting a license that I'm not going to use? Oh, I forgot...you think studying for a degree and not using it is a great use of time. I don't. So, I also think

it would be a huge waste of time to get a ham radio license which I would never (where never=proportionate amount of total time) use.

And, you're right, my abilities are quite sufficient. My abilities are also far superior to yours in being a much better ham.

As Tonto was heard to say, "Speak for yourself, white guy!"

There are a whole host of folks who identify themselves as "amateur".
Below are just a few quick examples.

GGAFC http://www.users.bigpond.com/ggafc/
KAAL http://www.kaal.org/
World Pro-Ams http://www.golftournamenttours.com/
AAU http://www.aausports.org/mytp/home/aau_index.jsp
TAAA http://www.tucsonastronomy.org/
NSAAC http://www.star.net/people/~nsaac/
AAM http://www.amateurastronomy.com/
ATMoB http://www.atmob.org/

Good luck on this on now.

With all kind wishes,

de Hans, K0HB

Careful, Brian. A couple of weeks ago you told us that you'd seen
"Deliverance" and that you knew where it was filmed, implying that the
movie was filmed or set in West Virginia. It wasn't. Now it seems that
you don't know the difference between bluegrass and jazz.

>happening 4/00 to 7/00.

I agree 100% - but what's the third category?

Recall, too, that all during this time new Techs were being issued, and that
Novices were upgrading to Tech, though not in great numbers compared to
the above two categories.
>
>> Given the timing and the fact that it happened all at once, it

>>
>> But we also know that the growth rate of the ARS from 1989 through
>> March 2001 was effected by two "statistical anomalies" that made the
>> license expiry rate artificially low (we know this because you said it
>> a few years ago, though you no longer mention it now), and since
>> then we've entered a period with an anomalously high rate of license
>> expiry as the Tech 10-year bubble moves through.

Whoa, hold on a minute.

The first statistical anomaly was the change from 5 to 10 year licenses in
1984. This conversion was complete by 1989, and there were no expirations from
1989 to 1994. But after 1994 the first of the 10 year licenses began to expire
- 8 years ago, and 6 years before restructuring.

The second anomaly was the dropping of the code test from the Tech in Feb 1991.
The number of Techs was reduced during the ten years after that change
only by upgrades and cancellations. However, unless Techs drop out at a higher
rate than other hams, there should be no sudden jump in losses after March
2001.

There was a lot of speculation about how many Techs would renew. I have always
thought the percentage would be comparable to other license classes.
>>
>> The fact is that the rate of new license issues increased by about
>> 40%, or about 600 new hams per month, since restructuring, and this
>> has just about balanced the rate at which Tech's let their licenses

>> good for the service. At least some of the hams that got their license
>> in the last year or two are likely to still be active, while Techs who
>> let their 10-year-old licenses lapse were probably long gone anyway.

The question is whether it's a one-time jump or a continuing trend.
>>
>> So you'll have to forgive me for thinking that the numbers actually
>> indicate that restructuring was a modest success, at least initially.
>> It has apparently attracted new interest in the service at a time
>> when there are a whole lot of other things to be interested in.

Depends on how "success" is defined. K0HB sez the FCC did not consider
growth as a goal of restructuring.

>>The
>> ARS is no longer the best place for an individual to blab their opinions

>> to a big audience, there are other places where you can get a far bigger
>> audience with less investment.

Yup.

>> It is no longer a cheap replacement for
>> (mobile) telephone service since the real thing has gotten cheap as dirt.

Yup again.

>> There's enough other stuff to play with that it isn't surprising that
>> ARS growth has gone negative. There are fewer and fewer advantages
>> to the ARS other than the primary one, that it is still one of the best
>> places to go if what you want to do is build or assemble equipment that
>> produces RF and put that on the air for the sheer pleasure of doing that,

Exactly. What's happened is that the only folks who will want to be hams now
are
those who are really interested in RADIO as an end in itself, either from a
technical or operating standpoint, or public service comms that cannot be done
other ways.

>> but if the higher speed code tests really were discouraging 600 new hams
>> a month with this interest from entering the service, as apparently may
>> have been the case, it was probably time for the code tests to go.

They will be totally gone soon. FCC has all but set the date. 600 per month is
only
7200 per year - about 1%.

> I
>> do admit the jury's still out over the longer term, however. The codefree
>> Tech initially had a novelty factor that wore off after a few years.

And the same may happen after the code tests disappear entirely. A short-term
surge then back to near the old rates.
>>
>> Not that the numbers game matters all that much. The FCC probably wasn't
>> worried about numbers when they made these changes, and I've never seen
>> anyone from the FCC mention that the future of the ARS depends on it

>> It is up to the people who remain to keep the service healthy by doing
>> stuff to ensure the service continues to be viewed as valuable.
>
>Agree.

Same here.

There is one more factor to consider. FCC has changed the forms and renewal
rules several times in the past 10 years. FRN, ULS, TIN, 610, 605, all sorts of
alphanumeric soup. Plus the renewal window is VERY narrow, considering the

license term.

End result is that if a ham got his/her license back in the early-mid '90s and then never moved or vanitied, they may find themselves in a quandry when renewal time comes around - if they even remember! Note how many "renewals in the grace period" there are every month. At least some of these are "whoopsies" and others are "how the heck do I renew?" examples.

>
The real issue here is just as Bill states: "if that illegal
operation isn't impacting hams or ham bands, then what's
the point?"

The problem is that such illegal operation has and does impact
hams and the ham bands. One impact is the RF amplifier regulations
imposed on us hams because of widespread violations by illegal users.
Did those 1978 regs stop the use illegal use of RF amplifiers by nonhams?
Of course not! But they impact the ability of hams to buy, sell and build Rf
amplifiers. (The rules prohibit kits as well as assembled units).

There are lots of other examples - RFI, anti-antenna ordinances and attitudes,
etc.

If I had a dollar for every time somebody asked "what's your handle?" upon
discovering that Isomeone was a ham, I could retire.

>>
>> Impossible to say.
>
>Impossible to estimate?

With any precision, yes, for reasons I have previously stated. Some hams whose licenses say "Technician" are code tested. How many exactly? I don't know.

But the number is at least this many:

- all of the Tech Pluses who have renewed in the past two years and not upgraded are now Techs.
- all of the Novices who passed new Element 2 are now Techs
- all of the Techs who have passed Element 1 but have not yet passed another written test are now Techs.

The number is not insignificant.

>How many hams were not nocode techs in 2000.

See above.
>
>> >Was there an increase or decrease?
>>

Maybe Dick will publish a list of the callsigns of the
ex-CBer troublemakers. I was on 11m as a ham in the 50's
so Dick will probably include me on the list.

Back in the 50's, when 11m CB didn't even exist, most hams said,
"What's your handle?" What's wrong with what most hams did in
the 50's, long before 11m CW? What's wrong with it now? Saying
"What's your handle?" probably dates all the way back to when
AM was young.

Okay, Tugboat Annie. You responded to the earlier incarnation and now
you've done it again. You really weren't a part of it then and you
really aren't a part of it now. Aside from that, you are quite correct.
```

Last time I checked, I wasn't on an island. I've heard that there a few folks living on a small island called Manhattan. Perhaps you've heard of it.

Was that true in 2000? We don't need an exact number. We are simply
trying compare the first ten years of the nocode tech license to the
rest of ARS members. If the ARS grew by 4% during that decade and
nocode techs made up 20% of the ARS in 2000, then there was about
a -16% decline in coded hams during that decade. Seems to me, even
with the uncertainties involved, the nocode techs saved the ARS
from decline during that decade. I know nocode techs make up more
than 4% of the ARS.

I dunno, Kim. I did some thinking on the meanings of several of your posts. I came to the conclusion that they were filled with New Age babble disguised as something you intended as being *deep*. I arrived at this conclusion without referencing a guide. I don't know who makes up "the rest of us" you refer to. Have you joined a "Dare To Be Tacky" club?

A bit of history is in order here and it will send your head spinning.
The nice piece of paper you got from the FCC is in fact two licenses, a permit to set up a station in the Amateur Service under a callsign, and a permit to operate it and any other station in the Amateur Service. The history of the ARS makes me N&#65533;BK but in reality the call sign belongs to the hardware. A number of changes have been made in the rules over the years without disturbing this concept and produces any number of situations that at first glance make no sense. Think of the old days of broadcast where Fizzledink Communications Inc. had the station license as WKRP and an engineer, Ignatz Q. Smurd, operated it. Content violations were Fizz's problem and harmonics belonged to Ignatz. That is the background.

When I got into this hobby, if I were to operate another station I was limited to the lesser of the privleges of the station license or my op license which at the time meant a Novice and Tech could not ever share a station. Now I can take your tech station which includes 1.5 kw rig on 20 which is perfectly legal for you to own and operate it as Your Call by N&#65533;BK. Things have moved on.

As the question involves repeaters let us say that I wanted to put up a 4-band repeater with central transmitters and remote receivers at four

locations. Given that I had obtained coordination on my freqs (part of the problem you would have is getting a freq pair coordinated with whoever does it in your area), each of the four central transmitters would ID N&#65533;BK/R with no need to get them individually licensed. Same if they were at four different locations. The UHF links to the transmitter would sign N&#65533;BK/A preferably not thru the main transmitters tho.

The short answer is so long as you tell the FCC where to find you, go nuts. But for enforcement purposes, there is a recognized frequency co-ordinator and woe betide the guy who just slaps one up and interferes; he is presumed to be wrong and has no rights worth mentioning.

If you are in SoCal you can pretty well give it up.

Dick N&#65533;BK

Broadcasting is not allowed with an amateur radio license.

Of course. But none of those modes is anywhere near so popular on HF as
CW/Morse.

Maybe - maybe not. Even if that's true, there's still a tremendous disparity in
enforcement
actions.

>That audience is most conveniently and broadly available on voice
>modes, and has no relation to what other modes the operator might be
>trained, equipped, and capable in.

Exactly! But the fact remains that the FCC doesn't find many violations among
hams using Morse
or PSK31 or SSTV or similar modes.
>
>Check out some of the cesspool-QRG's on 80M and 20M -- all those clowns are
>Morse tested.

Sure - at one time, they all allegedly passed a code test of at least 5 wpm.
But if you recall I noted
that maybe it's not the TEST but the MODE that is the key (bad pun intended).

Let me say this about that....

While I think QST is a great mag, there's no doubt it could be improved. One thing I know for certain is that most of the articles and pictures come from hams who do not work at HQ. Outside submissions, that is, or whatever the correct publisher's term.

So here's my challenge to you and others, Val: Write an article, take a picture,
do a cover layout, whatever floats your boat, and submit it to QST for publication. They actually pay money for most stuff they use, btw. In other words, show 'em how it's done. They've published some of my stuff, so I know first hand that it can be done.
>
>As for joining the League, my check is on its way.

GREAT!

>I guess
>I'll just have to tear off the covers right at the mailbox!

Aw, c'mon, they're not THAT bad! ;-)
>
P.S. I've seen a LOT of QST covers, nearly all pretty bad,
>over the last five or six years. We DO have a library here.

I've seen more than 800 of them. They range from great to awful, and each era has its classics and its blunders. All depends what you like to see.

Some would say that the '30s era red covered ones were the acme of QST cover design. I like those, but there are other classic covers.

The W1CJD cartoons are timeless, though.

--

And while we're on the subject:

Some time back ARRL published a collection of "Gil" cartoons. Great little book but it's time for a second edition.

There is probably a decent market for a compilation of all the "Rotten Radio" stories by The Old Man (T.O.M.). The classic stories by W4VT ("Freshman Marlowe", "To A Lady With Red Hair" and "Jim") could be included, along with the stories that ran under the title "Dixie Jones' Owl Juice".

You might have noticed while preparing for your Technician exam that the FCC
calls it "Amateur Radio." Make a suggestion to the FCC to change it if its
not catchy enough for you. Maybe we need a jingle, too.

> In a couple of weeks I am going to be speaking to a lot of people about

I honestly doubt that you had a computer hooked up at the astronomy club 20
years ago, but none-the-less, its a good idea. Personally, I like going
with stuff that works. Thats why I'm not using code.

> Very briefly, I joined this group about twenty-five years ago, immediately

True, but it's important to know the accuracy of the data when drawing
conclusions. If we knew that the letters published were 80% of those actually
issued it would put a much different spin on things than if we knew that they
were
8% or 0.8% of those actually issued. In fact we have no clear idea what
percentage they are.

I have little doubt that S25.5 will be effectively deleted at WRC 2003. (I
could be mistaken, but all the data points that way). FCC will drop code
testing like the
proverbial high temperature tuber if/when that happens.

>I could be a exception, getting interested in amateur radio,

>
>Was that true in 2000?

YES

As I have written several times already, the FCC began renewing Tech Pluses as
Techs on April 15, 2000.
So any Tech Plus who renewed or got a vanity call after that date has a license
that says "Tech" even though
he/she is code tested.

> We don't need an exact number.

You need a reasonably accurate estimate if you want to be taken seriously. Of
course I know better than that....;-)

>We are simply
>trying compare the first ten years of the nocode tech license to the

>Back in the 50's, when 11m CB didn't even exist, most hams said,
>"What's your handle?"

I don't think most hams said that, but I'm sure many did. Back then "handle" was slang for "name".

None of the CW experts I know use "handle" instead of "name".

I always wondered why anyone would substitute a two syllable jargon/slang word for a one syllable word that anyone could understand.

>What's wrong with what most hams did in
>the 50's, long before 11m CW?

11 meter CW started after WW2 and ended in the late '50s.

>What's wrong with it now?

The meaning has changed.

> Saying
>"What's your handle?" probably dates all the way back to when
>AM was young.

In some areas, surely.

cb "handles" were invented as a means of hiding true identities. They began to be
used so that the FCC and others would not be able to positively identify the users.
The meaning of "handle" in connection with voice radio was changed from "name" to "alias to disguise true identity".

Now why would somebody using a radio transmitter not want the FCC to know their true identity? Think about it.

As a red-blooded, dyed-in-the-wool, tax-paying, law-abiding, All-American radio amateur, I have no need to conceal my identity on the air or mislead the FCC. I'm proud, not ashamed, to be on the air. Therefore I have no "handle" nor need of one. I do have a name, though.

Einstein didn't prove his theory of relativity before he published it.

Let's do it the other way. How can you prove that Morse code would
have existed without human evolution? See, I can obfuscate just as
well as you.

Of course not. "Handle" is longer than "name" in Morse code.
But on voice, "Name here is ...", is so pedestrian. What's wrong
with a little flair using ham lingo?

> >What's wrong with it now?
>
> The meaning has changed.

Who give a rat's patootie about CB? The meaning has not changed within
ham radio? Most of us OF's still say, "Handle here is ...".

> The meaning of "handle" in connection with voice radio was changed from "name"
> to "alias to disguise true identity".

Are you going to allow CBers to dictate what happens within ham radio?
My handle is Cecil and has been since 1951. If you don't like it, you
can lump it.

>hams, and is a refreshing change from Delaware Amateur Supply.

I remember DAS's prices usually beat HRO by a fair amount. And with no
sales tax in DE, the hour "or so" drive to DE was certainly worth it.

>Val, this isn't East Germany. You don't have and AK stuck in your back,
and
>you don't have to give your money.

No, I don't have to contribute. However, I likely WILL contribute, in spite
of
that ad on page 130 which didn't even mention an AMOUNT! What I was
commenting on, too quickly, was the fact that this is a top-down program
that appears to be bypassing most of the clubs entirely. And, I have to
admit,
I was expecting something that began with education of a less self-serving
type, that is, ELECTRONICS in general. FIRST. Now THAT would get our
foot in the door LOTS of places!

>> As you look at the ad in question, placed at the back of the magazine, at

FCC
>calls it "Amateur Radio." Make a suggestion to the FCC to change it if its
>not catchy enough for you. Maybe we need a jingle, too.

I'm aware of what the FCC calls it. However, when interacting with the
public,
well, that fact need not be right up front as the first thing seen. Hey, I
think
the word "amateur" has a wonderful meaning when used with "radio," BUT,
to large sections of the general public it can have unfortunate
connotations.

>> In a couple of weeks I am going to be speaking to a lot of people about

>with stuff that works. Thats why I'm not using code.

As a matter of fact, we were using the first PCs just about 20 years ago,
though not at remote functions it's true. One of our members had a
North Star, I believe, running Word Star . . . MORE than 20 years ago!
And I had a VIC-20, trying to do astronomy . . . nearly 20 years ago.

>> Very briefly, I joined this group about twenty-five years ago,
immediately

>> people who "stop to look at it?":

>The ARRL has had an HQ person working the education slant for years. They
>do like to rehash things and call it new.

I think the idea BEHIND this "Big Project" is great. However, what I have found is that most middle-school teachers have quite enough on their plates already. What they need is for someone to come in and provide something that they don't have to expend a whole lot of time on up front. This is what I
have been doing for many years with astronomy. No doubt, some teachers who are Hams are going to take advantage of this. However, can it be a truly mass program? I have my doubts.

>> It says, first and foremost: AMATEUR RADIO! Then it doesn't say much
>else,

>> something like "ARRL * ETP * ARRL" or, gee, ANYTHING else, and then a
>slogan
>> at the bottom: "RADIO FOR EVERYONE" or something. The object is to
ENGAGE
>> people, not CONFUSE them.

>Dave doesn't want radio for everyone. You'll have to ask him.

What I hope to do is do something with radio similiar to the things I have
done with astronomy. That is, you show up with some very simple
equipment that will engage students in a hands-on activity, right on
the spot and "out of the box." Then you have something that follows
up, maybe a small project or class. I am thinking about radio
astronomy as the tie-in here. You get the science specialists involved
because you are NOT asking them to spend their money, or a whole
lot of their time. In short, I don't think it's necessary or even advisable
to try to hard sell Ham Radio with this kind of program. That will happen
by itself once you get them in the door for some other reason.

>> Folks, Ham Radio needs a media consultant, a good one, BAD!

>Val, I admire your enthusiasm, but rocking the boat will get you
blackballed
>faster than being a commie in 50's Hollywood. You just better settle down
>and learn the code like a good boy. Keep your nose clean.

I have a very clean nose these days! Why? I always carry a handkerchief!

Val

P.S. I'm going to set up my own project here, beginning in two weeks.
I'm going to go for the junior high kids and see what happens.

I believe Hans is correct. THE reasoning behind
restructuring was the FCC goal to reduce/eliminate
unneeded rules and regs.

Cheers,

> Spend a lot of time there wishing "Gee...wish >I< could do that
>too...???

Not really. It is convenient since right across Buena Vista is a huge new Ralph's supermarket where we shop regularly. The intersection of Buena Vista and Victory has four mini-malls. The nine-block long Empire Center close by doesn't have a bookstore/newsstand outlet and the nearest large newsstand is at a Barnes & Noble next to the Media City Mall in Burbank. The totally huge Fry's Electronics near the airport no longer stocks QST or CQ or 73 magazines but lots of other periodicals on a rack that must be 30 feet long, 6 feet high. The end result is just going across the street from Ralph's maybe bimonthly to check out article content in the closest outlet.

A walk-in store is good to compare relative quality of front panel displays in incident sunlight conditions. The Burbank HRO hasn't covered more than 30% of its front window with posters, notices, etc., so there is plenty of northern sky light hitting all those backlit LCD screens on front panels. Found none of them to be what I would consider good enough for mobile installations in sunbelt daylight, but others might think differently. I prefer LEDs for mobile relative to the pale backlit LCD displays.

The Internet is now the place to really shop for hobby equipment... but the on-line currency translators do not yet handle "Call" as a numeric-value price. :-)

I'm sure that your fist is still clenched inside that jar so I'm curious what the snarly insults will be in the inevitable reply... :-)

>> from the Tech license brought about just 4% more growth in a decade.
>
>That's not a valid conclusion.

Why not? The growth in Decade 1 was 30% and the growth in Decade 2 was 34%.
The difference is 4%.

No licenses expired between 1989 and 1994, but by 1999 all of the
first-generation 10
year licenses had been renewed.

>What percentage of hams were nocode techs at
>the end of 2000? 20%?

Doesn't matter.

> Whatever it was means the coded part of the ham
>population
>fell off rather rapidly. -16%? Like I said, ham radio would be in decline if
>it were not for the adoption of the nocode tech license.

That's not a valid conclusion. You presume that none of the Techs would have
been licensed
if the code test had remained.
>
>> Is it not possible to use VHF/UHF for that purpose? I thought you and your
>> friends were all high-tech types. Does it really come down to HF
>ionospheric
>> propagation being your only option? Sure sounds like it.
>
>I don't do satellite stuff. Neither does he.

Only by choice.

And satellite stuff is not the only way to cover that path on VHF. Ever hear of
tropo
scatter? Put up nice big 2 meter arrays at each end and some decent power, plus
a
low noise front end and there's a good chance you can cover that path on CW.
And if
PACTOR II is as good as you claim, you can use it instead of CW.

Well, Val, let's see. I've spent one year on the team developing the ARRL ARECC course, have taken and received a certificate in all three courses, have served as instructor in at least two classes in each of the three Levels over the past year (in fact, have had just the last month or so off). I was Hunt County ARES EC for a year, until I had to give it up due to obligations I must fulfill at work. The last act I did in that capacity was spend a little more than $1500 of my own money to put together an all day ARES symposium in Hunt County. I have spent untold hours in storm spotting, was with MARS for about three years--one of which was as net control. I have been with NTS and served as net control there for about a year; have been with RACES and ARES organizations both in Kaufman and Hunt counties.

I've done it all by challenging the status quo but without your type of attitude, and never to the detriment of the ARRL--even though I have some serious differences with the ARRL. You seem to be beyond diplomacy and professionalism in your approach to criticism and I dare say that you are nothing, truly nothing, but an overaged agitator with a mission to become ever as arrogant and offensive and Larry Roll and Dick Carroll, to name a couple.

What else would you like to know, because there is more...

Well, mostly. We used to have a ragchew on 10M every night. After one local ham became an Extra, he spent many evenings getting on or near frequency and keying m-o-t-h-e-r-f-u...and you know the rest. Cliff, my husband, one night began sending the guy's callsign to him with a de and Cliff's callsign at the end. The guy never even recognized his own callsign.

Oh, how do we know it was him? Because he'd also "tune up" with aaauuuuuddddddiiioooo coming from his station. And, when we'd all start making comments on how he'd probably paid for his Extra class license, he'd get so pissed he'd start yelling at all of us...what an idiot.

Amateur Radio Newsline™ Report 1286 - April 5 2002

Amateur Radio Newsline report number 1286 with a release date of Friday, April 5th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Australian radio regulators say no to I-LINK and the NCVEC says its time to revamp Element 2. These stories are first on Amateur Radio Newsline report number 1286 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL: I-LINK NOT LEGAL IN AUSTRALIA

One of the very popular internet based linking protocols appears to be illegal to use in Australia. This as the Australian Communications Authority issues a finding against I-Link. Q-News Graham Kemp, VK4BB, has the background:

--
There are two competing systems being used in ham radio to link repeaters over the Internet. One is called I-LINK and the other is I-R-L-P.

I-R-L-P stands for the Internet Radio Linking Project. It was developed in Canada by Dave Cameron, VE7LTD. It's aim is to link ham radio systems separated by long distance over the Internet without the use of expensive eased lines or satellites. I-R-L-P uses Voice-Over-IP software to link radio sites around the world. But I-R-L-P uses its own custom interface board and software suite running on a Linux platform. And that's why many hams have opted for an alternative called I-LINK.

I-LINK does everything that I-R-L-P does in linking repeaters, but it does not require a computer running Linux or any proprietary hardware interface. The needed software is available to anyone. It runs on a P-C and anyone can have it in their computer. Even non-hams. And that is what seems to be bothering our regulatory body, the A-C-A. It says that the widespread and open availability of I-LINK could make it possible for non hams to get on the air.

Over the past few weeks, much comment has been made regarding the legality or otherwise of I-LINK here in Australia. To clarify the A-C-A position, let me quote in part from a letter by John Martin the Federal Technical Advisory Chairman.

"There should be no issue with I-LINK because the A-C-A has made it clear that it must be impossible for anyone to gain access to an amateur transmitter by any means other than on-air working one of the stations that is connected to the link. The only system which can comply with this is I-R-L-P."

This action by our A-C-A appears to not sitting well with I-LINK proponents in other nations. Some fear the decision here in V-K could bring similar action by other communications regulators in their parts of the world.

VK's National Society, the Wireless Institute of Australia's President Ernest Hocking VK1LK along with WIA/ACA Liaison team member Gilbert Hughes VK1GH met with the ACA Thursday 28 March to discuss the current situation.

--
Hocking: “In order to address this situation the ACA have agreed to develop an information paper in conjunction with the WIA ACA liaison team. This paper will aim to make clear the criteria under which Internet linking can take place. The paper will not endorse specific software or systems. Rather it will provide clear guidance on the conditions that need to be met for the operation of such linked systems to remain legal within the the Radio Communications Act.”
--

It was agreed that every effort would be made to develop the paperwithin a period of 4 - 6 weeks. WIA President VK1LK has called on the Ham population of VK to "ask for your patience over the next few weeks whilst this document is being developed".

From Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Articles describing I-LINK recently appeared in both CQ and QST Magazines. No matter. Basically the Australian Communications Authority has said IRLP is O-K but I-Link has to go. At least for now. (Q-News)

**

RADIO REGULATIONS: FCC PROPOSES TO STRENGTHEN RULES AGAINST REPETITIVE APPLICATIONS

The FCC has proposed changing its application rules for all wireless radio services--including the Amateur Radio Service--in an effort to expand the scope of its current ban on repetitious applications. Newsline’s Bruce Tennant, K6PZW, has more:

--
The ARRL Letter reports that an FCC Notice of Proposed Rule Making released March 20th seeks to modify section 1.937 of its rules. This, to prohibit the filing of all applications that are substantially similar to applications the agency denied or dismissed with prejudice within the previous 12 months.

The term “with prejudice” means a legal issue or court case that is dismissed for good reason and the plaintiff is barred from bringing another action on the same claim. And, if the FCC gets its way, WT Docket No. 02-87 will bring a rules change that might prohibit a handful of applications filed by new and renewing hams where a similar or identical application was denied in the past 12 months.

The FCC cites the pending license request by Herbert L. Schoenbohm, ex-KV4FZ, as an example of a repetitious application. Schoenbohm's amateur license renewal was finally denied in 2000, when the US Supreme Court refused to hear the case. His authority to operate as a radio amateur expired in January 2001.

Then, last April, Schoenbohm applied for a new Amateur Radio license and passed the General exam. The FCC has designated that application for hearing, to determine, in part, if Schoenbohm deserves to be a Commission licensee.

The FCC says that such cases consume significant resources to re-litigate. Especially since they involve identical issues and the same applicants very close in time.

What about routine issues like dismissed vanity applications? The FCC says that they would not be impacted in any way. For vanity license applications, the FCC now allows these applicants to correct the mistakes and file again. The FCC says that it will continue to do so if the proposed rule change is adopted.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW
--

Comments on WT Docket No. 02-87, are due 30 days from the publication of the proposed rule in the Federal Register. Reply comments will be due 45 days after publication. (ARRL)

HAM RADIO TESTING: NEW ELEMENT 2 DRAFT EXAMINATION RELEASED FOR COMMENT

The proposed draft syllabus for the new Element 2 Amateur Radio examination has been released for public comment. As we go to air, Scotty Neustadter, W4WW, who chairs the NCVEC Question Pool Committee says that this draft syllabus will be posted to the ARRL's web page within a few days.

Neustadter adds the period for public comment will close on May 9th. He asks that you send your comments to all the members of the Question Pool Committee of the NCVEC. Their e-mail addresses are:

Scotty Neustadter, Chair w4ww@arrl.net
Bart Jahnke, Member vec@arrl.org
Fred Maia, Member fmaia@texas.net
John Johnston, Member Johnston.John1@worldnet.att.net)
(NCVEC, W4WW)

HAMVENTION 2002 - THE CHAIRMAN SPEAKS OUT

The Dayton Hamvention is now just a bit more than a month away and its General Chairman, Jim Graver, KB8PSO, is speaking out. Actually he has been talking to RAIN Producer and 2002 Radio Amateur of the Year Hap Holly, KC9RP. One of the things he made public was who will be speaking at the Hamvention's grand awards banquet:

--
Graver: "It will be William Cross from the FCC and Paul Reid from FEMA, and they will be talking about emergency communications and preparedness in respect to Amateur Radio."
--

Want yo hear more? Well Holly has prepared an extended interviewww with Jim Graver. Part 1 is on line right now at www.rainreport.com. If you don't happen to have internet access, try calling 847-827-7246. (RAIN)

**

CONSUMER ALERT: TELEPHONE AREA CODE 809 IS COSTLY

If you get an e-mail, voicemail or page telling you to call a phone number with an 809 area code, beware. The CGC Communicator reports that chances are, it's a scam and your phone bill will be
astronomical. The FCC has already issued a public warning about calling this area code. Its on the web at www.fcc.gov/cib/consumerfacts/809.html (CGC Communicator, FCC)

**

COMMUNICATIONS BUSINESS: AOL REPORTEDLY COURTING LINUX

Linux users listen up. Your favorite operating system may finally be getting a shot at becoming a real competitor to Microsoft Windows as rumors surface that AOL Time Warner Inc. is negotiating to buy the Linux distributor Red Hat Inc.

The Washington Post reported in late January that such talks were underway. The deal could bolster AOL Time Warner against rival Microsoft as both companies design strategies for moving their services beyond the personal computer to mobile devices and such nascent services as interactive television. (Publised reports)

**

HAMFESTS: ST. JOHN LUTHERAN SCHOOL HAMFEST

Turning to the hamfest scene. The St. John Lutheran School Hamfest and Electronics Show is slated for Saturday, April 13th from 8 a.m. to 1 p.m. Location is in Garfield Heights Ohio. Garfield Heights is 10 minutes South East of Cleveland with the school at 11333 Granger Road. Admission is only one dollar. For more information please write by e-mail to ln4js@visn.net. (via E-Mail)

NAMES IN THE NEWS: KE4IQB NAME WITHDRAWN FOR DEPUTY NASA ADMINISTRATOR

NASA says the White House has withdrawn the nomination of Marine Corps Major General and former astronaut Charles F. Bolden, KE4IQB, to be the space agency's next Deputy Administrator. Bolden is currently Commanding General of the 3rd Marine Aircraft Wing, based in San Diego. According to the CQ website, the NASA announcement did not say why Bolden's nomination was withdrawn, but suggested that the Defense Department objected to losing him from an active military command during the war on terrorism. There was no immediate word on who would be named to the number two post at NASA instead of Bolden. (CQ)

**

NAMES IN THE NEWS: KB2GSD TO PITCH FOR FREE AIRTIME

Walter Cronkite, KB2GSD, will be the pitch man for a new campaign taking on broadcasters for not offering enough affordable or free airtime to federal candidates. This, even though the airwaves are owned by the American public.

The coalition sponsoring the Cronkite narrative said that its kicking off its grass-roots drive following passage of the landmark campaign finance reform legislation. This legislation spared broadcasters from having to offer deep discounts to federal candidates.

Under current federal law, broadcasters are required to give discounts to political candidates. However the actual rate can vary depending upon the time it is slated to air. (Publisged reports)

**

NAMES IN THE NEWS: W6TIA RETIRES FROM KFWB

Richard Rudman, W6TIA, the Chief Engineer of KFWB - AM in Los Angeles California is retiring following a truly illustrious thirty year career at the all-news station. Rudman, who is the National Chair of Congressional Emergency Alert System Advisory Committee is perhaps better known for his roles with the establishment and evolution of the E-A-S nationwide.

During Rudman's tenure heading up the engineering helm of KFWB, the region has been regularly challanged by major brush fires, power failures, earthquakes, riots, and more. Throughout all of this Rudman has kept KFWB on the air. A truly enviable record and one that W6TIA can be proud of.

And less we forget, W6TIA has agreeed to be a part of this years Newsline sponsored Ham Radio Town Meeting at the 2002 Dayton Hamvention. His topic will be the Emergency Alert System and introducing it to Amateur Radio. (CGC Communicator, ARNewsline(tm))

EMERGING TECHNOLOGY: SMART FENCES

Smart fences are possible. So say Pennsylvania State College researchers who are using acoustic technology to turn a simple chain-link fence into an intrusion detection system.

To make the system work, a single strand of galvanized steel wire, a system of springs and weights and some inexpensive ground sensors make the fence sensitive to intruders. Among parties interested in the technology are the U.S. military, airports and oil companies. (PSC News Release)

**

SPACE AND SCIENCE: REPLACEMENT TDRS IN TROUBLE

A NASA communications satellite launched into orbit on March 8th has developed a problem with its onboard supply of propellant. The trouble is delaying the Tracking and Data Relay Satellite-I from reaching its ultimate destination, a circular orbit about 22,300 miles above Earth's equator. The satellite's current egg-shaped orbit is 22,236 miles at its ap[ogee and about 4,970 miles at its perigee. The spacecraft's manufacturer, Boeing Satellite Systems, is hopeful that its engineers will ultimately be able to deliver the satellite into its proper orbit. If it can’t, the satellite could be declared a total loss. (Published news reports)

**

INTERNATIONAL - HOLLAND: NEW LATIN AMERICAN RADIO STATIONS CD

Dutch shortwave enthusiast Max van Arnhem has produced an audio Compact Disc featuring 371 wave files of Latin American and Caribbean radio stations. According to Media Network, most are off-air recordings as received in his home in The Netherlands, but there are also some recordings made on one of the five trips he made to Central America and the Caribbean between 1979 and 2001. You can find a review of the CD, and details of how to buy it at www.rnw.nl/realradio/booklist/html/lacd.html. (Media Network)

**

DX

In D-X, the Ducie Island DXpedition is being called a major success. The ifirst ever D-Xpedition to the newest DXCC entity came to an end March 26. The VP6DI team was on the air for just over nine days and loged over 39,000 contacts. VP6DI HF QSLs go via VE3HO, and 6-meter QSLs go to JA1BK.

And some good news for DXCC chasers. This as the ARRL announces that it will accept SSB contacts with P-5 slash 4L4FN in the Democratic Peoples Republic of Korea for DXCC credit. The operator of the station is Ed Giorgadze of the Republic of Georgia. He has been active from the capital city of Pyongyang since last November. Valid contacts from the beginning his P-5 operation last fall may be submitted for credit, effective immediately. (ARRL)

**

A NEWSLINE FOLLOW-UP: THE POLITICS OF 11 METERS - PART 2: “A NATIONAL RESOURCE CALLED REACT”

Last week we told you that there has only been one truly successful organization with any political ties to 11 meters. In Part 2 of his special report on the not so political side of 11 meter Class D CB, Amateur Radio Newsline’s David Black, KB4KCH, takes a look at REACT.

--

A long known name in CB radio is REACT, or Radio Emergency Associated Communications Teams. REACT's mission statement stresses public safety communications, assisting individuals, groups and government agencies.

The stated goal: To save lives, prevent injuries and give assistance wherever and whenever needed. The group promotes establishing a monitoring network of trained volunteer citizen-based communicators and using all means available to deliver their message. REACT, it seems, has succeeded on both counts.

The idea of using CB radio in an organized way for emergency communications was born in a mid-winter Chicago snowstorm. It happened after CB radio was used to summon assistance for a young family with a very sick child whose car was stuck on an expressway. That was in the winter of 1962 when CB was really still in its infancy.

Not long after, the groups founder, Henry B. "Pete" Kreer, convinced the Hallicrafters Company to sponsor the REACT program. The initial requirements for a Team was for three members who agreed to monitor 11 meters several hours a day for emergencies. There were no dues or other requirements except to comply with federal and state regulations.

By 1964, it was determined that there was a need for a National CB Emergency Channel. REACT National Headquarters asked all of its 800 teams to monitor channel 9 as a voluntary emergency channel. The scheme worked so well that in 1967, REACT led a movement to convince the FCC to designate channel 9 as the CB emergency channel. It was a major political success and many CB hobbyists began to look at REACT as a possible voice in Washington. But that was not to be.

In 1969, General Motors Research Labs assumed sponsorship of REACT. Also in 1969, Jerrold Reese -- a name that would become synonymous with the growth of REACT became its Managing Director. Founder Henry Kreer remained on with the title of Executive Director.

It was on April 24, 1973, that REACT and to a lesser degree 11 meter C-B probably got its greatest public exposure. That’s when NBC's Today Show televised an interview with Gerald Reese and Henry Kreer. Their interview dealing with the REACT program was aired on some 220 affiliated stations. It lead to over 500 inquiries.

In 1975, REACT broke from GM and started as an independent organization. Not long after, REACT International received not-for-profit status in the state of Illinois followed by federal tax exempt status.

REACT was on its own and less than a year later, it was represented at the first White House Conference on CB radio. And in the ensuing years it won many awards for promoting highway safety through its radio monitoring efforts.

But nothing last forever and the late 1970's brought declining use of 11 meter Class D CB. As the 80’a approached there were far more CB sets sitting on closet shelves than on the air. The C-B craze was dying and with it fewer people in the REACT program.

By the middle 1980’s REACT the only major organization with any ties at all to 11 meters. REACT had survived the CB shakeout probably because never claimed to be a savior or rallying point for 11 meter hobby operators. It’s self appointed task was assistance to the public. REACT was now national and chapterized and tax exempt. It also had broadened its horizons to include other bands and began using operators from other services including ham radio. C-B was now only a part of the REACT model.

In retrospect, one might say that REACT fought very hard for setting up an emergency communications monitoring system on 11 meters, but it was not a lobbiest for the rights of the 11 meter hobby radio operator. Instead, it always has lived to its mission statement and that’s probablly why it has survived and prospered for the last 40 years.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.

--

To learn more about REACT International or to find out if there is an active REACT team in your area, please write to REACT International, Inc. 5210 Auth Road, #403, Suitland, Maryland 20746. You can also go to their website at www.reactintl.org.

Meantine, one question remains: Will anyone ever be successful in totally organizing political potential of 11 meter C-B? That part of the story, next week. (ARNewsline(tm))

I'm not counting Tech+'s. And I am presuming that some of the Techs would
have been licensed if the code test had remained. If only half the Techs
would not have been licensed, then the ARS population would be in decline.

> And if PACTOR II is as good as you claim, you can use it instead of CW.

I'm already in email contact with him.

>2001.

I don't think this is correct. In February 2001 the rate at which
Techs were dropping out was zero. In March 2001 the rate at which
Techs were dropping out became non-zero. As the dropout rate for the
other license classes was unchanged between February and March 2001,
the dropout rate for the service as a whole, including Techs, must
have increased. That is, the dropout rate for the service as a whole
was abnormally low prior to March 2001, only since then has the dropout
rate become closer to "normal". In fact I think the number of dropouts
for Tech is now abnormally high, since the number of expiries for that
license are substantially higher over the 4 years following March 2001
then they are for the subsequent 4 years (i.e. a lot of people got the
Tech license when it was new).

>There was a lot of speculation about how many Techs would renew. I have always
>thought the percentage would be comparable to other license classes.

If I've done the calculations on the ah0a stats correctly (have awk
will travel), the percentages of hams failing to renew, including
adjustments for grace period renewals, averaged over the last year has been:

e=14% a=25% g=25% t=40% n=73%

If one also includes cancellations (I assume this is mostly SKs) one gets

e=37% a=30% g=35% t=43% n=73%

as a fraction of expiries+cancellations.

Every month the service now loses about 2450 licenses, sort of proportionately spread across all license classes. Before March 2001 the Tech fraction was much smaller (only Tech+ licenses expired) and the monthly loss was more like 1850. The growth (or lack-of-growth) rate for the service as a whole depends on how many new licensees there are to replace these.

>>> but if the higher speed code tests really were discouraging 600 new hams
>>> a month with this interest from entering the service, as apparently may
>>> have been the case, it was probably time for the code tests to go.
>
>They will be totally gone soon. FCC has all but set the date. 600 per month is
>only
>7200 per year - about 1%.

1% of the total amateur population, maybe, but it is 25% of the hams that disappear and more than 30% of the total new licenses. It is a significant fraction of all new hams. I can't help but think this is a good thing overall, though it remains to be seen whether the up-tick has staying power.

Having had some experience with the numbers, it is time to throw my oar in
the water.

First, cancellations are NOT SKs and in fact if I had the license and the death cert I am not sure I could cancel someone else's license at all. Several things cause cancellation, the biggest being the vanity callsign program; because the tickets are 10 years for the fee, the old one must be cancelled. While upgrades can be modifications, it may be necessary to cancel the old callsign to get the new one issued or it gets counted that way.

In any given month, four months of renewals are processed in bits and pieces or said another way, not even a good majority of April renewals will be April expirations. In fact, there will be a lot of July expires starting thru as they get past the 90 day bar. The only real way to tell is to follow a block of expirations over 4 months.

Your non-renewal figures are fairly close to what I got a few months back. But if one assumes that the reason for non-renewal among Extras is death, 14% implies six renewals or a sixty to seventy year Amateur career which is stretching a point just a bit. There is some demographic influence at work here. You might be amazed how many QCWA types are not Extras and a lot of them are renewing Class A's from WW2 but even at that there is nothing shabby about 25 percent because that implies a 35 year career AVERAGE.

Given upgrading which is typically done early, one would expect to see the non-renewals go up as privleges go down, and that is what you see simply because those who have upgraded are no longer Novices or Techs to be run thru the renewal process; they have self-selected.

Tracking these things has more hair than a barbershop floor.

W5TIT - Kim wrote a lot of GOOD stuff!

Well, now, THAT's DIFFERENT! Congratulations, and I'm
serious in this! I have only one question, and it has to do with
"attitude." How does your call sign fit in there? That is, if
a female amateur radio operator showed up at a junior high,
or even a middle school, around HERE, with that call . . . well,
I don't think it would be well in most cases. Just a thought.

The lords of amateur radio I guess eh? They can speak, doesn't mean I have to listen to them. Just like the old axiom goes, if you don't like what you hear on tv or radio (or ham radio) there are a couple of options:

Use the power switch, set to off position
Use the tuner dial, channel changer, remote or VFO to change the frequency
Use the volume control to turn it down.

Guess I look at it this way, as I remember it from when I was a kid. The louder someone yells, the less a person listens. Its all about how a person delivers the message.

Ryan

> and meaning of the word. But none of that matters. "AMATEUR" has to GO!

"Amateur" is an artifact of the early days of radio way back before the Funny Cookie Corporation was set up. Then the broadcasters who were the "professionals" got the ancestor of the FCC to ban the amateur broadcasters from playing music. Amateur radio evolved into the 2 way radio hobby/service we have today. You could mention "ham radio" but where the term "ham" cam from is not at all clear. But you have to distinguish it from CB, which some of the kids have seen and played with.

Maybe a demo of packet, but with 1200 baud speed, that's not going to compete well with 56K dialup connections on the 'net. Maybe play recordings of QSOs with the space shuttle crews (live would be too prone to failure). Or set up an HF station using a wire dipole strung between trees where everyone can see, and during a contest make some quick contacts to some easy DX. Or some prearranged rag chew to a common DX station (common in that other hams won't try to snag a quickie for a card). Idea is to promote that this radio hobby doesn't require any infrastructure like the internet does (like phone company undersea fibre optic cables, etc) beyond a radio and an antenna. And no phone bill or ISP monthly charges.

Be sure to stress that ham radio is 2 way, so no kids think that
it's a way to play rap or heavy metal to the town.

BTW, Why is it called "American Radio _Relay_ League"?
A relay is an electromechanical switch driven by a coil, yes?
And radios don't use relays anyway....

What you meant to say is "transmit". "Broadcast" means to
be on continuously transmitting music or such. Hams are not
to do that, we are to have "2 way" conversations when we
transmit. "How do you start such?" you ask. We have
special protocols for inviting any other ham to engage in a
conversation, such as saying "CQ" (CQ is shorthand for
"I would like to talk to anyone who hears my request").

Back in the old days, our callsigns were linked to radio
equipment set-ups. Nowdays, our callsigns are more
associated with the person, and they can use any ham
radio equipment set-up (i.e., if I visit a ham friend, and
he lets me use his station, I use my callsign, not his).

Hams have frequency coordination organizations
run by hams to "allocate" ham frequencies that
can be used for repeaters. You can't really have
two repeaters on the same frequency pair in the
same town or area. It would be like having two
TV stations on the same channel in the same town.

The FCC says that it will view the ham organization who
does the allocation as legal as if the FCC did it themselves.

Normally, hams can use any ham radio frequency that is not
being used by other hams at the time the ham wants to
transmit. Repeaters are a special case. We "self allocate"
when we decide to transmit, and when we finish our conversation,
return the allocation to the general pool for other hams to use.

But we must listen first to make sure we don't "step on" other
hams.

It was simply another lying typo on my part, Hans. The sentence should
have read "This comment, in particular, doesn't make much sense".

Time for some self-examination, Cecil. The reason I could think you
meant that is due to the way you presented the material.

How did you establish that the Church was thinking evil thoughts?
Perhaps you meant that the Church was lying because it stated its belief
in something which was later found to be in error.

Bob, if you think 'Amateur' is an artifact, grab hold and hang on. The
"relay" in ARRL is a leftover from the EARLY Low Frequency days before
ionospheric propagation was discovered, when the only way to get a
message beyond ground wave distance was to "relay" it through however
many other ham radio (spark) stations it took to reach its destination.
'American Radio Relay League' has been named that from near its
beginnings in 1914.....

Dick

> over-the-counter media glitz show just on the chance
> a handful of non-hams "might" gravitate to its cover. Far
> better for the personal outreach effort.

I think you are assuming that hams don't care to see an attractive layout. I want to see good layout and attractive content.

If you don't care for or appreciate attractive layout, that is okay, and you will be satisfied by anyhthing that is put out. This isn't to sound demeaning or anything, it just means that you aren't oriented that way. It can even be a plus,(the characteristic, not poor layout) as you won't be swayed by it.

But most people do react to proper design, even if unconsiously. That is why it is there.

And I really do agree with you that we don't want to turn QST into an "over-the-counter media glitz show". But you really took a suggestion for improvement and put it right on the slippery slope there. Those things are often not at all good design in the first place.

All that is needed is some good design. That doesn't take much doing. I am surprised that so many hams would be against this. In a hobby where so many try to be precise and accurate, they are satisfied with what amounts to a visual typo.

N2EY wrote:
> >What percentage of hams were nocode techs at
> >the end of 2000? 20%?
>
> Doesn't matter.

It seemed to matter when you posted the following:

> Total number of N/T+/G/A/E in June, 1997: 503,549
> Total number of N/T+/G/A/E on June 25, 2000: 470,240

> Total number of Techs in June, 1997: 174,924
> Total number of Techs on June 25, 2000: 208,330

You also said:

> From 1980 to 1990, the number of US hams rose 30%
> From 1990 to 2000, the number of US hams rose 34%

That means there were about 506,000 coded hams in 1990.
Your figures indicate about 470,000 coded hams in 2000.
That's about a 7% decline in coded hams. If the nocode
tech license had not come about, about 17% of the year
2000 nocode techs would have to have decided to become
coded to keep the ARS from suffering a decline in
population.

It's longer on voice, too. And less clear.

> But on voice, "Name here is ...", is so pedestrian.

What do you have against walking? It's healthy exercise.

> What's wrong
> with a little flair using ham lingo?
>
What's wrong with plain English that is clear to everyone instead of
jargon
that is less clear and takes longer?

> > >What's wrong with it now?
> >

>
> Who give a rat's patootie about CB?

Not me. I've never been a cb'er, never had a cb set or used one. I
have listened
to them a few times over the years on a general-coverage receiver.
Most of what
I heard were not things I would want to hear on the ham bands.

> The meaning has not changed within
> ham radio?

Sure it has.

> Most of us OF's still say, "Handle here is ...".

That's you, not me. What do you have against change? Us newer ops say
"name"
so that everyone understands.
>
> > The meaning of "handle" in connection with voice radio was changed from "name"
> > to "alias to disguise true identity".
>

> Are you going to allow CBers to dictate what happens within ham radio?

Not if I can help it.

> My handle is Cecil and has been since 1951.

You were born in 1951?

The primary meaning of some words changes over time. Consider what the word "gay" meant in 1951, and what it means now.

> And that's just one reason....

And a very important one, IMHO, that seems to be consistently overlooked in these discussions. It may be because it leads to drawing a parallel between amateur radio (legalized "free-banding") and other "legalized" vices (gambling, prostitution, drugs). The approach seems to be the same -- put it out in the wilderness (Nevada, below 200 meters) or on a reservation (ham bands, Indian lands) and regulate the hell out of it. But make the legalized product or service still attractive enough so that illegal varieties can't compete in cost and convenience.

I believe that was the thinking back after the close of WWI when the US Navy wanted to maintain an iron-fisted control of the airwaves but the government moved to civilian regulation and formed the ARS. The realization was then that all those old pre-war spark-gap rigs were still out there and ready to be fired up again once the war fever had subsided. Better to give the hams their own, supposedly useless, wavelength sandbox to pee in.

That is still true today. I think the most valuable service the ARS renders to the worldwide wireless communications environment is that of diverting the

the ratchet-jawed communicators and garage experimenters into narrow, regulated slices of rf spectrum. If the ARS didn't exist as a relatively accessible medium, every land-mobile, aircraft, marine, and military radio set would have be treated as a "controlled substance" whose possession without official authorization would be a crime.

So I believe it is very much a necessity to make the ARS as accessible as possible to as many people as possible. I am not so sure that having an operator's license for the service is a good thing. Station licenses, yes, but nothing that requires a test. I think proof of financial responsibility would be an adequate qualification -- the reasoning being that any violations and subsequent NAL's would be easy to prosecute. For those less-well-off, an operator's test might be an alternative to posting a bond as a way of ensuring compliance with rules and regulations.

I make that suggestion with no small amount of trepidation. In my own, admittedly limited, contacts with freebanders and outlaw CB types, I am struck by the fact that, not only in the code test seen as a barrier, but the theory part is perceived as equally daunting. My impression is that these people know precious little about how or why radio equipment works. And seemly don't want to learn in any organized, effective way. This presents a very significant problem in terms of keeping them "on the reservation" so to speak (ie: inside allocations). So I am willing to concede there are indeed limits to licensing relaxation. But the direction still should be toward greater, and easier, availability.

Just a quick note:

> First, cancellations are NOT SKs and in fact if I had the license and the
> death cert I am not sure I could cancel someone else's license at all.

A close family member can get an SK's license cancelled so that the
call can
be reassigned. I know locals who have done this, and it may be one of
the most
common reasons licenses are cancelled.

> Several things cause cancellation, the biggest being the vanity callsign
> program; because the tickets are 10 years for the fee, the old one must be
> cancelled. While upgrades can be modifications, it may be necessary to
> cancel the old callsign to get the new one issued or it gets counted that
> way.

Is this known for sure?
>
> In any given month, four months of renewals are processed in bits and
> pieces or said another way, not even a good majority of April renewals
> will be April expirations. In fact, there will be a lot of July expires
> starting thru as they get past the 90 day bar. The only real way to tell
> is to follow a block of expirations over 4 months.

Or even longer. Add to this the fact that many renewals wind up in the
grace period for reasons such as mailroom delays, "whoopsies" and
"what form do I use" situations. A license issued as long ago as May
1990 is still renewable.

The renewal "window" is very short, and easy to miss. FCC's reasoning
on
renewal has changed many times over the years. I can recall getting
renewals
with each upgrade and address change. The idea seemed to be that if
FCC had
to print and mail a license they might as well renew it and possibly
save a
bit of work down the road. Today the opposite is true, possibly
because they
don't want the database any more full of SKs than it has to be. The

only auto-renew is of course a vanity call, and that's done to avoid prorating the fee.

There is also the "resurrection" factor. There may be a sizable block of hams
out there who have all but lost interest, and even let their licenses lapse.
But upon hearing about the restructuring, they renew and then upgrade because
it's so much easier now.

Robert Casey <wa2ise@ix.netcom.com> wrote in message
news:<3CB13AEB.5F8E36B2@ix.netcom.com>...

> "Amateur" is an artifact of the early days of radio way back before the Funny
> Cookie Corporation was set up. Then the broadcasters who were the
> "professionals" got the ancestor of the FCC to ban the amateur broadcasters
> from playing music.

There's a bit of truth there, but "amateur radio" precedes
broadcasting.

There were noncommercial private stations on the air from the very
beginning
of radio. The term "amateur" evolved to describe stations and
operators who
did radio for its own sake.

1912 saw new laws governing radio enacted in the wake of the Titanic
disaster.
Amateurs were restricted to the wavelengths of 200 meters and "down"
(meaning
shorter, or higher in frequency). Formal licenses became mandatory at
that time.

> Amateur radio evolved into the 2 way radio hobby/service
> we have today.

That evolution was complete by 1925 or so.

Soon after the end of WW1, the idea of radio broadcasting began to
catch on. At that time there were no limitations on amateurs'
broadcasting music or one-way
transmissions, as long as it was done on amateur frequencies. The AM
broadcast band was actually carved out between the amateur's
allocations and those used for ships. (Note that "200 meters" is 1500
kHz, well inside the AM BC band).

In the very early 1920s there were some efforts to get away from the
"amateur" label, but the name was already "stuck".

> You could mention "ham radio" but where the term "ham"
> cam from is not at all clear.

"Ham" used to mean anything done in a haphazard way. It was a
derogatory term.
Radio amateurs turned it into a badge of honor. Word meanings evolve
over time.

> But you have to distinguish it from CB,
> which some of the kids have seen and played with.

Yup. Much of the population does not know the difference, which is a big
publicity/image problem for the ARS.

> BTW, Why is it called "American Radio _Relay_ League"?
> A relay is an electromechanical switch driven by a coil, yes?

That's one reason.

The organization was set up in 1914 because the amateur stations of that time
had limited range. Well-equipped 200 meter spark stations with the best equipment could do 1000 to 1500 miles when conditions were favorable. "Relay"
refers to the relaying of messages from station to station in order to improve coverage. The ARRL was set up to encourage and standardize message relaying, and to encourage technical and operating improvement through publication of periodicals and books.

Of course the ARRL evolved into much more over time, but again the original name "stuck".

> And radios don't use relays anyway....

All of mine do. My newest rig has the most - at least 17 of them! (most modern ham transceivers use them for bandswitching and other purposes).

That little bit of Ham Metaphysics is basically why I gave up reading tea leaves. There was a Tech from 1976 who had dutifully renewed since show up on another group wanting to know how to be a General. How does one determine death?? So what falls under Resurrection and what under ReKindling? Intent I guess.

There is a ham very familiar to people of our vintage, Leo Myerson W�GFQ, originally W9GFQ that has dutifully renewed a Class A under its various permutations for well over 60 years. He ran World Radio Labs home of the infamous Globe Scout, Globe King etc.

For that matter my dad K�CHK hasn't been on the air since he had all amateur privleges but renews like a clock. I get him near CW now and again but usually get a blast of 'Goddam Computer CW'. FWIW he also favors dropping the code test for exactly the reasons we have mentioned, it destroys the ability to do it right.

You can count licenses till Argentina becomes a creditor nation and all you really have is a count of licenses.

The right way to do it is to track August expirations thru their path to oblivion, Sept, etc. You will never get them to balance exactly and will tear your hair trying. This is, BTW, a common problem in insurance reserving. On Private Passenger Auto you will maintain development triangles based on accident month, report month, policy issue month, and the sales guys will storm in and show you the accounting calendar month proving all their new biz is so good you should reduce rates. You, of course, knowing that this will develop for years had been writing a report

recommending the drawing and quartering of your sales and underwriting staff for putting that crap on the books. And you thought the Ins biz was uneventful.

In 1951, my elmer told me that the word "ham" as applied to
amateur radio operators came from the way the Cockney English
hams pronounced h'amature.

> In another thread, Leonard H. Anderson, allegedly once a "professional"
>in
>the radio electronics field, made the following really stupid assertion:

Given several days to correct his erroneous statement vis-a-vis the
"strictly recreational" status of certain radio services, Lennie instead makes
the following (poor) attempts to hide his foolishness.

Thanks again, Lennie, for proving the "superior intellect" is anything
but....

Steve

QUOTE:

This sort of comment does no good, Cecil. The poor guy has
this terrible hang-up and can't let go of it. It's the classic
equivalent of the monkey with his hand inside a container who
can't unclench his fist long enough to withdraw the hand.

UNQUOTE

QUOTE

Can't be. Monkey boy never lies. He tells others they lie!

(Note: Lennie has yet to be able to disprove anything I have
stated...however the comments he made that instigated this thread prove HIM
wrong...again)

UNQUOTE

QUOTE

It's a common practice in here for frustrated egoists to start
in with personal insults whenever they've been bested in any
messaging. Attempting to use "b*stard" or "bastard" in any
form is a personal insult to myself and to both of my late
parents. There's no cause for such things and certainly not
condoned in The Amateur's Code.

(Note: Yeah..let's skip the "bastard"...Even Lennie's folks must have
known what a pr*ck he was going to be...No use blaming them)

UNQUOTE

QUOTE

Not really. I've encountered monkeys with clenched fists in
containers all my life. Most of the time I, like most others,
will simply ignore such types. Not worth the time to bother.

(Note: I am sure Lennie's fist has been found clenched in tight places
before...I just wonder how he got his arm bent around back there...?!?!)

Since you are so into personal things, why don't you write
some more about your in-country days when you saved a
whole brigade with your trusty radio as sole support?
I just love those old war stories.

UNQUOTE

QUOTE

Petulance is not a virtue.

UNQUOTE

Lotsa hot wind...No facts...No answers.

>
> Convienient? Why? There's precious little in there that you can use,
>Lennie. Legally, anyway.

Convenient: One can pull out of the Ralph's and Sav-On combined parking lot onto Victory Boulevard going northeast, cross the Buena Vista intersection and immediately turn into the mini-mall (8 shops) parking lot on the corner. HRO's branch is at the western end of the Ell-shaped building structure, Baskin-Robbins at the opposite end. There's a Radio Shack store in the middle. It is convenient to pull out of the lot going northwest on Buena Vista on the way home. Baskin-Robbins is an ice cream specialty chain store. There's also the "Holly-Woof" dog care salon in the middle but we don't go there that with three cats in the house. :-)

Legal use: Quite a bit of HRO resold products are quite legal to use without a license...antennas of all kinds from simple wire kits to mobile antennas to (special order) $16K towers...scanners of both portable and base station use...tools and tool parts specifically for electronics that might not be available at Radio Shack, Electronic City, or Fry's Electronics in Burbank. They carry SWL receivers but my Icom IC-R70 works fine still (bought at the old store location in Van Nuys before the move to Burbank). Their Grundig and Sangean digital portable "SWL" radios face competition from slightly-lower prices off-the-shelf at Fry's.

It's not "illegal" to buy publications without a license at HRO. They have many in stock. Personally, I'd rather buy ARRL books there than have to order from Newington AND pay shipping which comes to more than the 8.25% California sales tax. There's many different publishers of radio-interest books on the market and HRO doesn't discriminate or demand a copy of a Form 605 to prove to them a buyer is "worth it."

A number of years ago, a whole group of us went to the old HRO Van Nuys store to buy a new radio setup for a mutual friend's birthday. We all chipped in for the cost and two-thirds of us had no amateur license. The friend's wife wasn't licensed either. HRO

didn't mind...and the sales group thought it a fun thing and
approved all around. A great surprise birthday party that started
off a four-day holiday!

>>Found none of them to be what I

>>daylight, but others might think differently.
>
> For what purpose would you purchase an Amateur Radio transceiver anyway?

My purpose a few days ago was to get a group comparison of
front panel displays, mostly variously backlit LCD screens, with
strong incidental daylight illumination. That did not involve
INTENT TO PURCHASE!!! as you seem to imply.

Hello? Is your fist hurting so much in that jar that you can't
understand what I said before?

HRO carries the SGC line of HF SSB transceivers which has
become popular with sailboat owners. Different license
requirements than amateur, essentially a rubber-stamp process.
Nearly 3/4ths of SGC sales are to foreign markets, not bad for an
outfit that makes things in Bellevue, WA, USA.

>>I'm sure that your fist is still clenched inside that jar so I'm curious
>>what the snarly insults will be in the inevitable reply.
>
> I am sure you think it is, Lennie, but it's not.

Of course it is. You can't help yourself. It's your obsession.

You MUST do a break-in to every exchange with another. It's a form
of JAMMING and you feel righteous about employing such tactics.

You aren't accomplishing anything other than being obnoxious.

In article <3CB13AEB.5F8E36B2@ix.netcom.com>, Robert Casey
<wa2ise@ix.netcom.com> writes:

>BTW, Why is it called "American Radio _Relay_ League"?
>A relay is an electromechanical switch driven by a coil, yes?
>And radios don't use relays anyway....

The word "relay" as used in messaging originally meant a
transfer of a message from one courier to another on its way
to a destination or, as in the British and French semaphore
systems, the sending of a message from station to station.

The 1840 Patent of Morse and Vail described a telegraphic
relay apparatus which utilized an unattended solenoidal coil
operated key switch to repeat the original key-down, key-up
from the manual telegrapher. This overcame the inherent
limitations of wire resistance, battery voltage, battery losses,
etc. so that a telegraph circuit could extend farther than the
first 10 to 20 mile distance limitations. In the technology of
that century, up to four relay appartuses could be installed
to make a 100 mile telegraph circuit complete. For the
middle of the 1800s this was a remarkable and innovative
jump in communications technology.

Manual telegraphy was already known and understood, could
not in itself be patented. The solenoid-key relay was a new
thing, people in electrical technology noticed the application
and found other uses for it. Thus was born the word "relay" as
applying to the coil-isolated-and-insulated-switch electro-
mechanical structure that has been common in electricity-
electronics for over a century.

According to both official and unofficial sources, the American
Radio Relay League was born from a desire of a trio of New
Englanders in Connecticutt to be a very low-cost substitute for
telegramming others, ostensibly about radio parts and
availability. Neither telephones nor commercial telegraphy was
cheap in 1914. A local club near Hartford became a sort of
communications "hackers" group. :-)

The "relay" in ARRL refers to message relaying, the starting
purpose of a small local club. It was not the first such
organization. The Radio Club of American had already been in
existance for 5 years and several other "amateur" clubs had
sprung up throughout the USA in those 5 years. Competition
would naturally occur among clubs, most staying local, some

quit trying to become national. The ARRL survived and, being also a huge publishing group for amateur radio interests, has naturally published selective history to prove its inherent goodness. Early radio history does not always look with favor upon the early ARRL.

The RCA survives also and rightfully holds onto the claim of being the very first such radio organization in the world.

The electromechanical switch or "relay" owes its common word to the original Morse-Vail patent.

No. I didn't. I said broadcasting because I meant broadcasting. Now, you may think that the original query poster may have meant transmitting, but then gave examples with COMMERCIAL callsigns, so it was clear that he meant broadcasting.

Not only odd but anti-human. The swear words don't come from the same part of the brain as all the other Morse code words. People with a certain kind of brain damage have proved that to be a fact. It would take a mutant to swear using CW and include the swearing emotions. When I get angry enough to swear I can neither type nor send Morse code. Swearing is a verbal act akin to the chest beating of our closest animal kin.

940. Insurance claim

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-08 21:24:01 UTC
From: K0HB <KAYZEROHOTELBRAVO@ELECTRICSMOKE.NET>
Message-ID: <RTns8.1100$3P4.80297@newsread2.prod.itd.earthlink.net>
Source record: 40205

An incredibly unlucky man was in a strange accident, and was trying to collect
insurance money for his suffering. After reviewing the claim the insurance
company contacted him and asked for more information. This was his response:

"I am writing in response to your request for additional information for block
number 3 of the accident reporting form. I put 'poor planning' as the cause of
my accident. You said in your letter that I should explain more fully and I
trust the following detail will be sufficient.

I am an amateur radio operator and on the day of the accident, I was working
alone on the top section of my new 80 foot tower. When I had completed my work,
I discovered that I had, over the course of several trips up the tower, brought
up about 300 pounds of tools and spare hardware.

Rather than carry the now unneeded tools and material down by hand, I decided to
lower the items down in a small barrel by using a pulley, which was fortunately
attached to the gin pole at the top of the tower. Securing the rope at ground
level, I went to the top of the tower and loaded the tools and material into the
barrel. Then I went back to the ground and untied the rope, holding it tightly
to ensure a slow descent of the 300 pounds of tools. You will note in block
number 11 of the accident reporting form that I weigh only 155 pounds.

Due to my surprise of being jerked off the ground so suddenly, I lost my
presence of mind and forgot to let go of the rope. Needless to say, I proceeded
at a rather rapid rate of speed up the side of the tower. In the vicinity of the
40 foot level, I met the barrel coming down. This explains my fractured skull
and broken collarbone.

Slowed only slightly, I continued my rapid ascent, not stopping until the
fingers of my right hand were two knuckles deep into the pulley. "Fortunately,
by this time, I had regained my presence of mind and was able to hold onto the

rope in spite of my pain. At approximately the same time, however, the barrel of
tools hit the ground and the bottom fell out of the barrel. Devoid the weight of
the tools, the barrel now weighed approximately 20 pounds. I refer you again to
my weight in block number 11.

As you might imagine, I began a rapid descent down the side of the tower. In the
vicinity of the 40 foot level, I met the barrel coming up. This accounts for the
two fractured ankles, and the lacerations of my legs and lower body. The
encounter with the barrel slowed me enough to lessen my injuries when I fell onto
the pile of tools and, fortunately, only three vertebrae were cracked. I am
sorry to report, however, that as I lay there on the tools, in pain, unable to
stand and watching the empty barrel 80 feet above me, I again lost my presence
of mind. I let go of the rope..."

My point exactly.

> It
> may be because it leads to drawing a parallel between
> amateur radio (legalized "free-banding") and other
> "legalized" vices (gambling, prostitution, drugs).

I don't see how that parallel can be drawn. The reason for all the
fuss about gambling, etc., is that those activities are thought to
be very harmful. The same cannot be said for radio operating.

I would say that the whole freeband issue is overlooked here because
it's
not a pleasant one to contemplate. The nocodetest folks certainly
won't
like the idea that perhaps the reason the FCC agrees with their
arguments
is to license freebanders. And the procodetest folks aren't gonna be
happy

to realize that maybe claims like "drop the code test and the pirates
will
all show up on the ham bands with licenses" may have given the FCC the
idea
in the first place, and/or reinforced it for them.

Scary, huh?

> The approach seems to be the same -- put it out

> own, supposedly useless, wavelength sandbox to pee in.

Actually, the history is somewhat different. Hams were legally
authorized and limited to "200 meters and down" and a kilowatt
input way back in 1912. The Navy had control of licensing
in large part because the first major non-experimental/amateur use
of radio was to communicate with ships at sea. There were some strong
anti-amateur individuals in the Navy department at the time, too.

There were only about 4000 amateur stations on the air in the USA at
the shutdown in 1917, and many of their operators never came back from
the
war, or lost interest during the duration. Keeping a lid on a few
thousand hams would not be that difficult, had it gone that way. The
Navy had kept amateurs off the air through the war and for months
afterward, and could continue to do so indefinitely if allowed.

It should be noted that the WW1 ban included receiving, and that
antennas had to be lowered to the ground and apparatus disconnected
and sealed by the RI.

Technically, what was signed on 11/11/18 was an armistice
(cease-fire), not
a surrender or a treaty, so the Navy argued that we were still
technically
at war and no reactivation was possible.

What broke the logjam was the efforts of Maxim, Stewart and others,
backed by the remnants of the pre-war ARRL, who went to Washington and

argued on behalf of amateur radio. First the receiving ban was lifted, then the transmitting ban. New licenses were available, but the tests were tougher.

And the ARRL had to fight all through the 1920s and into the 1930s on both the national and international fronts in order for amateurs to stay on the air.
That fight continues today.

Actually the original poster (me) didn't know what he meant because he's not a HAM, and thus posted conflicting, uneducated information. You are actually both correct though because in this instance because I was referring to a non commercial HAI licensed individual that should only be transmitting, but seems to be broadcasting. (example call signs were just in alphabetical order and were only examples). Thanks for all the information though, as it was a big help.

Interesting - Cecil CAN look things up.

> That means there were about 506,000 coded hams in 1990.

How do you figure that?

> Your figures indicate about 470,000 coded hams in 2000.

470,240 non-Techs in midyear.

> That's about a 7% decline in coded hams.

That is only true provided that ALL Technicians on that date are
assumed to be non-codetested. In fact that is not the case. As of the
end of June 2000, the FCC had been renewing Tech Pluses as Techs for
2-1/2 months.
There were also an unknown number of hams who held Tech Pluses but
whose licenses read "Technician" because the FCC took some time after
February 1991
to add the Tech Plus license class.

I know some Techs who were licensed in the late 1950s whose renewal
dates were in the early 1990s. Upon renewing, their licenses said
"Technician", even though
they were code-tested.

And of course any Tech who passed Element 1, or who upgraded from
Novice after
April 15, 2000, has a Technician license but is code-tested.

> If the nocode
> tech license had not come about, about 17% of the year
> 2000 nocode techs would have to have decided to become
> coded to keep the ARS from suffering a decline in
> population.

That's one in six over a nine year period.

Seems like you've disproved your own claim that the Tech kept ham
radio afloat, Cecil.

I have no reason to doubt the article which states: "Portions
of this book have been available on the internet, but the printed
version goes further, including input from many expert CW operators
from all over the world." In other words, the download version is
NOT same as the book.

Females may have better control over their emotions than males. I certainly
couldn't do that if I really meant it. If I get so angry at someone that I
could bring myself to send such, my hand would be shaking so badly that I
couldn't possibly send it. It takes control to send such. Most people who
say such are out of control.

>
>In 1951, my elmer told me that the word "ham" as applied to
>amateur radio operators came from the way the Cockney English
>hams pronounced h'amature.

Etymology in this case is going to be over-written by the
zealots. I have no doubt that professional telegraphers of a
bygone era would call beginner telegraphers "amateur" as
part of their showing-off. :-)

The extension to early-radio non-professional radio
hobbyists' label of "h'amateur" no doubt came from the
same path since on-off telegraphy was the only means
of communication in early radio. With the high comm
rates of early radio the foreshortening of "amateur" to
h-a-m ties in with "ham-fisted" (from another meaning but
also applied to manual telegraphy). Putting the didididit
before the didah "softens up" the word for telegraphy.

There's also a tie-in to food. Pork meat or ham had
traditionally been cheaper than beef. With the old fear
of trichinosis, pork/ham became less desireable, therefore
lower in cost. It was also cheaper to raise pigs than steer
(equated on pounds meat of carcass versus cost/effort to
raise to slaughter time). Ham (as meat) became "less
professional" than beef at the turn of the last century.

It's quite apparent that many radio amateurs resent the
term "amateur" because of the implication of "lesser
quality" in not being professional. They invariably use "ham"
as a self-descriptor and then rationalize the heck out of it.
:-)

In radio regulations there must be a distinction between
commercial/professional radio and other types/kinds of
radio activity. Back in times when ALL RF emitters had
to be licensed, "amateur" was a shorter form than "non-

pecuniary for personal use." The latter, of course, defines a hobby. An activity of a personal nature not having money-earning ability MUST be a hobby. It can't be anything else. :-)

The question is, at what cost? Ed Hare aptly
noted that if the cost could be justified, it'd be
spent. Basic business case modeling as I see it.

> If you don't care for or appreciate attractive layout, that is okay,
> and you will be satisfied by anyhthing that is put out. This isn't to
> sound demeaning or anything, it just means that you aren't oriented that
> way. It can even be a plus,(the characteristic, not poor layout) as you

Agreed. I just don't see QST as having to meet some
level of art/design that I might otherwise expect from a
different type of publication. In fact, I only keep QST
for about a year and then pass them on.

> But most people do react to proper design, even if unconsiously. That
> is why it is there.

OK, but if I'm already a ham and ARRL member, what does it
buy? What's the business case offset that justifies the costs?

> And I really do agree with you that we don't want to turn QST into an
> "over-the-counter media glitz show". But you really took a suggestion
> for improvement and put it right on the slippery slope there. Those
> things are often not at all good design in the first place.

I can accept the suggestion for improvement...BUT, I think
the full analysis needs to be done. The business case again.

> All that is needed is some good design.
> That doesn't take much doing. I
> am surprised that so many hams would be against this.

The business case again. I'll take a well documented tech report
over design anytime.

> In a hobby where
> so many try to be precise and accurate, they are satisfied with what
> amounts to a visual typo.

I thought the issue was design, not accuracy?

In all my dealings since I've had my callsign as W5TIT, I have talked to kids, I have talked to business meetings, I have done nets on the air, I have talked to visitors on our repeater (when I was much more active), I have been on HF (all bands) at different times and have never, ever had a problem with my callsign--except for some in this newsgroup and I'm certain their problem is more because I am a woman who thinks for myself and doesn't "give in." I brush the reaction in this newsgroup off--and would even brush off any kind of reaction from people who don't like it. I didn't get it for them...I got it to have fun, and because its a pretty obvious part of my vanity (which was what I goaded the guys about when they were all getting their initials--how boring).

At any rate, the callsign has never been issue. There have been those who "get it" right away and those who never do--and either way is fine for me. Works great in an HF pileup or for contesting. I guarantee you that if my callsign is heard in any way, net controls and contest stations will literally "part the waters" and ask everyone to stand by while they acknowledge the W5T "and I'm not sure I heard the rest right."

It's loads of fun and proves that ham radio can both be a serious as it needs to, and as funny as any other environment.

Riley wouldn't have a problem at all with me having been on all the bands,
Hans. Noen at all.

Whoops, I pushed send too quickly. Actually, my bird did. Anyway, the reason Riley would not have a problem with me working on all bands is I've done all bands in the presence of control ops, lots of times. I also have a General class licensee as a hubby, and have used his privileges several times while he sits on the internet.

Agreed. I heard the "Big Project" mentioned in an ARRL forum at the
Shriner's Hamfest in Columbus last year. I think the ARRL did solicit input
from the ham population, but perhaps there were fewer takers with the

required "vision." I think your mixing amateur radio with astronomy is a superb idea. It ought to be pretty easy to set up a special event station at one of your sky parties for starters. And the idea of using your telescope tracking mech to track an amateur satellite or the ISS while making a contact is really noteworthy. Hurry up and do it before someone else does.

I'll admit that the word "amateur" really doesn't do it. But then I read an editorial by one of the staff at 73 magazine several years ago. It was pro-amateur. There is nothing "amateurish" about some of the accomplishments of amateurs.

I had an early CoCo and upped it to 64K. I also got a real disk drive and
chunked the cassette. I had to cut slots and holes in the disks to use both
sides. Then my buddy showed me a real 'puter, the 1st PC, jr. That was
about 85 I think. The Vic20 was concurrent with the CoCo.

I bought a IC-02AT when that was a big deal. Now I'm using RS dinosaurs
HTX202 and 404's. The hardest radio that I've come across was the IC-281, a
hybrid 2m radio with 440 receive. Not intuitive like the great IC28H's.

I think the ARRL was instrumental in getting the rule changed so that a ham
Teacher could be on the clock while using ham radio in the classroom. But

wouldn't it be better if a ham club could take a program off the shelf and bring it to a school and sell it rather than a ham teacher having to develop something new? That would be ideal for the ARRL to get behind. I also think that every school library ought to have at least a set of SW and Scanner radios and headphones so that a kid could come in and spend 20 minutes tuning around and discovering that there is a bigger world out there than the Cartoon Network and Fox. The Spanish teacher could assign a few minutes of listening to a Spanish SW broadcast or listening to La Lambada music. Local clubs could rebroadcast shuttle audio to be tuned in on any scanner.

A special event HF station on the side of a sky party will generate
interest. Tune in Jupiters noise on 15M. Don't sell anything. The only
selling involved is with the school administrators to let you introduce a
radio program into the curriculum.

It certainly is. The nocode tech class of license went from 0% of the
ARS in 1990 to 30% of the ARS in 2000 and all you give them credit
for is a 4% increase?

Your treatment of the nocode techs reminds me of the treatment of
black athletes in the 1960's.

Two examples of what I would consider to be highly illegal transmissions, yet done every single day here in the Dallas area on 146.880:

One: For anyone who's listening, there's a big pileup on XXXX (where X=highway of choice), so don't go that way. A better way might be for you to take XXXX and get around this stuff because it's pretty bad.

What's wrong with the above? The person has keyed up and made a broadcast, addressing his/her comments to no one in particular. Now, I've even seen it happen that the person making the broadcast then ends their transmission without even IDing...although that doesn't happen often.

Two: There are two or more people who work at the same place. These people check with each other often about traffic flow and route. Truckdrivers will also come on frequency and ask how to get somewhere. Sorry folks, but both examples here are those that involve communication with pecuniary interest: namely employment.

There's pretty much only two repeaters I really ever listen to with any regularity. One is the most popular repeater in Dallas, the 146.880 machine. The other is my haunt, the 145.190 machine. At dinners and other get-togethers, we on the 145.190 machine have pretty much agreed we will not discuss traffic on our repeater. We also chide people who come on and do so...it's not good hamming at all.

Carl:

Like it or not, the NTI -- if and when formed, would/will always be
seen as a logical extension of NCI, whether or not that is actually
true. IMHO, the NCI had a great deal to do with bringing the ARS
to the precipice of the slippery slope -- and giving a good, firm push.

Hansl:

This is supposed to come as some sort of surprise? The NCTA
(soon to be simply the NTA) was heading in precisely this direction
all along. The whole point is to have a microphone, a "legal" high-
power amplifier, a VFO knob and a bandswitch in hand, without the
bother of having to actually learn any useful communications skills.
We started down the slippery slope with the No-Code Tech in '91 --
and we are picking up more speed as we get closer to the bottom.
All I can say is -- fasten your seat belts!

Kim:

I "use" my college degree each and every day of my life. The things I
learned, and the experience I had while learning them, have changed
me in ways that have improved my life considerably. Moreover, while
I am not presently employed in an occupation where I can "use" all of
the technical knowledge I gained from my major course of study, I have
learned to appreciate a job that I love to do and do well. The fact that
it pays well and has great benefits is the icing on the cake. All of the
"entry level" HR positions I applied for paid 5 - 10 kilobucks a year
less than what I'm making now. If I do take a different job in my
present company or elsewhere in the transportation industry, it will
most likely be as a Street Supervisor, Training and Development, or
Safety. So go ahead and keep ragging on how I'm not "using" my
degree. It just shows that, as usual, you don't know what you're
talking about.

>never (where never=proportionate amount of total time) use.

Kim:

I spent three years working full time, 7 days a week, without vacations, and going to school 3 or 4 nights a week in order to get my Bachelor's Degree. I did it for only one reason: Because I wanted to have one. Whether or not I ever "use" it, in the sense of actually making my living working as a Human Resources Manager, was not the point. In earning that degree, I learned a lot of things that would be of great help to me in any field of endeavor -- not the least among them was exercising the intellectual discipline required to not only earn that degree, but to receive it with the highest academic honors.

When I was in the Air Force, I worked with a lot of officers who differed from me in only one way -- they were college graduates. A great deal of them had degrees in what would seem completely useless fields of study -- Art History, Physical Education, "Women's Studies," etc. However, they all proved their ability to succeed in an academic environment, and the majority of them became technically and managerially competent officers -- deserving of a leadership position. They invariably recognized me for my intelligence and always encouraged me to further my own education, which I did to the greatest extent possible during my years in the service. As a result, I was always promoted way ahead of my peers, and even though I wasn't qualified to be an officer, I was always given positions of supervisory and managerial responsibility. The people I had the most difficulty relating to in the military were fellow Non-Commissioned Officers who, though higher-ranking than myself, weren't nearly as intellectually flexible and administratively competent. I had one "boss" for whom I literally had to do all of his reading and writing! These people usually saw me as some kind of threat to them, because the difference in performance between us was so conspicuous.

You say you don't want to upgrade because you don't think you can "use" your upgraded privileges. Don't look now, Kim, but that is the

mindset of a loser. During the time when I was responsible for developing the future enlisted leaders of the Air Force, I've faced that same mindset many times, and have had considerable success in dispelling it. I would encourage you to do so as well. Whether you think you can do it or not, you're right. And I think you *can* do it. And the best reason to do it is to prove that you can do it. That's why I got my college degree at a great sacrifice of leisure and time spent in more "profitable" pursuits. It was something I wanted to do for the sake of getting it done. Now, it is something that cannot be taken away from me. Perhaps getting your Extra would be the start of your own epiphany -- one which could lead you to greater achievements in your life.

>And, you're right, my abilities are quite sufficient. My abilities are also
>far superior to yours in being a much better ham.

OK -- if that's what you think, prove it. You could start by changing your call sign and start looking like a boorish imbecile with the one you have now. If you truly are the outstanding ham you claim to be, it certainly doesn't become you.

>references I generally get from people now when I am mentioning ham radio.
>The first thing I have to do is distance ham radio from either of those--

I didn't have any particular movie in mind, Kim. I wasn't proposing that we
make any direct correlation between how ham radio is or has been portrayed;
just that we exploit the resources of "celebrity" hams -- movie actors,
musicians,
whatever -- to publicize the ARS.

>Movies, movie stars and popularity is not what will advertise ham radio at
>its best. Ham radio at its best *is* the home-town individuals who've taken
>the time to get out to the local public.

I don't necessarily disagree with that, but do they have the resources to
assist in creating and producing a *national* mass media publicity campaign for
the ARS? That's what I'm talking about here. Please compare apples to
other apples.

>it for me.

Of course it wouldn't have, Ed. As soon as I mentioned it, I knew that it could never apply to you.

>Did you really have a dozen Elmers trying to talk you into becoming a ham,
>but waited until you saw Van Dyke to a 30-second TV spot? Were these dozen
>Elmers untrustworthy people, or do you automatically trust people you don't know
>more than people you do?

Don't look now, Ed, but the term "a dozen Elmers" was a figure of speech. I only had one "Elmer" per se, and I ended up teaching her more about ham radio than she taught me. She was, however, instrumental in teaching me the code.

> so...

That behavior is anal. Go to http://westid.com/amateur.htm. There, for
$59.95 plus a boxtop from any 2M HT, you can get a lovely gold anodized
official Radio Kop ID Badge.

>...it's not good hamming at all.

On one of our W0EF club repeaters, we have a roundtable gathering called the
"Afterwork Net" which typically consists of up to 20-30 homeward bound
commuters over the course of any given evening drive-time. Since many of us
use the same highways and freeways, we freely share information about
traffic conditions, including suggestions for alternate routes. Please
explain, citing pertinent FCC rules, why that is "not good hamming".

Good luck on this one now!

With all kind wishes,

When a good meteor shower is scheduled (yeah, like those are
easy to predict how good it will be!) set up some radios to do
some meteor bounce. An FM broadcast radio tuned to a station
normally out of range, like 200 miles away. With a somewhat directional
antenna. You should hear occasional bursts of reception. Do this
at the meteor viewing star party.

There's already radio services that need no test.
1) 11 meter CB
2) FRS
3) cell phones

All with type accepted (or whatever the term is nowadays)
equipment.

With the things the FCC lets hams do, like build our own
equipment, develop new modes (psk31, packet, and such),
select from many bands a frequency to use, hams need to
pass a test to be sure that we are aware of various issues
involved when operating homebrew radios, etc.

Whether if one needs the knowledge required for an extra
to operate certain subbands vs other subbands the generals
are allowed, well.... (and I do have an extra). Running a
linear on 14.300 is not any different than if it's on 14.160
as far as safety and RFI and other rules and issues are concerned.

Not really comparable to flying small airplanes, as you need
more skill to do IFR vs VFR, IIRC. And there are tests to
get the revalent grade of flying license. Or driving busses
vs just a 4 door car....

<seventythree@eightyeight.net> writes:

>What's wrong with the above? The person has keyed up and made a broadcast,
>addressing his/her comments to no one in particular. Now, I've even seen it
>happen that the person making the broadcast then ends their transmission
>without even IDing...although that doesn't happen often.

Kim:

Incorrect. An "announcement" of such a nature is perfectly legal, as
long as it is properly identified.

>Two: There are two or more people who work at the same place. These people
>check with each other often about traffic flow and route. Truckdrivers will
>also come on frequency and ask how to get somewhere. Sorry folks, but both
>examples here are those that involve communication with pecuniary interest:
>namely employment.

Also incorrect. The fact that there are professional drivers involved does
not make such transmissions illegal in the ARS. This use of amateur
radio is certainly falls within limits of Public Interest, Convenience, or
Necessity, and are thus perfectly legal, even if the parties involved are
engaged in commercial activity at the time. What they are NOT
doing is actually advertising, dispatching, or otherwise directly facilitating
the day-to-day operation of their business. They are just promoting
traffic safety by operating their vehicles in a manner which not only
ensures the safe operation of the vehicles involved, but others on the
highways.

>There's pretty much only two repeaters I really ever listen to with any
>regularity. One is the most popular repeater in Dallas, the 146.880
>machine. The other is my haunt, the 145.190 machine. At dinners and other

>discuss traffic on our repeater.

So, you not only get it wrong, but you encourage othes to get it wrong
as well? It just so happens that discussing local traffic conditions is a
perfectly legal and very reasonable and practical use of an amateur
repeater. Well, nothing new here -- just another example of W5TIT
not knowing what she's talking about, but attempting to be seen as
an authority in Amateur Radio Public Service while spewing nonsense.

>We also chide people who come on and do so...it's not good hamming
>at all.

How charming. You get on the air, and "chide" people who are actually using ham radio for a practical, useful, public service purpose -- and then you have the nerve to call yourself a Public Service expert within the ARS. You also infer that your "inner circle" of ham friends do likewise. Fools sure do love company! It's just a question of whether you found them, or they found you!

Ryan:

Anyone who has cancelled or chosen not to renew their ARRL
membership certainly has the right to complain about the organization --
but those complaints carry much more weight when coming from
actual members in good standing (i.e. dues paid). However, having
said that, I'll give you this much -- the ARRL has a good track record
of ignoring the wishes of it's paying members just as much as outsiders.
They seem to do what they think is good for the organization, whether
or not it's good for the ARS.

>closed/private status and that the locations are not Los Angeles and
>Hollywood, but somewhere else such as Pasadena and Santa Monica. I'd
>appreciate any help as I'm new to this. Thanks.

Lars:

The quick and dirty answer is that you can set up a virtually infinite number of repeaters, all id'ing with your callsign. All the FCC is interested in is who's hide to nail to the wall for rules violations -- but having more than one (or several) repeaters on different bands/freqs isn't one of them. Most club-owned repeater systems have more than one "machine" operating under a single club call sign -- perfectly legal.

You would do well to find out who the repeater coordinator is in your area. You can't set up a repeater without coordination -- it's possible, but it's just not done. Particularly in a high-density usage area (like most cities in California), your chance of putting a repeater on the air without interfering with someone else is practically nil without coordination. And you won't pick your frequency -- the coordinator will do that for you.

Keep in mind that you have no HF privileges on the FM/RPT portion of 10-meters, so a 10-meter repeater, or one with a cross-band link to 10-meters, is verboten for you, unless the 10-meter transmitter is running under the call sign of a General, Advanced, or Extra-class operator.

BTW -- and I'm sure you're going to be hit with this repeatedly, but the term "broadcasting" is a misnomer in the ARS. What we do is strictly "transmitting." "Broadcasting" implies a one-way transmission intended for a general audience. Amateur Radio operations are strictly 2-way operations intended to be conducted between other amateur radio operators, either individually or as a group network, or "net.". Certain stations do conduct scheduled one-way "bulletin" transmissions, but that is done strictly on the understanding that there

is no deliberate interference to be caused by such operation, and the content of such transmissions (not "broadcasts") are to pertain specifically to amateur radio and be of interest only to amateur radio operators. Please learn not to use the "B" word when referring to amateur radio. It's a hot button.

Great..... Think I will start All-Code Intl. Anyone using a transciever would have to pass the code test amateurs are forced to. Obviously television and broadcast am/fm radio would be exempt because that is a one-way transmission. If morse code is that important, it obviously would be important for others to learn it. Hmmm.... a cop or firefighter gets injured somehow and cannot speak, well, they could send for help in morse code! As well as other radio services too......

Ryan

I think that part of the decision to go all color was based on the fact that the B&W vs color printing differential has decreased quite a bit. QST was already printing color for some of the ads, so full color was just an extension of the process.

Besides, people want color and are willing to pay for it. How many monochrome computer monitors are sold nowadays?

(N2EY replied): That is only true provided that ALL Technicians on that date
are
assumed to be non-codetested.

True or false?

In fact that is not the case.

As of the end of June 2000, the FCC had been renewing Tech Pluses as Techs for
2-1/2 months.

True or false?

There were also an unknown number of hams who held Tech Pluses but whose
licenses read "Technician" because the FCC took some time after February 1991
to add the Tech Plus license class.

True or false?

>The nocode tech class of license went from 0% of the
>ARS in 1990 to 30% of the ARS in 2000 and all you give them credit
>for is a 4% increase?

In context. The context was that the ARS would have declined without that
license class, that it's all that kept the ARS afloat, and other such
unsubstantiated blather. The fact are:

- 30% growth from 1980 to 1990 (all US hams code tested)
- 34% growth from 1990 to 2000 (most US hams code tested)
- 34% minus 30% equals 4%

True or false?

>Your treatment of the nocode techs reminds me of the treatment of
>black athletes in the 1960's.

Ah, a new twist on the old Hitler/Nazi ad hominem. You cannot refute the simple
facts so you attack the messenger.

Your attacks remind me of how the Church treated Galileo for telling the truth.

There have been at least three download versions. The current (third)
download edition is 211 pages in 34 chapters and 2 appendices. Guess
I'll have to buy one to see how the print/download versions compare.

since the folks designing it rarely seem to think about that little
aspect.

>It says, first and foremost: AMATEUR RADIO!

Uh, yeah. So does my license.

>Then it doesn't say much else,
>really, since the arcane and indecipherable (to the public) ARRL logo is THE
>BIGGEST THING IN IT, visually speaking.

Most organizational logos are undecipherable to people who have no
experience in the organization's primary focus. How many non-medical
people can explain the link between AMA's caduceus and healing? (For
that matter, how many doctors can explain it off the tops of their
heads?) Most people with any electronic background will recognize the
ARRL's graphic.

>LOOK at that logo, on page 130 of the current QST! What are you getting

That's because it mentions six meters. For some reason, the folks at
ARRL seem to think that anything even remotely related to six meters
must be made to look like it was done by a five year old.

The same thing happens in many places during "drive times".
Here in Morris County, NJ someone usually responds to such a
"broadcast" to make it an official two way QSO. That's bending the
rules a bit, but it's a far cry from anything that constitues true
broadcasting which we believe is the intent of the prohibition.

> Now, I've even seen it
> happen that the person making the broadcast then ends their transmission

How does the first involve any pecuniary interest?

Are you saying that if hams help
each other with traffic alerts while commuting to their
jobs that such discussion is NOT permitted by Part 97?

As to the second, if there is NO discussion of actual business
activites, just how is that illegal...much less how would anyone
prove it to be illegal.

WHY? Traffic is NOT forbidden as a subject, regardless of the benefits to
any individual as to saving time on their individual commute. IF I visited
your area andwas looking for an address, would you NOT want other
area hams to respond to my query?

> We also chide people who come on and do

> and practical use of an amateur repeater....

Not only that, Larry, but I believe it comes under the
umbrella of being amateur-radio-related.

Every vehicle with a licensed amateur radio station
installed in it could, in the event of a man-made or
natural disaster, become a mobile, emergency-communications
facility. It is important that these potential
emergency assets remain free of traffic entanglements
so as to be instantly available in case of need.
Traffic advisories moved over the local V/UHF repeater
systems serve this purpose well, in addition to being
practice sessions for "the real thing".

I wrote the above with a big sh*t-eating grin on my
face. But upon re-reading it, and re-thinking the premise,
I'm not so sure I can be facetious about it. In a real
emergency, traffic and road conditions *would* be a prime
concern of mobile stations involved. And establishing
protocols for getting that information from hard sources
and out to the field units, as well as getting "ground
truth" information back, might be a very good preparation
for such eventualities.

That's certainly your prerogative.

> We also chide people who come on and do
> so...

That behavior is anal. Go to http://westid.com/amateur.htm. There, for $59.95 plus a boxtop from any 2M HT, you can get a lovely gold anodized official Radio Kop ID Badge.

>...it's not good hamming at all.

On one of our W0EF club repeaters, we have a roundtable gathering called the "Afterwork Net" which typically consists of up to 20-30 homeward bound commuters over the course of any given evening drive-time. Since many of us use the same highways and freeways, we freely share information about traffic conditions, including suggestions for alternate routes. Please explain, citing pertinent FCC rules, why that is "not good hamming".

Good luck on this one now!

With all kind wishes,

de Hans, K0HB

True but your conclusion is false. The truth is that the population
of the ARS went from 0% nocode techs in 1990 to 30% nocode techs in
2000. The great majority of the growth in the ARS for 1900-2000 was
directly attributable to the nocode techs. Denying that fact
won't make it false.

1034. Promoting Amateur Radio -- Part One

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-09 15:53:44 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <ub62ibk55qvk8b@corp.supernews.com>
Source record: 40301

Promotional Campaigns for Amateur Radio -- Part One.
Val Germann,
KC0MUB

Five years ago this spring I represented our local amateur astronomy club at several "hobby fairs" for kids here in Boone County, Missouri. The target group was middle school and junior high kids and my main function was to deliver a slide show and talk on amateur astronomy, and our club. I also had a couple of tables and a homemade telescope, along with sample star charts and a couple of other "handouts" aimed at kids (and, indirectly, at their parents!). We had some stiff competition since the state conservation department, which was promoting fishing (!), and had a tank with some bass in it as well as an owl, and "WHOO" knows what else. But, all of that helped draw a crowd.

For one of these fairs our group was set up directly adjacent to the local amateur radio club and what they did was set up a temporary station at this location and begin to operate from it. They had some handouts available but they were not aimed at kids, or even the parents of the target kids, really. And they did not truly and actively engage the passers-by at this event but rather waited for one of them to come up and ask something. And, quite frankly, they looked too busy (with operating) to be bothered most of the time they were on the scene. I could see right there, without any doubt, that amateur radio operators, a lot of them, were public-relations-challenged.

I had that homemade telescope, a kid-sized one, right out front at our booth and used it as talking point as people passed by. I had a designed-for-that-event handout ready to give away, with our club's logo and information about it attached. One of the handouts was a star chart that I explained was good into the indefinite future and should be kept. On that handout was a list of our upcoming "star parties" where kids could get a look at the night sky, from a location known to be safe for the general public. Also on the handout were the names and phone numbers of three of our members.

I've been doing this kind of thing for about 20 years here in Columbia and over the years I think I have done a lot of good, both for our individual club and for amateur astronomy. However, one of the things that I am also responsible for is changing our name from "Something-Something Amateur Astronomers," which had been in place for 49 years, to "Something-Something Astronomical Association." In marketing, LITTLE things (and no one but me had even thought about the connotations of our name) mean a LOT. Let's keep that in mind as we move along.

The consensus today seems to be that amateur radio needs a lift, needs some publicity, needs some kind of promotional campaign, in spite of the fact that without any such campaign there are now about 650,000 amateur operators in the United States. And those operators have all passed at least one written exam, which is impressive, I think. So, in one respect I have to question all the angst about the demise of amateur radio, in general. That is, I cannot see any threat, even long range, to the existence of SOME kind of ARS, complete with FCC licensing and at least SOME allocation of radio frequencies. However, I can certainly understand concerns about what KIND of ARS will exist in the future, and how MANY frequencies will be allocated to it. THAT is certainly understandable.

So, in that Op-Ed piece in the March QST, of article length, we read that "the future of amateur radio is at stake" in connection with the "Big Project" and its associated elements. Well, anything and everything affects "the future" of everything, in some respect or another. This expression is called, in advertising, a "preemption," meaning that anyone can say it without proof, as long as you say it about your product FIRST!

So, the concern HAS to be, more usefully, about the NATURE of the FUTURE of amateur radio, about what KIND of amateur radio will exist down the road, and how much "airspace" it will have. That is, it's about the QUALITY of amateur radio's future, that quality depending in part on the QUANTITY of amateur operators and their public visibility, since the "airwaves" are public property and only used in behalf of the public by the ARS. "Democracy at work."

Therefore, what we have here is a POLITICAL problem, in part or in all, and as we know politics is about mobilization, either of numbers of people (voters) or amounts of money (influence). So, how should amateur radio proceed, since we don't really have either?

Well, right off I see a huge problem which is not directly related to either money or numbers: There is NO such THING as "amateur radio" as an entity. There are only amateur radio operators, licensed by the government and buying their equipment from (mainly) overseas producers. That's it, to a great degree, and that ain't good.

Some of these operators are organized into local clubs but many are not. Some of these operators belong to a national organization, the ARRL, but most do not. However, in spite of a "minority position" within amateur radio, the ARRL seems to have this quasi-governmental function in that FCC minions turn to it, in large part, to act as a mediator, organizer and enforcer with amateur operators in general. It's all a bit strange, in some ways, as has been pointed out from time to time.

This mystical relationship could be the subject of a LONG research paper, which would cost a lot of time and money to write. However, it would hardly repay the effort, most likely, since no one's career would be advanced thereby, not even the author's. So, lacking such material I will have to proceed without it.

To continue, the overwhelming problem with "amateur radio" is that it is only partially organized to defend its "airspace," which is a political construct supported by the whims of a government agency acting for "the public." Unfortunately, this public will never know what amateur radio is about, no matter HOW much work amateurs do to promote themselves. Not only that, other entities, most of them large corporations, are also in the arena, with BIG MONEY (influence with government), casting covetous eyes on sections of said "airspace." And they, too, have a claim on behalf of the public.

So, in military terms, the "threat analysis" could be seen as dire, in some respects. And it likely is.

In view of all of the above, our promotional campaign will in large part be concerned about the brochure, about appearances, about how it looks, and NOT about how it actually WORKS across the nation. We don't have time for that and we don't have the control. The clubs will do what they want, most of the time, and that may or may not be what the national organization desires. And the individual amateurs will do what they want, BIG TIME, and on average that will have little to do with what the national organization and its staff desires. And with most of these unconnected people what the FCC's Bob Cross wants is total terra incognito, and that's being charitable!

As for the politicians, they come and go, are elected and de-elected, with dizzying speed. Not only that, it costs time and money to keep up THEIR interest in YOUR interests. That's a treadmill that never stops.

So, where are we? Well, if amateur radio depended on the general run of taxpayers to vote its meager allocation of government attention, it might get it and it might not, probably NOT these days. It would likely be a closely run train! And there are NOWHERE near enough hams in each Congressional district to change that outcome based on sheer numbers. Yes, it is indeed: Democracy at Work!

Therefore, it's about influence, not voters. Yes, it's about influence with a very few people, the people who holding a few elected or appointed positions in Washington and environs. And now we can understand, I think, the "Big Project."

End, Part One.

1035. Promoting Amateur Radio -- Part Two

Promoting Amateur Radio -- Part Two
"Amateur" Radio and Little Projects
Val Germann
KC0MUB

In Part One I made a case for the inherent vulnerability of "amateur radio" to the not-so-anonymous "forces of history" which operate in the political realms where the service actually exists. That is, the ARS is a creature of government, primarily appointed government, and is subject to buffeting from a dozen different directions. And it is not truly organized and can even be said not to exist. And so, in partial response to an intensification of several old political problems, the ARRL has cranked up the "Big Project," its very name signifying its importance, at least to some.

But it's really about the ARRL, and an increase in its influence in Washington, and not about "education," or "technology" or "the public" or even "amateur radio." Oh, sure, it's partially about these things and no doubt will do some good. But, the logo says it all: The ARRL is at the center of things, and the meta-purpose is to preen the beautiful plumage of the flagship organization for whatever it is that amateur radio has become. What effect, nationally, will the "Big Project" have? Well, one thing for SURE it better do is raise the good-vibe quotient for the ARRL inside the Beltway. If it doesn't do that, well, it's a loser, no matter what happens out in the Flyover Zone.

Quite frankly, I've always been skeptical of Big Projects cooked up at great distances, funded by foundations and corporations, and then visited upon the masses. And this is especially true if those Big Projects demand, one way or another, a commitment of significant time and money on the part of that mass. That is, what is called The Rockefeller Method (copied by nearly all foundations since 1910) uses money to in effect co-opt the time and effort of others for the goals and needs of the foundation, at dime-to-the-dollar rates. It is not about anything else, really, except as a by-product.

That is, look at the exact opposite of this, the Carnegie Library Program. This thing just builds libraries and gives them to cities, mostly small ones, period. Now, that is more like what people are really thinking about when they hear the word "philanthropy." But what is actually going on, most of the time, these days, is something very like social control. Or, at a minimum, a thinly disguised special interest is using the public weal (a tax write-off) to advance it's own special interests. Ho-Hum!

So, in the Big Project, supplying material to schools is fine, I guess, but who is going to teach the material and who is going to pay that person? Well, the material will be taught for free, as an additional task, won't it? Sure it will. And some very small "grants" will be made, to people who have

already spent a lot of their own (or their school's) money on amateur radio. What is THAT, I wonder? It's NOT what St. Paul would call "charity," I don't think. Finally, I suppose there will be amateur stations set up in a few schools, with some of the equipment donated (for a tax write-off), mostly in the larger cities. And no doubt those stations will do some good. But they're likely to be few, very few, compared to the brochures, and statements to officaldom, which WILL be many.

However, in all of this big-ness and in all of this project-ness, the bottom of the food chain, the most important part, is just plain missing. And why is it missing? Well, it's missing because it advances no one's direct or even indirect interests, that's why. No, real EDUCATION is too diffuse for that, which is why it is funded, almost exclusively, by the poor old taxpayer.

What I do here in Columbia, is "little project" stuff. I attempt to educate people, mainly kids, about science and astronomy, FIRST, and then let them ask me, if they want, about our local organization. I try to put no additional burdens on teachers or librarians because, well, they have a lot on their plates already. In fact, I try to GIVE to them, up front and with no strings attached, something of value to them. I do this because I believe that, sooner or later, some of that gift will return. And it will return, and be compounded, not to me or by me but BECAUSE of me. And others will benefit in ways that I will never know. At least that is my HOPE. Like St. Paul, I usually don't let one hand know what the other is doing when it comes to this work. It's about GIVING, not about getting.

Is THIS related somehow to the "benefit to the public?" I think so. That is, the word "amateur" means you are doing something out of "love" for the thing itself, and not for what you might get out of it economically or in political influence. THIS is something I think "amateur radio" (if it exists) might think about with some "profit," though perhaps not of a monetary kind.

What does it matter if one gains the world but loses one's soul? And I'm NOT talking about heaven and hell.

One-way transmissions are not necessarily against the rules.

Amateur repeaters exist in large part to increase the range and
coverage of
mobile amateur stations. A traffic advisory from a mobile amateur
station is
therefore quite relevant to the amateur radio purpose of the repeater.

A repeater or mobiles used to gather traffic info for broadcast by
actual
broadcast stations is a different situation.

> The same thing happens in many places during "drive times".
> Here in Morris County, NJ someone usually responds to such a
> "broadcast" to make it an official two way QSO. That's bending the
> rules a bit, but it's a far cry from anything that constitues true
> broadcasting which we believe is the intent of the prohibition.

Here in the Philly area, the repeaters are busy during drive time and
there is
no opportunity to make a "one way" transmission anyway. Hams simply
mention the
traffic conditions as part of the conversation. Often the observations
of one
amateur will save others from being stuck in traffic.
>

Lack of proper identification IS definitely against the rules.

I agree with Bill 100%. Unless you are "on the clock" while commuting,
there is no pecuniary interest.
>
> As to the second, if there is NO discussion of actual business
> activites, just how is that illegal...much less how would anyone
> prove it to be illegal.

This one's a bit sticky, since the business activity of a truck driver
IS
getting from origin to destination, and he/she IS "on the clock" while
driving.
One determining factor is whether it's an emergency-type situation or
an everyday occurrence.

> > There's pretty much only two repeaters I really ever listen to

So other machines may be quite different.

> > At dinners
> > and other get-togethers, we on the 145.190 machine have pretty
> > much agreed we will not discuss traffic on our repeater.

Who, exactly, made this decision, Kim? The owners of the machine? Is
it a formal policy? Was it put to a vote of the membership at a formal
meeting?
>
> WHY? Traffic is NOT forbidden as a subject, regardless of the benefits to
> any individual as to saving time on their individual commute. IF I visited
> your area andwas looking for an address, would you NOT want other

> area hams to respond to my query?

Sounds like it, Bill.
>
> > We also chide people who come on and do
> > so...it's not good hamming at all.

I think Hans described your attitude on this issue perfectly, Kim.
>
> Sorry Kim, I strongly disagree that there's anything about it that
> is "not good". If it was, the FCC would have spoken to it
> years ago.

Yup. I don't think Riley would say that discussing traffic was moving
amateur radio one step closer to extinction.

So all we have is one definite illegality (not identifying) and one
possible
sticky situation (truckers).

--

It seems to me that using amateur radio to help other hams find their
way, save
time and fuel, improve highway safety and avoid traffic congestion is
a good thing and not in violation of Part 97 in any way. Kim's overly
restrictive interpretation of the rules opens up other questions:

- If my car breaks down outside of cellphone coverage, is it OK to use
the autopatch to call AAA? After all, some tow-truck outfit is going
to get paid
to help me. (FCC has specifically said this is OK, btw).

- If I'm in an unfamiliar town, is it OK to ask the locals on the
repeater for
directions, good places to eat, visit or stay, etc.? Those businesses
stand to make money from my patronage.

- How about talk-in to a hamfest? The group running the 'fest stands
to make
money from attendees....

What DO you folks talk about on the repeater, Kim?

Certainly we could start arguing about EXACTLY what is legal and illegal, but common sense should prevail. I doubt anyone would get in trouble over assisting motorists in avoiding problem areas on the road. Years ago, whilst on Guam, we had a typhoon which knocked the coast guard tower down on Rota. We sent a chief petty officer over to re-establish communications. Apparently the coast guard station was damaged and the chief happened to be a ham - and used the ham shack. Sure, military comms on 75 meters are prohibited, but there it was - 'sparkplug one this is sparkplug'. The guys at the commsta had the rf gain up too high for the local oscillator, so the ssb copy was poor. 'sparkplug one this is sparkplug, you are loud, but garbled'. Hearing this, we gave a call 'sparkplug1, sparkplug, this is KG6AAY standing by'. Inside of 15 minutes, KG6AAY was handling all relief traffic and passing it directly to Commander, Naval Forces, Marianas. Captain Delany made an appearance to secure the amateurs from all other duties and to man the ham shack 24/7 until otherwise ordered. Illegal? Military comms to an amateur station? On 75 meters? Getting the hams relieved from duty (work)? Captain Delany was happy; the FCC liaison officer was only a lieutenant. Besides, the Captain was in charge and I doubt anyone on Rota would have argued the decision.

73 from Rochester, NY
Jim - ps ... this story is getting old. I'll try to avoid any reposts.

Er, Len ... I already HAVE a high-paying industry job ... have had for years and it just keeps getting better.

> I hear that managers are really looking for 1x2 and 2x1
> ham callsign holders! :-)

Er, Len ... I am a manager ... a senior level one at that. Most of the people I've interviewed and recommended for hire in the past 5-10 years have had at least a MSEE, most a PhD in EE, and a number of years of experience (I have to be VERY impressed to be willing to undertake to train a "fresh-out," though I have done so on occasion ... I tend to let someone else break them in first :-)

Amateur call, of any class, would not be a significant factor in hiring considerations, though it would generate some conversation that would help me to evaluate someone's open-mindedness and technical abilities in areas that might be a bit outside of their mainstream career experience.

You got most of it right. The location was Saipan, not Rota, and the
Chief didn't use the ham shack, he (we) set up comms using a Swan
500C and a Drake TR4 at Kobler Field. One of our antennas was
the chain link fence surrounding the passenger terminal at Kobler.

You can get more details in the September 1968 issue of QST in
the public service column. I still have the letters of commendation
from Capt Delaney, Admiral McCain (yes, the Senators dad), and
the Commissioner of TTPI.

What was interesting at Intel was that the nocode Techs
tended to be upper level managers. The designers tended
to be generals and advanced. The IT people tended to be
the ones with Extra licenses. For the Extra license, the
correlation to IT engineers/technicians was uncanny. Of
course, that was before restructuring. I retired from
Intel in 1998. But the correlation at that time was
clear - the lower the ham license class, the higher
the grade level at Intel. In fact, the highest grade
levels didn't have a ham license at all. :-)

:-) Tsk, tsk, tsk. Obsession by the clench-fisted monkey coming out.

> Where's the answer to your assertion that there are radio services >created for "strictly recreational" applications, Your Wrongfulness?

Amateur radio is defined as a non-pecuniary radio activity engaged in for personal reasons by the FCC. In the ITU-R it is further defined as a "trivial" communications activity where it isn't done over commercial carriers.

To any but those into strong sado-masochism, the above is another way of defining a recreational hobby. HOBBY. Recreation.

Wrapping oneself in patriotic bunting and shouting "service!" as the "real reason" for engaging in such an activity is delusional. While delusions may be rewarding emotionally to an individual, they are still delusions and unuseable as definitions applying to all.

In Part 95, Title 47 CFR, there are no strict connotations on NOT being recreational in GMRS, FRS, CB, or R/C radio services but to deny their primary aspect as being recreational is also delusional. They were all created for individual citizens for their personal use and not as any "service" aspect. Public safety radio services are covered under Part 90, Title 47 CFR.

>That's kinda like sending a blind man to a video store...

Both Wherehouse and Blockbuster (near that intersection) carry audio-only tapes for the sight-impaired. Why do you make fun of blind people?

I described why I was there. It was a convenient place to examine the contents of periodicals without having to drive another three miles to Barnes & Noble (next to Media City Mall) to do the same thing. It was also convenient to examine the LCDs of various manufacturers in the presence of incident daylight for another purpose; Yaesu, Kenwood, Icom, and Alinco all have different forms of backlighting on their LCDs. That was handier than driving an extra mile to Electronic City which has very few windows or to the closer Fry's Electronics which has no windows.

>>A number of years ago, a whole group of us..(SNIP)
>
> Group of us who..??? More snotty "engineers" sneering at the unwashed
>masses?

I don't recall any of the group having a cold or nasal problems.

At least one-third of the group were already licensed in the amateur radio service. It was a group with a mutual friend who would receive a surprise birthday party and a brand-new ham station.

In the usual sado-masochism exhibited by the monkey boy, birthday parties and ham radio are not enjoyable activities.

> And this comparison was for what..??? You doing research for "Consumer
>Reports" now?

No. For another purpose.

>>You MUST do a break-in to every exchange with another. It's a form
>>of JAMMING and you feel righteous about employing such tactics.

Yes, it does make it false. This is not a reality-based forum.

Rationalization is where it's at. If over 200K new licensees came
in...and stayed at the no-code-Tech level...that isn't "proof" in the
logical sense. It is only "proof" that those Techs are "not 'real'
hams.'" :-)

Of course you did, old timer.

Fred Allen died in 1956. To have been familiar with his radio show
meant having lived then and having gone through language school
with at least a novice class rating on speech cognition.

The Internet has been in existance for only 11 years.

"Hod carrying" hasn't been done for decades. Few know what a
"hod" is.

What next? A claim you were O. Henry's proofreader?

Ahem...take a look at the rate card for SPECTRUM, the IEEE membership magazine, and tell me that it "doesn't have advertising revenue." Sorry, but it pays for itself.

You are thinking of the many and varied Transactions plus the Proceedings...but even there they have some advertising in some editions.

Ed, if QST were to exist without any advertising, the ARRL membership fee would have to be OVER $200/year.

Heh. A youngish extra named Eric June tried that with "Know Code
International," even wrote a couple Comments on 98-143, had a
website...and engaged in a lengthy "debate" with several in here
prior to the R&O for restructuring. I can copy his last message in
here if you wish...the KCI website was taken down long ago.

Hans Brakob and I had a long-ago lengthy exchange where he
implied that morse code ability would "help" those with strokes or
similar disabilities regarding personal communication. That over
some local Minnesota research project "looking into" the subject.
My mother was then in a nursing home, a victim of too many TIAs.
I challenged him on being able to teach a stroke victim a new
(and non-natural) method of personal communications but no
viable answers were forthcoming, only vague generalities.

I rather liked "No SSB International" for being outright sarcastic
and mean-spirited, sort of fitting the author, Jim Kehler. It had a
jazzy website, a parody of the NCI format. Totally mean, it
pulled no punches, and had a negative effect on influencing
anyone but an already tried-and-true PCTA. I can't find NSI
anyplace on the Web. It must have failed. :-)

Callsigns comprised of all letters and no digits are assigned to commercial broadcasters in the AM (200m) FM (3m) and Television services, excluding low-power TV stations (which have the pattern $*##*$$ where the digits represent the TV channel number).

That was the main reason for having different levels of licenses with
differing requirements and *an experience qualification* included. The
Extra class was not available to anyone who had not held a general or
higher class license for at elast two years. Of course, with no actual
use requirement that wasn't a perfect solution, but it was assumed that
anyone interested in advancing to Extra would put a station on the air,
and gain experience at using, maintaining and adjusting it.

It is curious that FCC would abandon all this yet retain the separate
license classed. Perhaps it's a prolonged process done in small
increments to keep down protests. Not that it has.

>
> Not really comparable to flying small airplanes, as you need

> vs just a 4 door car....

Yep. No pilot ever gained his license on the strength of any battery of
written tests. That only gets you the right to move on to the real

thing, the practical experience phase from which one emerges a licensed pilot only after convincing a hard-nosed FAA examiner that he has indeed learned to actually, safely fly the plane.

He used 5 letter callsigns. Broadcast stations only have 4 or
sometimes 3 letters. I don't know if any radio service uses
5 letter calls without numbers.

Geeze, if it's gonna be that easy, would you care to donate to the
M for M fund? Otherwise known as NNI (no nothin' international).
M for M stands for 'Money for Me'. Seriously, I can understand the
non-necessity for Morse; that said, I will state that some testing and
knowlege is necessary. We don't need shoot-outs (where we power up
multiple tens of kilowatts and shoot-out the gonads). We need people
with some basic concept of dc, ac, and rf. We need people who have at
least a basic understanding of what is meant by 'tuning' - whether an
antenna or a pi network (or L network or whatever). That said, I'm
still interested if you would care to donate to the M for M fund ...
;)

> trouble over assisting motorists in avoiding problem areas on the road.

Agreed, and
let me be VERY clear. If two or more hams are discussing
traffic conditions on the road, that is 100% legal. I can see
NO way the topic violates ANY rule in Part 97. I don't
care if two of the hams worked for the same company and
talked traffic all day...there's just nothing then that crosses
the line as to a violation.

The "broadcast" to no one in particular probably is a grey area,
but unless it was done repeatedly (e.g. If I did such broadcasts
every day at 8am to no one at all), I'd doubt it would
even be noticed.

> Years ago, whilst on Guam, we had a typhoon which knocked the coast

Sounds like a true emergency and wouldn't be a violation
at all. Then too, the military can pretty much take over
the airwaves anyway if they so need.

> The guys at the commsta had the rf
> gain up too high for the local oscillator, so the ssb copy was poor.
> 'sparkplug one this is sparkplug, you are loud, but garbled'. Hearing

> and to man the ham shack 24/7 until otherwise ordered. Illegal?

Not illegal in my book...in fact, the military could have simply
used the ham station as its own without any need to use
amateurs at all. There's no worries about military using
amateur equipment at all. No type acceptance needed.

> Military comms to an amateur station? On 75 meters? Getting the hams

What you should do is find an existing club with an existing repeater
system and get involved in it. Visit several clubs to find a group
you'll enjoy working with.

>

> operator.

That can be fixed. Just upgrade to general or extra.

But you can use such a machine as a tech, as you are transmitting on
a frequency you are permitted (like 2 meters) and the machine
(under the control of a general or extra or advanced) retransmits
your voice onto 10 meters. Let me know if I got this
wrong, but I can't violate this rule as I have an extra and can
use any unused ham frequency appropriate for the mode
I want to do (except that mini-band at 219-220 MHz which
is for IIRC coordinated packet and digital work unless I set up
a station after I get coordinated).

Ditto my last...but again, IF the conversation?QSO is only about traffic
conditions, why is it legal for you and I to discuss, but not a trucker
who might happen to be a ham? IF the subject itself is legal for
me, it should be legal for anyone with a ham license.

Hans, thanks so much for the correction. It has been years. I was in the shack and actually made initial contact; however I had to go on watch. The other guys that were in the shack were the guys that were secured from duty. There is another story after this which I do have straight. e-mail me at aa2qa@frontiernet.net if you want to hear it (it is quite short).

73 and thanks from Rochester, NY

Then, you shouldn't have to ask. However, just to appease your fluffiness, I always ID with "This is W5TIT/XXXXX" where X=the callsign of the control op. Except for Field Days and there I ID with my callsign every 10 minutes, as required.

Well, that's fine for you. I am one of those who doesn't like discussing traffic on the air. In fact, when I am asked I tell them it's the same shit, different day. And lunatic who thinks they are going to get onto a highway around Dallas at drive times and find good traffic isn't worth my time on the air.

Well, DUH. What does make their transmission illegal (in my opinion) is
that their questions are either "where is [company name] and does anyone
know how to get there?" That is a direct question related to getting them
where they need to be to discuss business. I err on the side of caution and
will not get involved in such discussions. It's their ticket...and I think
they are stretching the rules when they do that. The only reaction I have
to it is that I would find it surprising at all *if* they were ever to be
brought into question for it.

>
> This use of amateur
> radio is certainly falls within limits of Public Interest, Convenience, or
> Necessity, and are thus perfectly legal, even if the parties involved are

>

Then you are stretching what I believe to be a rule that says absolutely no transmissions may be made if any party has a pecuniary interest in the conversation. Getting to your office, getting to your truck terminal, getting to your delivery site, are all examples of items where a pecuniary interest is primary to the discussion. I have a CB radio in my truck specifically for the purpose of discussing those things.

Well, I wouldn't do it...put it that way. I guess I just don't believe in
bending the rules. However, you must realize that the same people who do
things like this are very quick to jump down the throats of a new
operator--or, hell, even a seasoned one--that uses "10-4" or some such thing
on ham radio. Now, there's absolutely, 100% no illegality there, yet those
same people who "bend the rules" every day will do just that.

There's one operator in particular who does this all the time. I doubt
seriously that it is any other than purely forgetful that he does it.
However, a rules violation is a rules violation.

No. I am saying that is the way I *interpret* the rules in Part 97. Other hams can do whatever they'd like, but I'll not be discussing topics like that because I believe they are rules violations.

>
> As to the second, if there is NO discussion of actual business

>

Wait a minute, Bill. If I steal something from a store, yet no one "catches" me--how could it ever be said that I did something illegal? A discussion of traffic related to getting to your place of employment (a pecuniary interest) is--to me--a rules violation.

That's quite different. If you are "just looking" for how to get somewhere, that certainly isn't related in any way to a direct pecuniary interest you have in getting there (unless it is to get to a business meeting).

Oh, I don't think it's all that great a deal to them. Nor is really all that great a deal to stir up so much conversation. However, my opinion stands that it's breaking the rules. If not, where's the harm in my erring on the side of caution?

And, that's your interpretation, Bill. I think different. I also don't like it. I think it cheapens ham radio. This is pointed up by the fact that many people who are near enough to my equipment in the office and listen will respond to my "would you be interested in ham radio" with "why would I want to talk about traffic, the weather, and how sick I've been?"

>

It is. And I don't like to get myself into gray areas, either. Remember, I don't think I made any comment about reporting violations. I simply said I believe these types of conversations are stretching the rules. Gray areas are the test waters, and you probably know that.

Like it or not Larry, I will always associate you with "My Favorite Black on
the Bus..., Knuckle dragging No-coder with a Southern Accent, Don't let the
door hit you on the ass..." because those are the things you've actually
said about amateur radio.

Sorry, but you not associate whatever you call "NTI" with No-Code
International because there is no association.

Ed, now that you've broadcast it, someone will spend a few bucks and take it.

I once said across a repeater that I would setup a juno email account using my callsign. Less that two hours later I tried and found that it had already been taken. There are some very mischevious people in amateur radio.

>

So lets recap a bit here... You got an engineering job even though you have no engineering degree.(you had experience designing cordless phones). Now you're the authority who passes judgment on MSEE and PHDEE job hunters. You couldn't be bothered to finish your own degree but by gawd you're the most competent of the competent when it comes to passing judgment on those who did. Who did you know -or whatever- to fall into that one? Oh, you're going to tell us it was all skill and your glowing personality that did it. Right.

My, My. You and Cecil are sure doing all you can to give engineers a really *bad* name.

> Amateur call, of any class, would not be a significant
> factor in hiring considerations,

You sure have that right. A ham license today is a real laugher when it comes to any sort of proof of technical ability of any sort. Don't let anyone fool you into believing it was always that way. I imagine you already do believe it.

though it would generate
> some conversation that would help me to evaluate someone's
> open-mindedness and technical abilities in areas that might
> be a bit outside of their mainstream career experience.

AAHHHH........ The minute he mentions his CW contact from last night he gets the "don't let the door hit you in the butt on your way out" treatment, regardless of what else he might be involved in. We know, Carl. You poor fella.

A truck driver's job - what they are paid to do - is getting the vehicle from A
to B
safely and efficiently. The use of ham radio for to help get the vehicle from A
to B in a nonemergency by people being paid to do so MAY (heavy emphasis on the
"may") cross the line of "pecuniary interest. I'm not sure.

OK, consider this:

Suppose a ham decides to put up a tower and a bunch of locals show up on tower raising day to help out. Everyone brings amateur HTs to help coordinate the activity. The HTs are used extensively, saving lots of time and effort. Is this OK? Of course.

Now suppose some of the hams who helped out form a company and install radio towers commercially. Can they legally use their amateur HTs on the job for the same purpose as when erecting the ham tower for free? I don't think so.

Even though it's the same purpose and the same people, in the first case they are a bunch of friends helping out a fellow amateur and in the second case it's a bunch of professionals doing a job.

Let's see what I can do here...

There is presumably an employee of ARRL, or subcontractor who does page layout for the magazine. This person is being paid to put the artwork and articles together.

Since there is someone doing this, there are people with a sensibility and who are trained to do this sort of thing. That is who you look to hire to do the job.

Most successful enterprises hire a person who is trained in their field to do the specific jobs needed. Kind of like if you need an electronic technician or engineer, you hire one. You don't hire an illustrator to do the job of a technician. Or shouldn't

All this probably sounds kinda patronizing and obvious. Bear with me a moment though.

That wonderful device, the computer, has made Engineers and technicians believe that they are also illustrators. And we see the results all too often. The purchase of Adobe Pagemaker and Photoshop no more makes an Illustrator than a full set of Craftsman tools make a person an auto mechanic.

So it is very possible that the accounting department will buy into the argument that if you just have an engineer who has a few hours extra do the layout, you don't have to spend any money on illustrators. They are 100 percent right. They are also 100 percent wrong. It is analogous to deciding that you can save thousands of dollars each year by foregoing medical treatment.

I am a Ham and a new member of the ARRL, and I DO want attractive
content. I guess they need to decide how many of each type there are!
8^)

> > In a hobby where
> > so many try to be precise and accurate, they are satisfied with what
> > amounts to a visual typo.
>
> I thought the issue was design, not accuracy?

Yes, the issue IS design. As a person who works in this field, I can
assure you that we consider a poor design as offending as a typo, or a
ham RFI'ing all over the place, or otherwise following poor practice.

Again, for the duration of time that guy was a member he has full right to complain or compliment on what had occurred from the date he became a subscriber till the time he cancelled or the duration of his subscription ended. He doesn't have the right to criticize (according to others statements here in this group) about the time before then, or after, just during.

However, having

That is a statement that has been said here, and to me and I seem to agree with it also. I am just sick of these people that seem to put the ARRL higher than God himself.

A little reality here ...

1) the stock of Lucent didn't "promptly start to tank" ... the fall was
quite some time later and unrelated to my division's performance

> Should we draw a corollary here? What happened to all those neat spread
> spectrum cordless phones Lucent was selling? Hey, they *were* pretty
> good-I even bought one a couple years ago and it really is a good one.
> But they have

But they have what? Lucent sold the division that makes the cordless
phones a while back ... I didn't build the phones, I designed the chipsets
that made them possible.

> So lets recap a bit here... You got an engineering job even though you
> have no engineering degree.

Yup been doing it for about 32 years ... my reputation in the industry
speaks for itself.

Yes my "school of hard knocks education" is non-traditional ... so
what? Bill Gates doesn't have a(n earned) degree either to the best
of my knowledge (nor do many others), but he's done pretty well
for himself. (I should do 1/100th as well :-) But I do well and I'm
happy.

> You couldn't be bothered to finish your own degree

No ... I didn't NEED to finish a formal degree, so I didn't waste
the time.

> but by
> gawd you're the most competent of the competent when it comes to passing
> judgment on those who did. Who did you know -or whatever- to fall into
> that one?

Knowledge, experience, and results count for a lot Dick ... that's how
I "got there" ... I didn't "fall into" anything ... I worked my ass off for
it.

> AAHHHH........ The minute he mentions his CW contact from last night he
> gets the "don't let the door hit you in the butt on your way out"
> treatment, regardless of what else he might be involved in. We know,
> Carl. You poor fella.

Don't be absurd, Dick ... I would never discriminate against a competent
applicant (or any ham in any way, for that matter) on the basis that he/she
was a CW user ... I have no problem with CW users ... except when they
insist on trying to force EVERYONE to be CW users.

>emphasis on the "may") cross the line of "pecuniary interest. I'm not sure.

Jim:

If it did, I'm sure, as I believe Bill Sohl has already noted, the FCC
would have been required to address that issue -- and I'm sure the
result of such action would be well known among radio amateurs,
if not specifically codified in Part 97. In over twenty years as a ham,
I've not heard any hint of such operation being anything other than
perfectly legal, if not affirmatively sanctioned and encouraged by
the FCC, which I'm sure it would be.

>>> > As to the second, if there is NO discussion of actual business

>>> > prove it to be illegal.
>>>
>>> This one's a bit sticky, since the business activity of a truck driver
>>> IS getting from origin to destination, and he/she IS "on the clock"
>>> while driving.

Not even close, Jim. Getting that truck *safely* and efficiently to it's
destination is definitely within limits of PICON. If the drivers were
using ham radio to coordinate the pickup of loads, negotiate fees,
or advertise their services, then *that* would be a violation of the
"no-business" rule. However, when they are simply taking advantage
of information related strictly to safe vehicle operation, then they
are perfectly OK. In fact, I've always believed it is a great failing
of amateur radio that there isn't a widespread network of ham
motorists and fixed-station operators specifically dedicated to this
task, as there is on the Citizen's Band. Considering the great
emphasis placed on public service in the ARS, I think we're missing
out on a golden opportunity to serve in such a capacity.

>>Ditto my last...but again, IF the conversation?QSO is only about traffic

Apples to oranges, Jim.

>Now suppose some of the hams who helped out form a company and install radio
>towers commercially. Can they legally use their amateur HTs on the job for
>the same purpose as when erecting the ham tower for free? I don't think so.

Of course not. In that case, they should invest in some commercial HT's
which could serve the same purpose, but not on amateur frequencies.

>Even though it's the same purpose and the same people, in the first case they
>are a bunch of friends helping out a fellow amateur and in the second case
>it's a bunch of professionals doing a job.

Exactly, but this example doesn't relate too well to the issue of professional
drivers using amateur radio to give and receive traffic information,
directions,
or report accidents. All of the above serve not only the interest of that
particular driver, but the general public as well, since it is in the interest
of
the safe and efficient movement of traffic. I am sure that if the FCC were
required to specifically address this issue, that they would find it to be
completely within the Basis and Purpose of the ARS.

Kim:

There is absolutely nothing "gray" about utilizing amateur radio to
facilitate routine commuting by the dissemination of traffic reports by
radio amateurs. Shudder all you want, but this is about as black &
white as any policy discussion we've had here. Traffic reporting is
a perfectly valid and legal amateur radio activity. End of Story. If
you think it is not, provide some convincing proof, or at least a valid
argument. So far, all you've done is to make yourself seem to be
totally unqualified to offer any opinion at all on this subject.

>73,
>Ed Hare, W1RFI

Ed:

OK, fair enough, then. I tried yakking into a microphone on HF, and decided I didn't like it, either. I found that it didn't provide any sort of intellectual challenge, and required a higher tolerance for boredom than I possess. Like ham radio in general, I guess it isn't for everyone -- and shouldn't have to be! However, I believe all radio amateurs should be familiar with our simplest, most practical, effective, efficient, and universal mode of communication -- Morse/CW. Like most people that don't "like" CW, I believe what Carl really doesn't like about it is the effort required to achieve a useful level of proficiency at it. Operating a PTT switch is, after all, much easier, and provides a higher level of instant gratification. That seems to be a common factor among those who have whined the loudest about the code testing requirements in the ARS...although they certainly can't, and won't, admit it.

Kim:

All of the above are perfectly legal and allowed topics of discussion
on amateur radio; the difference is that the traffic and WX discussion is
much more practical and useful than the daily Lumbago reports.

>> The "broadcast" to no one in particular probably is a gray area,
>> but unless it was done repeatedly (e.g. If I did such broadcasts
>> every day at 8am to no one at all), I'd doubt it would
>> even be noticed.

>don't think I made any comment about reporting violations. I simply said I
>believe these types of conversations are stretching the rules. Gray areas
>are the test waters, and you probably know that.

There is nothing remotely "gray" about discussing traffic conditions
on an amateur radio repeater system. The fact that you think so only
demonstrates the fact that you are not qualified to make such judgements.

>Getting to work is not an emergency...unless, say, you were a doctor and
>someone's life depended on you getting through the traffic quickly. :)

Why would traffic information, relayed to people involved in routine commuting, be a "gray area" just because it isn't an "emergency?" Do you possess some weird notion that ham radio must be used strictly for "emergency" communications purposes? One of the best uses I can think of for our VHF/UHF privileges is to establish communications that serve practical purposes -- such as facilitating routine, daily commuting. Perhaps if this was done in a more widespread manner, there would be fewer "emergencies" on our highways! Or don't you think that preventing accidents and helping motorists to avoid delays serves your Ham Hero™ agenda?

>Larry, you are NOT USING YOUR DEGREE...and WE all know
>exactly what you are talking about...yourself.

Lennie:

What is the problem you and Kim have with my not "using" my degree? Did I miss some fine print in some equally invisible social contract that once I was bestowed my Bachelor of Science Degree in Human Resources Management that I absolutely *had* to take a position as an HR specialist? If so, how do you explain all the other people in the world that are not actively employed in fields directly related to their educational credentials? Flying an airliner is a highly technical task, but I'm sure you'll find a lot of airline pilots who do not hold degrees in Aeronautical Engineering. Most Executive Chefs are college graduates in a variety of majors, but their primary duties have little, if any, direct correlation to what they learned while pursuing their degrees. In every instance, however, the benefits of a higher education exceed the simple learning of purely technical, job-related, task-specific material. My quality of life is much higher for having had the exposure to the humanities, sciences, and arts while pursuing my degree. I chose my particular major mainly because it made the best use of transfer credits; I entered Wilmington College as a junior instead of a Freshman or Sophomore as a result. I also took several additional courses on a purely elective basis, simply because I wanted to take them. If and when I go for a graduate degree, it may not have anything to do with HR, or even business in general. Heck -- the easiest Ph.D for me to get would be in Education! I could probably knock off an MSED with as little as another year's worth of night school courses!

So, you're absolutely right -- I am not "using" my degree, in the sense that I'm not making my living working as an HR specialist. Now -- please tell me how this makes me an inferior person? I'm sure you will enjoy doing so!

That's correct. And neither have millions of other college graduates.
Do you have the same opinion of people with Ph.D's who are out there
driving trucks for a living? Or MBA's that fly airliners? Or people with
law degrees who serve as police officers? or nearly any concievable
type of college graduate who, for a variety of reasons, does not actually
work in a field related to their major course of study? I also have an
Associate Degree in Liberal Arts, Kim -- but Heaven knows that I'm
not any kind of artist, and I'm nothing even close to a Liberal! (For
everyone else but Kim, that was a joke!) So go ahead and "chide"
me for not having a job that "matches" my degree, Kim -- because
it's nothing more than you making a fool of yourself in your own
unique manner!

>a station after I get coordinated).

A peson with a Technician-class license can *use* a cross-band,
on the input frequency that falls within his license privileges. The
fact that it outputs on a band which exceeds his/her privileges does
not matter, since the operation of that repeater has to be under the
control of a higher class licensee authorized to transmit in that
region. However a Technician-class licensee could not be the
trustee of such a repeater, since the output would exceed his
privileges.

Ed:

As always, individual opinion will vary depending on individual experiences. When I hear of or see "NTI," I will always associate it with NCI. Perhaps my mistake was in not adding in a specifically-spelled out "IMHO" in my original post. However, I don't always do that, since ALL of my postings reflect my own personal opinion, in addition to simple facts.

>Okay. How did Dick Van Dyke figure into this for you?
>
>73,
>Ed Hare, W1RFI

Ed:

Very simply, he is a celebrity well known to me, whom I respect for his work in movies and television, and who made a PSA extolling the Amateur Radio Service. It is my understanding that he himself was an Extra-class ham, though I can't locate his name in the FCC data-base, most likely due to the fact that he is licensed under his "real" name, whatever that is. (I am not sure about the latter, I've been told that Dick Van Dyke is a stage name, but don't know how to verify this information.) That particular PSA always stayed in my mind, and made me think of amateur radio as a hobby which must be highly worthwhile, if a respected celebrity like Mr. Van Dyke was promoting it. I have no doubt that present-day ham celebrities could have the same impact on prospective amateurs.

I honestly believe that promotion of the ARS by well-known celebrity hams could go a long way toward attracting the kind of people we seek to become involved in this hobby/service. Most teen-agers these days have very little, if any, knowledge and understand of what ham radio is all about. Why not seek the assistance of the celebrities they know and admire to "sell" them on the concept of ham radio?

That is often because ARRL is willing to step up to the plate and do the work. In the case of power-line interference, ARRL has a cooperative agreement with the FCC that the League will try to resolve power-line cases directly with the power companies before asking the FCC to get involved. That has been about 60% effective so far. And if the Commission does have to get involved, the ground work has been done, and the letter to the utility CEO can be easily drafted.

Nothing strange about it at all, if you give it more than a cursory glance.

The name of the project is "THE ARRL Amateur Radio Education Project." When ARRL President Jim Haynie first started talking about this with the ARRL Board, the project didn't have a name. But by the scope of what it grew into, the Board started calling it "the Big Project" among themselves. When the formal name was adopted, the Big Project just wouldn't go away. It has a nice ring to it.

Larry:

The fact that the FCC has not done any enforcement against hams isn't a
proof of anything. FCC hasn't done near enough enforcement for many years,
and Riley & Co. have much bigger fish to fry.

However, I'm pretty sure that FCC has never had anything negative to say
about amateurs doing traffic reporting to each other.

Thus the heavy emphasis on "may".

Interesting concept. There are also the issues of less wasted fuel, less
pollution,
less congestion and increased safety brought about by drivers having traffic
information.
(All of these are good things).

>In fact, I've always believed it is a great failing
>of amateur radio that there isn't a widespread network of ham

>emphasis placed on public service in the ARS, I think we're missing
>out on a golden opportunity to serve in such a capacity.

Another interesting point.

I recall a time a few years ago when I was picking up a friend from the car
dealership where his
vehicle was being serviced. Normally we'd take the "Blue Route" (I-476) north,
but it appeared to be jammed
northbound when I was on it southbound on the way to dealership. Was it still
clogged? I got on the repeater
(either 147.195 or 147.36), joined the conversation in progress and asked. Sure
enough, there was a ham
stuck in traffic on that very road, and we avoided a lot of wasted time and
fuel by taking another route.

All of this was done courteously and with proper ID of all stations.

My passenger was very impressed by the whole exchange and the quality of
operating displayed by the folks
on the repeater.
>
>>>Ditto my last...but again, IF the conversation?QSO is only about traffic
>>>conditions, why is it legal for you and I to discuss, but not a trucker
>>>who might happen to be a ham? IF the subject itself is legal for

>directions,
>or report accidents. All of the above serve not only the interest of that
>particular driver, but the general public as well, since it is in the
>interest
>of
>the safe and efficient movement of traffic.

Ah - the tower folks benefit only themselves, while the truckers/drivers
benefit anyone willing
to listen. An important distinction.

>I am sure that if the FCC were
>required to specifically address this issue, that they would find it to be
>completely within the Basis and Purpose of the ARS.
>
Several years back, FCC issued some clarifications about various uses of
amateur radio that some
might consider "pecuniary", such as the classic "can I order a takeout pizza
via the autopatch?".

FCC said most of them were OK.

Anybody want to look up thoise rulings?

Kim not upgrading her ham license is like you not upgrading your college
degree, Larry. You can't have it both ways.

Encryption for the purpose of hiding something is prohibited. Encoding
is allowed if the code being used is published and is in the public
domain or if the encoding/decoding hardware/software is readily available.

The nocode tech population grew from 0% of the ARS in 1990
to about 30% of the ARS in 2000. It is foolish to attribute
only 4% of the change in growth to nocode techs. It is also
foolish to maintain that 4% value would not have gone negative
without the nocode techs. If the nocode techs had not
existed, where would the 30% growth have come from to
keep the change in growth from going negative?

No wonder people leave! The lifetime of a thread here is usually about five replies. After that, it tends to taken over by the "personalities" and then degenerates into an insult fest. If not that, it becomes a matter of picking at insignificant portions of a post to score some arcane "point". It ends up that the group is more about some person than about amateur policy.

Of course, a person is free to leave if they don't like it. Of course, that ends up leaving just the "mud wrestlers" in the group. Eventually, the group can become irrelevant.

Have you ever tried PSK31, Kim? Inasmuch as you are a regular
contributor here, I suspect you might like the mode. And that is a
pretty good reason to upgrade. 20 meter PSK is great fun, and you can
type around the world on a few watts.

There is of course, no rule that a person has to upgrade. But I have to
agree with Larry that doing it just to prove to yourself you can is a
fine motivation. That's a large reason why I moved beyond Technician.

Call it a friendly dare if you like!!!!! ;^)

Those licenses are no longer issued. (Current holders can continue to
renew.)

Tech+ holders some limited privileges on HF which are not available to
Technicians.

Advanced holders (without going into detail) have greater privileges
than General class, but less than Extra class.

With all kind wishes,

I actually think the FCC would permit the use of encryption
where the intention is to obscure information which is not
the content of the message. What I mean is, if one were to
send signed messages, where the signature is a hash digest of
the message (and thus is a derivative of the clear-text content)
that had been encrypted. In fact, I discussed this exact
topic with a relevant well-known FCC staffer and he alluded to
this conclusion.

I agree, so long as those traffic reports are on amateur frequencies.

If memory serves, Riley just recently shut somebody down who was
coordinating a network of amateurs gathering traffic reports and
airing the information on another medium.

Of course the violation was *not* that they were gathering the info
on the ham bands, but rather the commercial reporting of that
info on another radio service.

The Tech PLus itself is no longer issued but you can get the privleges
simply by passing the code test. It adds CW in four bands and phone at
28.3-28.5 200 watts.

Uhhhhhhh Dick, "malfeasance" is a legal term. It is impossible for ARRL
employees to commit malfeasance since they are not "public officials"
and therefore cannot violate the public trust. The ARRL is not sponsored
by the government. Nobody is forcing anyone to join or to remain a member.

>
>The nocode tech population grew from 0% of the ARS in 1990
>to about 30% of the ARS in 2000.

Yes, the percentage of US hams holding Technician licenses at the end of 2000 was about 30%. Nobody denies that.

An unknown number of them are/were codetested.

All US hams were codetested before February of 1991.

>It is foolish to attribute
>only 4% of the change in growth to nocode techs.

Nobody claims that. The change in growth between the 80s and the 90s was 4%. 4% of 4% is 0.16%.

>It is also
>foolish to maintain that 4% value would not have gone negative
>without the nocode techs.

Why? You do not know what would have happened if the FCC had not changed the rules in 1991.

>If the nocode techs had not
>existed, where would the 30% growth have come from to
>keep the change in growth from going negative?

The same place the 30% growth came from in the 1980s.

The facts are simple:

1) The ARS in the USA had growth before the 1991 dropping of the code test for a Tech license.

2) The ARS in the USA had growth after the 1991 dropping of the code test for a Tech license.

3) The growth in the 90s (34%) was 4% more than the growth in the 80s. (30%)

4) Some hams whose licenses say "Technician" are codetested.

5) Predictions of negative growth in the US ARS have all turned out to be false for at least the past 35 years - back to the early days of "incentive licensing"

Is any of the above not true? If not, why can't you accept the simple truth, Cecil?

You appear to keep making two mistakes, Cecil:

1) You assume that all Techs are not code tested

2) You assume that none, or very few, of the hams who got Tech licenses without a code test would have gotten a ham license if the code test had not been ropped for that license in 1991.

Neither of the above is true.

> contained.....

So long as the repeater operates within the rules, FCC has no interest in
the parameters, and they may be changed at will by the control operator.

I am trustee for 4 repeaters at two clubs. We have control signals for a
variety of parameters, i.e..,

Power level
Autopatch on/off/speed-dial only
AC power/DC power
CPU reset
Reverse patch on/off
ID mode
PL on/off
Links on/off
Voter priority
Announcements on/off
Announcement selection
Timeout timer length
Timer over-ride
Squelch level
Memory data burst dump
Courtesy tone/message selection
Transmitter disable

etc., etc.....

These control signals are numeric and password protected, with the meanings
known only to our designated control operators. The FCC has no knowledge of
the meaning of those codes.

With all kind wishes,

de Hans, K0HB

From: AC6V <ac6v@amsat.org>
Message-ID: <3CB48AFC.AADA48FA@amsat.org>
Source record: 40429

If you have Technician class license and you pass the 5WPM code test --
additional priviledges are:
CW priviliges on 80, 40, and 15 meter bands using CW, and on the
10 meter band using CW, voice, and digital modes.

80 meters -- 3.675-3.725 MHz: CW Only
40 meters-- 7.100-7.150 MHz: CW Only
15 Meters -- 21.100-21.200 MHz: CW Only
10 Meters -- 28.100-28.300 MHz: CW, RTTY/Data--Maximum power 200 watts PEP
10 Meters --- 28.300-28.500 MHz: CW, Phone--Maximum power 200 watts PEP

At all times, transmitter power must be the minimum necessary to carry out
the desired
communications. Unless otherwise noted, the maximum power output is 1500
watts
PEP. All classes are limited to 200 watts PEP in the 80, 40, and 15 meter
Novice/Technician Plus subbands.

These are right from the ARRL pages --- URL:
http://www.arrl.org/FandES/field/regulations/allocate.html#80

So if you take issue with the above -- argue with the ARRL. Many take issue
with sending CW on the so-called
28.300 to 28.500 "Phone Band" but it is perfectly legal although not
customary.

Huh? Are you denying that you claimed that? I can dig up that posting of yours if you want me to. If you are not attributing only 4% of the change in growth to nocode techs, then the change in growth would have surely been negative without the nocode techs, but you have already denied that possibility.

> >It is also
> >foolish to maintain that 4% value would not have gone negative
> >without the nocode techs.
>
> Why? You do not know what would have happened if the FCC had not changed the
> rules in 1991.

This is claiming essentially the same thing that you denied before. Let me say it again. The nocode tech population grew from zero percent to approximately 30% from 1990 to 2000. If the nocode tech license had not existed, the rate of growth (i.e. the second derivative of the population) of the ARS would have been negative. A second derivative of the population going negative is a red flag for people who track populations of endangered species indicating that the population is in trouble.

> >If the nocode techs had not
> >existed, where would the 30% growth have come from to

>
> The same place the 30% growth came from in the 1980s.

If 30% growth in coded hams had happened, the overall growth would have been 60%. In fact, it didn't happen at all.

> The facts are simple:

That's nice, but you are not discussing the issue. Why can't you accept the simple truth that the sun will rise tomorrow? See, I can do it too.

> You appear to keep making two mistakes, Cecil:
>
> 1) You assume that all Techs are not code tested

Nope, I'm not assuming that. "All" invariably means false. I am assuming that the large majority of nocode techs are not code tested. Do you have any proof

to the contrary? Does a small amount of uncertainty cause your brain to
cease functioning?

If you want, go back to your posted 1997 figures when nocode techs were NOT
code tested. 27% of hams were nocode techs. Didn't think of that, did you?

> 2) You assume that none, or very few, of the hams who got Tech licenses without
> a code test would have gotten a ham license if the code test had not been
> ropped for that license in 1991.

Again, "none" makes it false. I'm assuming that the majority of nocode techs
would not have gotten a license if the nocode tech license has not existed -
a perfectly reasonable assumption based on the set of hams whom I have elmered.
You assumption that all existing nocode techs would have gotten a coded ham
license is simply false. See, I can do it too. Why can't we just be reasonable?

You are making the same mistake as all the other PCTA folk. You are trying to
declare the effect of the nocode techs on the ARS as negligible. Won't work.

For instance, mountain top repeaters must be able to be shut down by the control operator so the code to shut a repeater down can be a secret. Otherwise, any Tom, Dick, or Harry could shut the repeater down. Normally, that control function is implemented over a UHF link. I'm not sure the FCC wants to know the parameters of the control code. I actually used a code on which I hold a patent for control of an Intel repeater.

Control of an automatic and/or auxillary station is a requirement of the rules.

Most repeaters are controlled via DTMF. The FCC (or anyone else) can easily decode these types of transmissions. As for data content, if the FCC were really worried, they could always inspect the repeater site, determine what type of controller was in use, and look up the control sequences (at least for the pre-programmed functions) in the appropriate manual. Certain other functions are self-evident (such as "say current time", bring up remote base interface, etc....). As a last resort, they would simply ask the repeater trustee to identify the nature and/or content of the control signal.

Many repeaters do somehow acknowledge the receipt of a control signal, either by performing an action or responding (CW or voice) with a phrase such as "OK" or "RR". In that context, it is obvious what is going on and the exact content of the message isn't material.

Which conclusion? 34 minus 30 is 4?

> The truth is that the population
> of the ARS went from 0% nocode techs in 1990 to 30% nocode techs in
> 2000.

Sure. Nobody denies that fact.

The context is what would/could/might have happened if the FCC had not
changed the rules. You and others claim the US ARS would have
encountered "negative growth" and other dire predictions, and deny
that reality that there is no
real way to know what would have happened.

> The great majority of the growth in the ARS for 1900-2000 was
> directly attributable to the nocode techs.

How do you know what would have happened without the 1991 rules
change?

> Denying that fact won't make it false.

Stating something with nothing to back it up doesn't make it true,
either.

Carl told me that when he used to operate CW, he got pretty close to 20 wpm. He still didn't like it.

Is the only real way to know what happens if you put your hand in the
fire is to actually put your hand in the fire? (Hope I didn't say
"negative growth". I think I said, "negative growth rate".)

Same way I know if I stick my hand in the fire, it's going to get
burned. It ain't rocket science, Jim. Virtually nothing is 100%
certain. A lot of things are indeed 90% probability. So let me
ask you: What is the probability that the 1990-2000 ARS growth
rate would have matched the 1980-1990 growth rate without the
addition of the nocode tech license?

There's a specific exception for repeater control,
but this is not the situation I described. Repeater
controls are indeed the information. I'm talking
about signatures to permit authentication of content.

I beg to disagree. Or to expand the definition of
"radio operating" to include having QSO's on air-
traffic-control frequencies, or on top of the 'CQD'
from the Titanic, or to other "extreme free-banding"
activities involving local law-enforcement agencies.
There's "good" recreational gambling and "bad"
compulsive gambling. And "good" radio operating
and "bad" (actually "very, very bad") radio operating.

>
> Scary, huh?

Not that scary. There are still powerful dis-
incentives to extensive outlaw HF operation --
costs, anti-antenna CC&R's, amateur self-
policing with FCC back-up, technical problems,
available time, boredom and general apathy, more
costs, lack of channelized 'sitting ducks", more
fun on the Internet posting JavaScript loops
and on and on and on.

> Actually, the history is somewhat different.
> Hams were legally authorized and limited to
> "200 meters and down"....

Yeah, my ham radio history is quite fuzzy. I
bow to your much more extensive knowledge on this.
However:

> And the ARRL had to fight all through the 1920s
> and into the 1930s on both the national and
> international fronts in order for amateurs to
> stay on the air.

> That fight continues today.

Indeed it does. I see it as part of that same old anti-freedom whine we've been getting out of the professional law-givers and good-work-doers since the Founding:

"Why do you need a powerful short-wave radio transmitter at your house???"

"Why do you need to bet on sports or cards???"

"Why do you need to drink alcohol or smoke dope??"

"Why do you need to keep pornography on your computer or in your dresser drawer???"

"Why do you need to drive a gas-guzzling SUV???"

"Why do you need to keep a firearm collection in your closet???"

"There ought to be a law!!!"

It seems to me that the most effective handling of
emergencies happens when there is no difference
between that handling and normal, everyday operations.
Having the procedures in place for handling vehicle
information moves the operation closer to that
ongoing state of readiness.

Precisely. And, as I've tried to say, I don't really care whether someone,
or others, wish to have such discussions on the air. I don't. For the
reasons that a) I believe it *has the potential* for abuse (and is abused in
my opnion) and, b) it just sounds crappy when all people can do to drum up
conversation about traffic, weather, and how sick they've been.

Yeah, and I think those examples are reasonable. Asking for directions to a hamfest, a friend's house, a hotel, a restaurant, whatever, doesn't seem to get near anything questionable...again, in my opinion. But, if you have just gotten hired by the hotel, restaurant, whatever and you are asking directions to the place (say it's a chain and you've never been to the location you'll be working at), then to me you are violating the rules. If you're going to your friend's house to conduct some work you'll be getting paid for...well, ya shouldn't be using ham radio to enhance your ability to earn that money by asking for directions over ham radio. Hamfests are another matter altogether. I *believe* the FCC has written opinion that selling radios/ham equipment is OK, as long as it's not your regular business. Heck, even cities allow a couple/few yardsales a year without having to charge sales tax.

>>purchasing agents and personnel-trained folks). I've done
>>my share of getting the interview buck passed to me to do
>>the potential-new-hire second interviews
>
> I think you meant that the buck was passed when it came to YOUR second
>interview.

No. I've not failed any interview. I've been the interviewer more often
than I've been interviewed.

To explain for other readers: It is common practice in the electronics
industry to have personnel departments do the initial screening of all
engineering applicants...then to have engineering staff members do
a detailed personal interview of those selected by personnel people.
That's the "second interview" mentioned previously.

Personnel departments cannot possibly be a judge of ALL technical
skills in a corporation. There are too many. Engineering staff can
do a better evaluation of an applicant insofar as knowledge and skills
for the particular tasks necessary in a corporate engineering group.
Staff are already familiar with work planning of the group and which
specialists or non-specialists are needed (they requested personnel
for specific job assignments to begin with). From experience they
already know which people can handle a task, which ones are the
most flexible and least flexible, which ones are the poseurs and
which ones can do a job.

"Testing" an applicant is usually subtle, few applicants aware that a
"test" is proceeding. Some sharper applicants (and those with some
experience) already know this and are psychologically prepared.
Answers in the usual give-and-take of an in-person interview must be
honest and direct, including specialties where the applicant has no
prior experience. Engineering staff interviewers can spot the fakers
a long ways off, the boasters coming equipped with a virtual neon
sign composed of banal generalities. Not a problem. Interviewers
know damn well that they will have to work with applicants that are
accepted and will judge all applicants on a myriad of interpersonal
qualities that go beyond technical skills.

There exist a few rare cases where some applicants are hired solely
on their credentials, more likely for having their "name in the papers

(trade papers)" and those are done mainly for having stock prices boosted or to acquire warm bodies for some future contract. When a contract is acquired, the corporation is obliged to perform or lose money. Credentials alone do NOT guarantee any success. Knowledge and experience and some ability to adapt to new conditions is far more important.

The one thing nice about electronics engineering is that everyone is obliged to meet electrons, fields and waves on their terms. All the credentials, boasts, titles, fakery and assorted bullshit used by some folk on other people just can't cut it. Never could.

Personnel people are fine to screen applicants, explain general requirements to applicants, tell about job benefits, and to handle post-interview processing of accepted applicants. If an engineering group's work task is, for example, to make low L-band equipment (900-1200 MHz) for telecommunications, they will know far better about the technical qualifications for that job than any personnel person who has to initially interview dozens of different trades and skills. Guitar amplifier designers probably won't make a second interview level (even if their surname is Fender), but some AM BC "engineer" might (but would probably not be accepted by the engineering staff interviewers). Those from a competing telecomm company would be welcomed with open arms on both levels. In between there are thousands of shades of grey which have to be examined in detail, each person unique.

It's generally not a "fun" thing to interrupt regular work to do some second-interview, but it is a break in the routine. In my experience the first ten minutes of conversation are enough to let me know whether or not the interviewee is worth spending another twenty minutes to get more detail. The interviewer must be civil, polite, and be able to communicate with other people...not everyone is suited to that task. Knowledge depth and flexibility-of-association of facts about certain specialties is important...an applicant may have skills and knowledge in specialties very close to what is required and that may be an advantage to the company in the near future. All of electronics is still constantly evolving, advancing, and a profit-making company has to keep up to date to continue making a profit.

There are continual periodic "tests" performed in the workplace every paycheck period. If you pass, you get one. If you fail, you get only one of them and a wave goodbye. That's not a credential to hang on a wall, but it makes it possible to have a wall (in a home) on which to hang other things.

1178. Re: ILLEGAL SALE OF HAM RADIOS?

>intersection as you can recall the radar test target at NADC...Or do you want
>your nose rubbed in THAT again?

I spent four months total in five trips to Naval Air Development Center in Warminster, PA, in 1971-1972, while working for RCA Corporation. Having a good memory, I can recall a lot of accurate details about NADC that was, many of the labs, both cafeterias, the centrifuge, the outside HF log-periodic antenna, revelie being loudspeakered well _after_ sunup, the road bisecting NADC main from the one-runway NAS adjacent, the assembly jig tracks in the first (factory) floor left over from the old Brewster Aircraft original owner, the C-117 that was the main aircraft for the SECANT test, the little S-2 and Douglas RA that were secondary on that flight testing, two Orions whose APU screamings were almost deafening if working within the C-117, the metal fitting room where the phototheaters were made, one of the two hangars where a couple of nights were spent resolving an antenna problem with the RA, the NAS Ops room and flight briefing room (upstairs), how the aircraft parking area was below the level of the runway, the three different entrances to NADC main, the photo lab where the flight camera film was processed and where the NADC engineering group got the single-frame projectors to study the flight instrument images, the CDC computer room which would later process the flight tapes of the second-go-around of SECANT and Minne-Honey collision avoidance system testing, Mike Raditz, Jim Hinds, and Oscar Shames of NADC, the flight crew equipment room at the NAS that had helmets, masks, one-piece flight suit coveralls, etc., the "Yellow Bread Truck" that was a ground vehicle with a built-in AN/ARC-27 and a generator for comm, the flights to PAX River for theodolite-range flight path confirmation and Key West deployment to get out of the Philly area air traffic, the "sports car" feel of the S-2 sitting in either of the forward seats and being able to look straight down through the side bubble window. Oh, yes, and "Street Road" which was the name of the highway immediately adjacent to NADC that started that old exchange, mentioned by me just because it was a funny name for a highway.

NADC was dissolved some time later, some projects and tasks dropped altogether, most transferred to Naval Air Systems Command. Whatever became of the Warminster NAS or the old NADC buildings is not important to me personally since I never went back there again, not the nearby Willow Grove NAS, nor the Warrington Inn that was a place to sleep for three months. The testing effort of SECANT was successful, the system worked, the R&D project generating over a dozen patents assigned to RCA Corporation, one of mine being one of those.

What STEVIE has to supply is the year where he "visited the HRO" outlet I described in Burbank, CA. This will let everyone know whether he is or isn't telling an untruth. While the HRO stores share a somewhat common arrangement across the country, they are all somewhat independent and unique. There are apparent differences in geographic locations which should be easily recalled.

> And I asked you WHY you'd have such an interest?

If you want to grill someone you have to get a fire marshall's permit and show your FDA badge. Even so, a blue-uniform with a BPD or LAPD badge will show up. :-)

>You have no license to
>operate any of that equipment except to passively receive, and have voiced a
>steadfast intent to REMAIN a loser...I mean unlicensed...

Wrong again, STEVIE. I have no problem legally transmitting on several EM bands according to the FCC. HRO sells two manufacturer's civil aviation comm band transceivers (hand-helds from Alinco and Icom). While I have no reason to get one of those, both the FCC and FAA will allow me to use such to transmit according to their regulations. No further testing required.

Without looking it up in the Fall 2001 HRO catalog, I think HRO quit retailing CB sets. There's all kinds of competition in those from Target, K-Mart, Sears, Fry's, and Wal-Mart.

What I am actively pursuing right now is noneyerdambusiness.

You have to figure out WHY I was interested in comparing LCDs of many OEM suppliers in incident daylight. You won't get an answer with your line of grilling. You aren't law enforcement, you aren't even for lawn order.

> YOU are asked a specific question about RADIOS, a topic of which you
>claim some initmate knowledge, and all YOU can provide is "vague generalities".

Yaesu, Kenwood, Icom, and Alinco radios ALL have LCDs on their front panels. Half of one whole wall in the Burbank HRO has stacks of them on shelving, connected, turned on. (it's on the west wall of that store). All of those LCDs appear to be of different manufacture.

Some within one manufacturer's line appear to be from different
sub-contractors. It's a good way to compare different LCDs.

> SAME two-faced BS as always, I see.

No. I explained what I was doing in detail. My first task on visiting
that HRO was to check content of periodicals. That store is
convenient since those periodicals aren't viewable unless I visit a
Barnes and Noble (approx. four miles further) or a Border's (ten
miles further). Neither Fry's nor Electronic City carries ham
periodicals.

No one questioned my presence in the HRO. It is a store like all
the others nearby.

> Like forcing your opinion on a USENET group involved in the pursuit of
>an "avocation" in which you have NO initmate concern?

Follow the link provided by Hans Brakob to have your very own
gold-anodized Radio Kop badge. You can flash it to your computer
screen next time you write one of those messages. :-)

>>I'm not the one suffering delusions nor engaged in obsessive-
>>compulsive activities.
>
> Neither am I.

Sure you are. You aren't aware of how obsessive your activity has
become. You have a bad case of it. QED.

>>Unclench the fist or break the jar. Your choice.
>
> Neither. I stay in your face as long as you misrepresent the truth and
>denigrate Amateur Radio. Unless you rather I berak it over your head?

;-) What I find interesting in compulsive-obsessive rage-induced
behavior is the high S:N ratio on motor control neurons. Those
invariably result in typos such as "berak" above or the often-done
typos of "amatuer."

In article <a91hp641lff@enews1.newsguy.com>, "KC8PMX"
<kc8pmx@NOSPAMdiamondcs.net> writes:

>Guess I thinking of the time old tactic of "If I had to do it, so does
>everyone else" mantra cheered on ever so often.... Using the statement from
>some here, "Anyone can learn the 5 wpm code" then anyone should not have too
>much problem with it.

The "anyone can learn the 5 WPM code" phrase is side-stepping
the issue, a way to "answer" something without answering it.

The No-Code-Test Advocates are simply questioning the need to
have any code test at all.

Since the code test has never been eliminated in amateur radio
testing for HF privileges, and that amateur radio is a personal
activity, the "I had to do it so you have to also" is more than a
mantra. It is a Way Of Existance in testing. It must be kept for
a variety of reasons -

Some who passed a code test had to put forth considerable
effort in order to pass. Having done so, they could "recall"
passing it with "ease" although it must have been difficult for
them...just like everyone claims to have "aced" written tests.
:-)

Some were military service trained in morse code. Those were
preselected for that aptitude. If they graduated military morse
training they could already do 20+ WPM and had sufficient
skill and experience to easily pass amateur radio morse tests.

Most of the morse-successful seemed to have learned morse
while still teen-agers. That is a time when the mind is still a
dry sponge ready to absorb anything. It is also a time when
they won't necessarily recall their trials and efforts in learning.
Those probably were "guided" by parents or close family
members; normal eagerness to please family is a stronger
motivation than the impersonal environment of enforced learning
in a classroom of strange beepers.

Some relish the virtual reality of a radio of Long Ago, a time now
long in the past, of pioneering when radio was "new" and
exciting. That was certainly a simpler time in technology, less
flexible, more rigid, and intellectual demands were very low.
Since on-off keying was the ONLY communications mode in
radio of long ago, code was king. Then.

Some need the "military" type of environment where "others in authority" make all the decisions and they simply follow those orders. There's emotional security there. They can be "proud" of their "service" and following orders. They can even "rise in rank" to act like dill sergeants (disapproving pursed lips types who run lesser ranks through centuries-old close order drill and demand discipline and order).

Those that Made It seem to take great delight in putting down those who did not or those who didn't care to do it or those who don't see any sense in doing it. It's a taunting, immature "I'm better than you are" behavior. That's human nature, but it's not an attractive part of humankind.

Incorrect. This was a research project carried out by a group of universities.

>>My mother was then in a nursing home, a victim of too many TIAs.
>
> You bandy-about medical terms as loosely as you do your "knowledge" of
>the purpose of various radio services.

TIA = Transient Ischemic Attack, also known as a "micro-stroke."

There are various kinds of such "attacks," all caused by hemorrhages of blood vessels in the brain. Some are momentary, some have effects lasting several days. A general condition is that several of them over a year or two will lead to debilitation. Anyone with a close relative suffering those will find such things out. Anyone with a close relative undergoing such will know that is NOT a good thing. Doctors will explain all the details to patients' family members. Not a good way to get an education in that particular subject.

I KNOW various radio services because I been IN them, have had both self-teaching and formal education in them as well as on-the-job training. Anyone can do that if they apply themselves...and live long enough.

> On the OTHER hand, YOU purport to be a professioanl in
>radiocommunications
>matters, yet can't tell me what FCC regulation specifically creates radio
>services for "strictly recreational" purposes, despite having made the
>assertion that such exisits.

Wrong again. I've explained it all in public.

A professional accepts a fee, monetary compensation, for services rendered. That is the definition of "professional." I am a professional in radio-electronics. I'm also a hobbyist in radio-electronics.

The regulations for US amateur radio specifically state that it is a personal radio activity without pecuniary interest (no monetary compensation), therefore it is "amateur." In that case the FCC has, for a long time, "explained" the difference between amateur and professional. It is codified, it is law.

There are a great number of different radio services in the USA, all civil radio services regulated by the FCC. There are so many that a full bound set of Title 47 CFR is five soft-cover volumes and cost a bit over $120 from the Government Printing Office. (check with USGPO for current price, branch bookstores in all major urban areas, free shipping of USGPO orders)

Except for IVDS, Part 95 personal radio services were created for personal recreational use. The language of the regulations was so worded that professionals could ALSO use radios regulated under Part 95. CB is one of those, the old "Class D" created in 1959. Radio-control or "R/C" is the old "Class C" CB which still retains the old 27 MHz band frequencies and had the many 72 MHz channels added to please modelers, both contest flyers and the occasional "park flyer." While there are no exact details, there are at least a quarter million such R/C users in the USA, all able to use rather exclusive frequencies for recreational pursuits without any license whatsoever.

While there are professional R/C users (I know of two of them here in the center of movie land) those are distinct rare cases. All those extra, exclusive 72 MHz channels were lobbied for by recreational users and user groups. The FCC worded the regulations so as not to discriminate between recreation and occupation or amateur and professional. No license is required.

The FRS or Family Radio Service was created to give individuals a short-range communications radio capability that includes some measure of privacy. Again, the language of the regulations does not discriminate between recreation and occupation nor amateur and professional. No license is required.

FRS transceivers on the market range from as low as $30 the pair to $80 for a single unit. No doubt some professionals use FRS transceivers for very low-cost operations, but Part 90, the HUGE 350+ page Private Land Mobile Radio Services section has the following radio services for professionals in: Power, Petroleum, Forest Products, Film and Video Production, Relay Press, Special Industrial, Business, Manufacturers, Telephone Maintenance, Motor Carrier, Railroad, and Taxicab. All of those frequency assignments are done by industry organizations for minimum interference. All those professional groups have the advantage of PLMRS for greater flexibility and range in radio use.

Part 95 is specifically named PERSONAL Radio Services. Four out of the five radio services in there were specifically created for recreational radio use. To argue anything else is

a stupid exercise akin to picking fly shit out of pepper.

>> I can't find NSI anyplace on the Web. It must have failed.
>
> Try looking in the same place that "Ham Radio" keeps' it's website,
>Lennie. It failed too.

Actually, no. HR was SOLD to CQ Communications, Inc, along with the Bookstore. CQ still has the first-rights in copyright, also obtained in the sale. The Bookstore of HR merged with CQ's own bookstore. Parts of HR were incorporated into Communications Quarterly. CQ publishes the complete 22-year content of HR on three CD-ROMs, available from them directly or through the ARRL (shipping extra from ARRL) for only $150.

NSI and KCI are no longer. Period. They did NOTHING. NSI was simply an outlet for sarcasm and bigotry of an individual and his cronies. NSI didn't last 3 years, let alone 22 years, had no technical content. KCI was a small special-interest group for lobbying the continued existance of the code test; it was dissolved in 1999 after a very short existance.

>
>What is the problem you and Kim have with my not "using" my degree?

You can't have it both ways. You can't talk down "nickel extras"
or charge "dumbing-down" and still try to elevate yourself as
somehow "superior" in radio with a terrific amount of self-centered
braggadoccio. You don' got no technical smarts, Larrah.

>Did I miss some fine print in some equally invisible social contract that
>once I was bestowed my Bachelor of Science Degree in Human
>Resources Management that I absolutely *had* to take a position as
>an HR specialist?

You've missed the "fine print" in interpersonal behavior.

Back when you were soma come loud you were making a lot
of rude noises on how "good" you were and how you were always
good (teaching your officers how to do their thing, etc.) and all
those high-paying management jobs you were going to get.

You wound up DRIVING A BUS. Geez, Larrah, that's something
a "woman of color" can do...and they do by the hundreds, perhaps
thousands. I see them regularly.

Do you have an AA degree or a BS degree? Is either one from
an accredited educational organization?

>If so, how do you explain all the other people in
>the world that are not actively employed in fields directly related to
>their educational credentials?

If they are like you, Larrah, they have lots of BS credentials.
The difference is that the acronym does NOT mean "bachelor of
science."

>Flying an airliner is a highly technical
>task, but I'm sure you'll find a lot of airline pilots who do not hold
>degrees in Aeronautical Engineering.

Noooo, Larrah, flying, even in a complicated commercial air carrier,
is a SKILL acquired after long practice and already possessing the
aptitude and physical attributes necessary for flying.

DESIGNING a commercial air carrier requires knowledge and skill
of highly technical intellectual matters with basic engineering best
obtained through an accredited educational institution leading to a
degree.

>Most Executive Chefs are
>college graduates in a variety of majors, but their primary duties have
>little, if any, direct correlation to what they learned while pursuing
>their degrees.

Oh, my, I will forward your comment to Emeril and the Naked Chef,
maybe the execs of the Food Channel.

I'll congratulate the Master Chef at the next Taco Bell for not
correlating what they've learned while pursuing their degrees.

>In every instance, however, the benefits of a higher
>education exceed the simple learning of purely technical, job-related,
>task-specific material.

Beautiful boilerplate pasties you made there, master chef!

>wanted to take them. If and when I go for a graduate degree, it may
>not have anything to do with HR, or even business in general. Heck --
>the easiest Ph.D for me to get would be in Education! I could
>probably knock off an MSED with as little as another year's worth of
>night school courses!

Yawn...here come da Soma Come Loud stuff again.

>So, you're absolutely right -- I am not "using" my degree, in the
>sense that I'm not making my living working as an HR specialist.

Cut the BS on fancy names. "HR" as in Human Resources is still
PERSONNEL. "Paratransit operators" are BUS DRIVERS.

Not a damn thing wrong with using the conventional titles. Everybody
knows what they do, are whether they have fancy titles or not.

>Now -- please tell me how this makes me an inferior person?

"HR" in this newsgroup is Ham Radio.

You keep demanding that others "be as good as you" in all the
BS about "applying yourself" and showing "dedication and
motive" and such. You've bragged all over this newsgroup on
how "good" you are, "qualified" and all that...and wind up
DRIVING A BUS.

>I'm sure you will enjoy doing so!

I really don't...but some inflated egoes have grown so large that
the needle to puncture them is simply irresistable.

Now, WHAT HAVE YOU LEARNED ABOUT RADIO in all the time
you've been hitting on all those "dumbed down" no-code types?
Apply yourself. Lots of stores have crazy glue.

Well, thanks Ryan. However, I really gotta tell you that it isn't all that difficult and there's loads more hams doing a whole helluva lot more than I. For instance, it seems to me I've heard of many hams who traveled to NYC and will travel to most other major emergencies, to help out. I would, but I can't. That's just one example.

Here's another thing...LOL I have been a volunteering pretty much since I was a teen-ager: was a Girl Scout Counselor, then Girl Scout Leader, always did camp, in my stupider days (heh heh) I was a member of the TARS (Teen Age Republicans) and did a lot with them, etc., etc. Worked some soup kitchens, worked on the streets with homeless, have often thought about but never did Meals-on-Wheels, then got involved with ham radio and it's just served as an adjunct to what I like to do.

HOWEVER...in all capital letters...here a while back I realized that every single moment of my free time was spent on volunteering. WHEW...I mean every moment! And, I was even making extra time (staying up late, to travel, etc.) to do this stuff. I says to meself, "Self, what the Hell are you doing?" and pretty much brought it *all* to a screeching halt. Plus, I've really had to devote some more time to work.

So, the minute you stop or take a moment to realize what you're doing...it puts a lid on it...LOL However, I'll be back out there again. About the middle/end of Summer I'll get back into mentoring the ARECC.

>

What a huge, huge waste of ham radio. There are broadcast stations all over
the place, with helicopters, motorists who call in on cellular phones, etc.,
to do the job you describe above. Ham radio is more aptly used to report
directly to the police items such as accidents, and even to assist motorists
with getting roadside help. But, to have hams as a major contributor to
traffic reporting is just not good use of spectrum.

>
> Considering the great
> emphasis placed on public service in the ARS, I think we're missing
> out on a golden opportunity to serve in such a capacity.

The emphasis on public service in ham radio is specifically to fill a void
for our public service agencies and volunteer groups--*NOT* to provide
competition for already-in-use commercial ventures of broadcast radio
stations!

>
> Exactly, but this example doesn't relate too well to the issue of

The magic word you said above is "professional." If you are using ham radio in any way to enhance your ability to make money, then I believe you could be called into question on the rules. As I said, have at it...but I won't be involved in the discussions, nor will I answer those questions if I feel you're asking for those reasons...

Well, c'mon!! It was Jim's baby from the start, and his callsign is W5JBP. Hence "Jim's Big Project." I think it's got a nice ring as well. Gosh, I am trying to remember the school down here...the kids are on the air all the time and it's great! A result of the Big Project and we need lots more of it. This is one of Jim's greatest pushes, I think...and I don't particularly agree with Jim most of the time. But, on this he's done an excellent job.

Hi Mike:

No, I've never used PSK31. My husband started using it some time ago...and I laughed because it reminded me of being in a chat room--Heaven forbid! I am pretty much a FM person, mostly for the local stuff and don't even really get on the air much any more. I go through stages like that.

I empathize with your "proving it to myself" theory, though I don't feel I have anything to prove to myself, or anyone else for that matter. I've got the 10M rig in the truck (as soon as I work on radio installations some more) and have fun about twice a year with that. It's enough...

A huge "however" here, though: if you ever intend to upgrade to General
after passing your 5wpm test, you *must* do it within one year of passing
the CW test or you must do it all over again.

Message-ID: <JJ5t8.6713$3P4.535699@newsread2.prod.itd.earthlink.net>
Source record: 40512

courtesy AF2C

Some Q signals have never made it to the ARRL's official
list. Here are some that many agree would be useful in
appropriate situations. As with regular Q signals, each
can be a statement or a question, depending on whether
a question mark follows it.

QBA - My antenna is BIG!
QBA? - How big is your antenna?

QBO - Don't sit next to that guy in the meeting.
QBO? - Buddy, can you spare some soap?

QBS - It's getting deep in here.
QBS? - Did I tell you about the one that got away?

QCP - I am using Cat Power(From Rotary Cat Power Wheel)
QCP? - Are you using Cat Power?

QCW - I am going to whistle Morse Code on FM (or SSB)
QCW? - Why are you whistling Morse?

QDR - Damn Right the frequency is busy! (In response to QRL)
QDR? - Do you have a Receiver? (In response to QRL)

QET - Phone home.
QET? - Has anyone called me from another planet?

QFH - This frequency is MINE! - go elsewhere.
QFH? - Is this frequency hogged?

QHI - I am jumping in quick to say hi, then going QRT.
QHI? - Are you leaving after only one transmission?

QLF - I am sending with my left foot.
QLF? - Are you sending with your left foot?

QOK - Your last transmission was Okie Dokie.
QOK? - Was my last transmission OK?

QPM - Your signal is purr modulated.
QPM? - Is my signal purr modulated?

QRC - Warning, rag chewer on frequency.
QRC? - Are you a rag chewer?

QWC? - Who cares?
QWC - I don't care

```
QZZ - I fell asleep at the mike.
QZZ? - Is that a 60Hz hum, or are you snoring?
```

Yep, the sky is still falling after 12 years. I wonder when its going to
crash?

Not so much a hatred for their hobby as much as an unreconcilable loss of stature. The only way to save face is to destroy it.

Obviously! Thanks for providing the voice of reason.

The exam today is more difficult than anything you took back in '06.

You're saying that operating an amplifier at 14.300 is substantially
different than operating an amplifier at 14.160 Mhz?

Is this "new math" or something?

The
> Extra class was not available to anyone who had not held a general or

Are you saying that receiving Morse Code coming across a battery operated
tape player is like operating an amateur radio station?

Good grief

Ryan, nope. When you see that GQ in front of the White House telling you what they are supposed to be saying inside, how do you think that image and audio gets from 1600 PA avenue to the TV station? Everyone get a test.

Kim, its possible that he'll come up with a revolutionary new method of learning code so that it truly can be learned by everybody. He'll call it "Code Sudden" and three tapes will take you from 0 to 60WPM.

Then the code copying exam will truly go away (as did the code sending exam) because "everyone passes it."

Brian

So true....But just think how much more confidence you can have that the message will actually arrive at its destination (and consider the fact that you will know it instantly since the recipient will immediately acknowledge it) when you use radio's most basic mode- Radiotelegraphy!
And you won't have to worry about contracting histoplasmosis from those smelly, nasty birds.....

Gung Ho!

Ryan,

I am equally sick of people who make "generic" statements of
complaint and fail to offer even a minimun list of items that
constitute ARRL actions or inactions that reflect ARRL
ignoring the wishes of it's paying members.

Perhaps YOU can offer such examples since Dick, Larry
and Val haven't taken a shot at all.

Cheers,
Bill K2UNK

No problem....to each his own.

> However, I believe all radio
> amateurs should be familiar with our simplest, most practical,
> effective, efficient, and universal mode of communication -- Morse/CW.

No problem in principle. The difference is in what you believe
constitutes "an amateur being familiar with ....." It is quite
easy to be familiar with CW as a mode and NOT know how
to code/decode morse characters at any minimum speed.
Of that, I am sure, Larry will disagree as I am sure Larry
will state that "an amateur being familiar with CW...."
requires some minimum code speed knowledge.

> Like most people that don't "like" CW, I believe what Carl really
> doesn't like about it is the effort required to achieve a useful level
> of proficiency at it.

Even if true, it is of no value or impact as to the justification
of a morse test requirement. "Effort" at learning anything
is NOT a goal of amateur Part 97 FCC rules.

> Operating a PTT switch is, after all, much easier,
> and provides a higher level of instant gratification. That seems to be
> a common factor among those who have whined the loudest about

Kim,
That is...in my not so humble opinion, a crock. I totally
disagree with you and I'd suggest that IF it ever came up
with the FCC, they (FCC) wouldn't have a problem with it either.

> > Are you saying that if hams help

Again, I totally disagree...and so does the majority of
repeater users. I have NEVER been turned down by anyone
when I have asked for traffic help or directions.

Just HOW do you or anyone else KNOW why I want to get to
a particular location. If I said I'm going to pick up a friend
would you give me directions? If I added that we are on our way
to work and I'm giving the friend a ride would you NOT give
me directions?

Was the "guy" a ham? If not, what was the violation
if all the "guy" did was listen to a repeater conversation
and report what he heard?

Here's an excerpt --

"The FCC wrote Tech Plus licensee Joseph E. Mattern, WW4WJD, on August 22, 2000, citing Commission evidence alleging that the licensee had been using amateur repeaters in his area to solicit traffic reports for his employer, a company that markets the reports. "Such use of an amateur station would be a violation of ?97.113(a) of the Commission's rules," FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth wrote."

If you can find any of your famous "grey area" in the above, then have your proctologist give you an eye exam.

With all kind wishes,

de Hans, K0HB

No way he could be in violation by listening only. It's the same principle as owning a transmitter while not transmitting on it when unlicensed is not a violation.

Well, I suppose we could create some emergencies so that our practice
is just like the real thing. OTOH, I suspect the FCC wouldn't back us
up on claims that it was necessary to Teflon-coat I-35 so we could get
realistic practice for a multi-car pileup.

Because of that, we go through the routine as often as possible, so
that it becomes a habit, and so that it will stay a routine when all
hell breaks loose around it.

Such embarrassing questions! The answer is "They are *supposed* to
have". But
evidently you missed the news a couple years ago where some large ships
were on night combat training mission under blackout and radio silence
conditions using Morse code with signal lights when something went
seriously awry.
Evidently a no-coder was assigned watch duty on one of the ships
because he totally missed a message from the ship ahead of his which
said "We are in the process of backing up, stand clear" or something to
that effect. The result of his malfeasance (yes, Cecil, it's a good
word) was that his ship continued in forward mode and struck the backing
ship creating a big repair bill for the taxpayers of some $1 million
plus. Neato.

If I'm on the clock while driving, it best serves my pecuniary interest to have a legitimate excuse to rack up overtime getting across town. If the paid drive takes three hours each way, then I only have to do two hours of actual work that day. When I want traffic information in the middle of the day, it's so I don't waste my entire lunch break sitting on a backed-up freeway. When I want it at the end of the day, it's because I have better things to do with my personal time.

No, their job is to maybe, possibly, kind of report that there's a
road somewhere with a car on it. Anything more would cut into the
airtime reserved for the sponsors and the latest gossip report.

Besides which, too many of them space their traffic reports out too
widely; one at 5PM, which is useless unless you turn on your Walkman
before you even get up from your desk, and one at 5:20, after you're
already sitting in the backup.

K5DES, though that call doesn't get used too often, since most of the
kids in the class who really want to talk have their own licenses
pretty quickly. It has a side benefit in that the DARC has been able
to use the school's facilities for classes and meetings as well.

Yes. His call began with "WW4".

He was actively soliciting the information for rebroadcast by his employer, not
just listening. The enforcement reports (there was followup in later
enforcement letters) make it clear (to me, anyway) that the violation was in
the use of amateur radio to gather info specifically for commercial
rebroadcast, not for the traffic reports themselves.

Take a look and tell us what you think.

>On this I agree 100% with Kim. I just sent in an additional
>donation to <the Big Project> today.

About a year ago, the ARRL Lab guys brought a truckload of fine junque to the Hudson Division Convention flea market. Jim Haynie was there. When he conducted the ARRL Forum, I decided to have some fun. Right in the middle of his spiel about the Big Project, I inturrupted him because I had to get back to the table. I let him know that the Lab guys had decided to donate 100% of the proceeds of the junque sale to the Big Project. He didn't mind the inturruption. :-)

At the end of the day, we had raised about $750.00.

Of course, the next time we did another junque sale, we donated the money to the Lab test-equipment fund. :-)

>Huh? Are you denying that you claimed that?

The growth in the '80s (all hams codetested) was 30%
The growth in the '90s (most but not all hams codetested) was 34%.
The change in growth was 4%. (34-30=4)

All of the above is true and has been posted by me several times.

4% of 4% is 0.16%. So 4% of the change in growth is 0.16%

>I can dig up that posting
>of yours if you want me to.

Go ahead - show a post where I claim that the tech license resulted in only a
0.16% change in growth.

But be sure to quote the whole post so as not to obscure the context.

>If you are not attributing only 4% of
>the change in growth to nocode techs, then the change in growth would
>have surely been negative without the nocode techs, but you have
>already denied that possibility.

>This is claiming essentially the same thing that you denied before.

Nope.

> Let
>me say it again. The nocode tech population grew from zero percent to

>approximately 30% from 1990 to 2000.

That's right. Nobody knows how many of those hams (they ARE "real" hams, btw) would have been licensed if the FCC had left the rules alone in 1991.

>If the nocode tech license had not
>existed, the rate of growth (i.e. the second derivative of the population)
>of the ARS would have been negative.

"Rate of growth" is the first derivative of the population. In plain English, anyway. You do not get to reset the boundary conditions after the statements are made.

>A second derivative of the population
>going negative is a red flag for people who track populations of endangered
>species indicating that the population is in trouble.

Nice try but no cookie.
>
>> >If the nocode techs had not
>> >existed, where would the 30% growth have come from to
>> >keep the change in growth from going negative?

Note the use of the word "growth".
>>
>> The same place the 30% growth came from in the 1980s.
>
>If 30% growth in coded hams had happened, the overall growth would have
>been 60%. In fact, it didn't happen at all.

In the '80s, all growth in US ham radio was due to their being more codetested hams because all hams were codetested. That changed in 1991 because a new option was offered, changing the boundary conditions.
>
>> The facts are simple:
>
>That's nice, but you are not discussing the issue.

You are avoiding the issue by avoiding the facts. Why are you afraid of the facts?

>Why can't you accept the

The sun will probably rise tomorrow.

>> You appear to keep making two mistakes, Cecil:
>>
>> 1) You assume that all Techs are not code tested
>
>Nope, I'm not assuming that.

Yes, you are. Denial makes three mistakes.

>"All" invariably means false.

Not true. All US hams have licenses issued by the FCC Is that not true?

>I am assuming that
>the large majority of nocode techs are not code tested.

There is no such thing as a "nocode tech" to the FCC or the various license databases. There are "Technicians" and "Technician Pluses" - but some Technicians have passed code tests and others have not.

> Do you have any proof
>to the contrary?

I have posted it several times.

>If you want, go back to your posted 1997 figures when nocode techs were NOT
>code tested.

That is not true.

>27% of hams were nocode techs. Didn't think of that, did you?

Actually, I did.

There is no such thing as a "nocode tech" to the FCC or the various license databases. There are "Technicians" and "Technician Pluses" - but some Technicians have passed code tests and others have not.

The FCC did not immediately create the Tech Plus class in 1991. They dropped the code test but listed both codetested and noncodetested Techs as "Technicians". They left it up to the individual licensee and the VECs to keep track of who was code tested and who wasn't.

FCC did not begin to separate Techs from Tech Pluses until mid-1994. Even after the change, some code-tested Techs who renewed got licenses that said "Technician", not "Technician Plus".
>
>> 2) You assume that none, or very few, of the hams who got Tech licenses
>without
>> a code test would have gotten a ham license if the code test had not been
>> ropped for that license in 1991.
>
>Again, "none" makes it false. I'm assuming that the majority of nocode techs
>would not have gotten a license if the nocode tech license has not existed -
>a perfectly reasonable assumption based on the set of hams whom I have
>elmered.

Not a reasonable assumption for the set of all hams, though. And not a reasonable assumption of what would have happened without the rules change.

>You assumption that all existing nocode techs would have gotten a coded ham
>license is simply false.

I have not assumed that at all.

>Why can't we just be reasonable?

In this case, you equate "being reasonable" with "agree with Cecil without proof".
You gotta do better than that.
>
>You are making the same mistake as all the other PCTA folk.

You're mistaken, Cecil.

>You are trying to
>declare the effect of the nocode techs on the ARS as negligible.

Where am I doing that? I'm simply pointing out basic facts. 30% growth in ten years with all hams code tested, 34% with some hams not codetested. Where do I say any ham's effect is negligible?

GREAT IDEA, Joe!

Perhaps NOVA could do an episode on ham radio. A version of "Antiques Roadshow"
could visit various radio museums and 'fests like the AWA.

Nope, growth is the first derivative of the population, i.e. the slope of the
population curve. Rate of growth is the second derivative. You do not get to
redefine commonly accepted mathematical principles.

"...group of universities."...??? I provide specifics and you claim it's incorrect and substitue a generalitiy. Uh huh...we believe you, Your Putziness.

>TIA = Transient Ischemic Attack, also known as a "micro-stroke."

NOT known as a "micro-stroke". Wrong again...Break open a medical terminology text, Your Clammyness.

>There are various kinds of such "attacks," all caused by hemorrhages
>of blood vessels in the brain.

NOT "all caused by hemmorhages of blood vessles of the brain" , Lennie. Again you offer absolutes that are NOT substantiated by facts.

>Doctors will explain all the details to patients' family members.

Either the one who did the explaning to you did a poor job, or you weren't paying attention.

I weigh in on YOUR not paying attention. This is then compounded by your getting in here and crowing about that of which you are obviously unprepared and foolishly ignorant.

>I KNOW various radio services because I been IN them, have had
>both self-teaching and formal education in them as well as on-
>the-job training. Anyone can do that if they apply themselves...and
>live long enough.

Then PLEASE tell us which one is the one that is "strictly recreational", Lennie.

The TWO radio services you have NOT been in are the Amateur and the one you claim is purely recreational...bcause if you HAD been in such a service, you'd KNOW better than to make the ignorant statements you've made here.

>> On the OTHER hand, YOU purport to be a professioanl in
>>radiocommunications
>>matters, yet can't tell me what FCC regulation specifically creates radio
>>services for "strictly recreational" purposes, despite having made the
>>assertion that such exisits.
>
>Wrong again. I've explained it all in public.

You've explained NOTHING. You've treid to RATIONALIZE your excuses for
getting caught with your pants down.

Lennie...WHICH RADIO SERVICE IS "STRICTLY RECREATIONAL"...??? You have
NOT explained WHICH radio service is "strictly recreational"...

>The regulations for US amateur radio specifically state that it is a
>personal radio activity without pecuniary interest (no monetary
>compensation), therefore it is "amateur." In that case the FCC has,
>for a long time, "explained" the difference between amateur and
>professional. It is codified, it is law.

Lennie, CITE THE PARAGRAPH in FCC rules and regulations, In Part 97, 95,
or any other, that states that Amateur Radio or ANY OTHER radio service is
STRICTLY RECREATIONAL.

YOU stated that such a service exisits. However, to date, you cannot cite
such a service by rule or regulation.

>Except for IVDS, Part 95 personal radio services were created for
>personal recreational use.

No they were not.

> The language of the regulations was
>so worded that professionals could ALSO use radios regulated
>under Part 95.

Sheesh, Lennie...Are you a COMPLETE idiot, or is it a transient situation?
CB was created for BOTH "personal" use AND for small businesses that could not
afford the "commercial" equipment of other serices.

This is documented in more than one historical test of the era, most
prolifically by Tom Kneitel of CB-genre periodicals. Still is...

And at NO TIME was CB >>EVER<< intended as a "recreational" radio service.
Until the FCC finally threw it's hands up and "washed them " of the nightmare
IT created, they had spent a great deal of effort trying to enforce the rules
that SPECIFICALLY prohibited "chit chat" or "hobby-like" communications.

They have once again reinforced that concept by refusing to drop the 150
mile limit on CB communications and refused to implement Amateur-like rules for
CB sideband operators.

>Radio-control or "R/C" is the old "Class C" CB which still
>retains the old 27 MHz band frequencies and had the many 72 MHz
>channels added to please modelers, both contest flyers and the

>occasional "park flyer."

This is as close as you will come to being correct, Lennie, but STILL not "strictly" for recreational use. If I want to use one of these frequencies to remotely control a device for my business, I may do so.

>While there are no exact details,...

No problem, Lennie...lack of details seems to be your forte...especially when it "supports" your rants.

>While there are professional R/C users (I know of two of them here
>in the center of movie land) those are distinct rare cases.

Even ONE "case" mitigates your "strictly" assertion. I know of many others. That the rules ALLOW this again mitigates your "strictly" recreational assertion.

>The FCC worded the regulations so as not
>to discriminate between recreation and occupation or amateur and
>professional.

You're wasting a lot of bandwidth to say "Steve has my balls in a vise and I don't want to admit I am wrong".

>The FRS or Family Radio Service was created to give individuals a
>short-range communications radio capability that includes some
>measure of privacy. Again, the language of the regulations does not
>discriminate between recreation and occupation nor amateur and
>professional.

Thanks, Lennie. I knew I was right all along too.

>FRS transceivers on the market range from as low as $30 the pair
>to $80 for a single unit. No doubt some professionals use FRS
>transceivers for very low-cost operations,...(SNIP)

Which mitigates your "strcitly recreational" assertion for FRS. So far We have ruled out Class C and Class D CB as "strictly recreational" since there are glaring examples of those who DO use those services for OTHER than "recreational" purposes.

I also know of persons who obtained an Amateur Radio license because it furthered some other purpose (a friend and ardent storm chaser in Oklahoma is one...)...No 'recreational' intent was ever considered on his part.

That Amateur Radio may be used for NON-recreational purposes at any given moment is also further proof that your asertion is FALSE.

So now we have ruled out most of Part 95 and Part 97.

>... but Part 90, the HUGE
>350+ page Private Land Mobile Radio Services section
>has the following radio services for professionals in: (SNIP)

We can already rule those services out as "strictly recreational". Lennie. What was your point? (Other than to cover your bloody tracks?)

>Part 95 is specifically named PERSONAL Radio Services.
>Four out of the five radio services in there were specifically
>created for recreational radio use. To argue anything else is
>a stupid exercise akin to picking fly shit out of pepper.

No, they were NOT created for "recreational" purposes. They were created for PERSONAL uses, Ignorant One. ONE of the five parts (Class C) is the only one that comes close to matching your assertion, but even YOU cite "exceptions"...therefore it's STILL not "strictly" recreational.

If someone elects to use CB, FRS, GMRS or Class C Part 95 for "recreational" purposes, then that is a PERSONAL choice, but is NOT the ONLY (hence "stictly") one they may exercise.

In no radio service that you cite did the Federal Communications Commission EVER create for "strictly" recreational purposes.

>CQ publishes the complete 22-year content of HR on
>three CD-ROMs, available from them directly or through the ARRL
>(shipping extra from ARRL) for only $150.

If you care to add this to your "library" for nostalgic purposes and have the $150 in discretionary cash, have at it.

"Ham Radio" is no longer published. It failed...defunct...kaput. It's nice that some feel it necessary to "republish" it via CD. But I have no use for 20 year old data...Not at $150, anyway. If I get refered to "HR" as a resource, I will pick up a copy at the next hamfest for 25 cents a copy.

>NSI and KCI are no longer.

And the relevence of this relative to your inability to provide a specific regulatory cite as to which radio service is "strictly recreational" would be...?!?!

More smoke and mirrors, Lennie...But you still have not identified the allegedly "strictly" recreational radio service.

Keep trying. You used 6385 bytes on this pass...Wanna try for more?

>I spent four months total in five trips to Naval Air Development
>Center in Warminster, PA, in 1971-1972, while working for
>RCA Corporation.

Another trip down CV lane...another dissertation created to marvel at his self-appreciating "career", his presence long forgotten (and in some cases gladly) by all but himself.

And another example that in his 15 years of night school, very little, if any, was spent in Composition or Professional Writing.

Just how many words CAN you pack into one "paragraph", Lennie? At least words that MEAN anything?

>Whatever became of the Warminster NAS or the old
>NADC buildings is not important to me personally since I never
>went back there again, not the nearby Willow Grove NAS, nor...(SNIP)

Of course it's not important to you, Lennie...because that rambling, meaninless trip down Lennie's Nostalgia Lane was NOT germane to the conversation.

You try to make some "point" by discussing things that ALLEGEDLY happened in 1972 when I have clearly stated my presence was a decade later, assuming, I suppose, that you think Pennsylvania simply ceased to stop dead in it's tracks when you left.

How pompus.

>What STEVIE has to supply is the year where he "visited the
>HRO" outlet I described in Burbank, CA.

January 2000, Lennie. Sorry.

>There
>are apparent differences in geographic locations which should
>be easily recalled.

I was more interested in the company and conversation than taking in geographical points of interest so I could do USENET jousting with Your Loserness. But "been there-done that" still applies.

And the traffic and air in SoCal still sucks.

Now...WHICH RADIO SERVICE IS STRICTLY RECREATIONAL..???

Steve

> All of the above is true and has been posted by me several times.

Of course, you neglected to repost the untrue part. Here it is again:

> So the creation of medical code waivers and the dropping of the code test
> from the Tech license brought about just 4% more growth in a decade.

"Creation of medical code waivers and the dropping of the code test" did
NOT bring about "just 4% more growth in a decade". There were many
other factors that you deliberately failed to consider. Since the nocode
techs increased from zero percent of the ARS to 30% in that decade, your
conclusion is ridiculous and irrational. The lack of correlation between
the 30% of all members of the ARS becoming nocode techs and the 4% rate of
growth is obvious. Contrary to what you are trying to imply, the nocode
techs certainly contributed their share to growth. It was all the other
classes of licenses that were approximately flat growth for that decade
and failed to match the previous decade. Your feeble attempt to minimize
the contribution of the nocode techs to the ham population is pretty
transparent.

Following provided by WA2MOE

February 30, 1998
FCC Enacts Internet Morse Code Requirement

D.A.P. INDEXES:
TOP STORIES | NEWS | SPORTS | BUSINESS | TECHNOLOGY | ENTERTAINMENT

Filed at 10:26 a.m. EST By The Disassociated Press WASHINGTON (DAP)

The FCC, under pressure to clean up the Internet, especially after the Communications Decency Act provisions regarding Internet content regulation were stricken as violating the U.S. Constitution, has decided instead to require a Morse code requirement for Internet users. Citing the success of the Amateur Radio Service and the general belief that its requirement for operators to pass a Morse code proficiency exam and other technical requirements, has kept the A.R.S. "clean", the FCC will enact a 5 word-per-minute requirement for all Internet users. They are leaving open the issue of whether there should be a "codeless" class of Internet user and are soliciting comments on this proposal. Codeless class users could read but not write to newsgroups.

Persons wishing to develop a web site having only links to other web sites having links to other web sites, and so forth, must pass a 13 word-per-minute test and demonstrate proficiency in HTML, the Internet authoring language.

Persons wishing to develop web sites that have actual content, as compared to just links to other web sites, must pass a 20 word-per-minute Morse proficiency test, demonstrate proficiency in HTML and the Java programming language, and show that they have mastery of at least one human language, such as English.

The FCC, which lacks budgetary authority to implement the testing program, has stated that it intends to create Volunteer Examiner programs for Internet applicants. Whiskey Five Why Eye will mail your application to the FCC for a fee of $500.00.

The growth in the '80s (all US hams code tested) was 30%

True or false?

The growth in the '90s (some US hams not codetested) was 34%

True or false?

The difference is 4%

True or false?

>Nocode techs grew to be 30% of the ARS in the first decade.

There is no license class called "nocode tech". However, Technicians
amounted to about 30% of the total number of US hams at the end of 2000.

>Jim would like
>for us to believe that is a 4% contribution.

Nope. You misinterpret what was written. Try reading what I wrote, not what you

think I wrote.

This statement does an injustice to 30% of US hams. It is straight
out of the PCTA Handbook. Techs were responsible for about 30% growth
in the ARS during that decade. All other classes of licenses only
managed an anemic 4% growth.

>
> How is that not true?

It is obviously not true. Techs accounted for 30% of the growth in the ARS
during the 90's. All other classes of licenses combined were responsible
for that 4% that you attribute to the Techs. You seem to have interpreted
everything backwards and upside down.

> >There were many
> >other factors that you deliberately failed to consider.
>
> I was simplifying the model for you, Cecil.

Why would you choose to simplify it to the point of being ridiculous?

> >Since the nocode
> >techs increased from zero percent of the ARS to 30% in that decade, your
> >conclusion is ridiculous and irrational.
>
> How so? What growth numbers would you have us use? Show your work.

I'm using your numbers against you, Jim. The techs blessed the ARS with
30% growth during the 90's. You want to relegate them to 4%. Not nice.

> >The lack of correlation between
> >the 30% of all members of the ARS becoming nocode techs and the 4% rate of
> >growth is obvious.
>
> How so? Because it doesn't fit your agenda?

No because it is obvious. If you cannot see it, you are deluding yourself.

> > Your feeble attempt to minimize
> >the contribution of the nocode techs to the ham population is pretty
> >transparent.

> I'm simply stating facts, Cecil.

No, you are not "simply stating facts", Jim. You are interpreting facts
in an irrational manner. There is just as much evidence that all licenses

classes besides technician simply gave up on ham radio.

One of my sons is reluctant to produce any good school work, and has turned into a frightful headache for the family's, despite being very intelligent and creative, and a good reader too.
I've tried other alternatives, with psychologists, and psychopedagoges, even private teachers, but nothing seems to work.
Please, has anyone a suggestion to make?

Annie .

Hello Glendale Jim, Larry rides around conducting his own unannounced "Communications Emergency Tests." He gets better responses by discussing traffic, so thats what he does. He's responsible for engaging truckers with comments such as "Did you see that knuckle dragging Tech with the Southern Drawl cut across 3 lanes of traffic?" and his all time favorite, "Did you see the Kazoos on that Gal with the xx5TIT plates?"

Brian

What does CW have to do with this thread? Did you read that the SSB signal was too strong for the local oscillator? KG6AAY was set up for SSB, AM (I think, but who would us it?), CW, and RTTY. Three operating stations within the shack. I could be wrong, but you sound like someone who doesn't want to have to learn something to get a license. Pray tell, what is your call?

"Valentine Germann" <vgermann@socket.net> wrote

> Folks, this kind of thing has GOT TO STOP. It is the year 2002 and NO ONE
> wants to be identified FIRST as an "amateur."

Val,

I belong to a group called "Society for Amateur Scientists". We're pretty damned proud of the word "Amateur" in our name.

Our Mission

The Society for Amateur Scientists, a unique collaboration between world-class professionals and citizen scientists, is dedicated to the proposition that making discoveries is the birthright of all free people. We remove the roadblocks that prevent ordinary people from participating in scientific adventures of all kinds. Now you are limited only by your own intelligence, drive, and ambition.

Our members include people with no technical training whatsoever all the way to people with Ph.D.s in one field who want to explore fields outside their training. Our aim is to get everyone involved to the limits of their own desire; from tinkering in their own garage to working on stimulating projects on the front lines of science regardless of age, ethnicity or background.

We are the world's premiere support organization for amateur scientists. We define "amateur" to mean anyone who wants to do science simply for the pleasure of finding things out.

Interestingly, among our membership there are numerous amateur astronomers as well as numerous amateur radio enthusiasts. Among our leading 'sponsors' are Marshall Electronics and Edmund Scientific.

At SAS we have our own version of the "Big Project". We recently announced the creation of our "STAR" program. The idea was pioneered by a chapter in Connecticut (just coincidentally the HQ of ARRL) who built an observatory on a high school campus. The idea has "gone national" as the STAR program. SAS National intends to raise $50,000 this year to support one full-time employee who will work with our members and other community activists to build an observatory at a high school in their own school districts. The National office will act as facilitators-- developing the necessary written materials, observatory plans, etc. and helping each local team of activists to carry the project forwards. We will help these teams sell the vision of the program to their city officials, community leaders and local business professionals. The teams will then secure the necessary local support and raise the money for their own observatories from their own communities, just

as WCCSAS did. And SAS will work with them to help oversee the construction.

The project's long-term goal is to put one telescope into each school district in the country. A tall order! But to get started, have there is a more modest goal of completing two observatories in the next 24 months. As the program grows, SAS will seek additional funds to hire more staff to accelerate the pace.

Now doesn't that sound almost like a clone of the ARRL "Big Project"?

Now then Val, do you think SAS is doing this to have more "influence" in Washington or other hidden motives, a goal you berate ARRL for having, or could our goal (and the ARRL goal) be simply to help improve science education in America?

Should SAS abandon our "Big Project" and use the money to design and print some attractive brochures instead?

With all kind wishes,

de Hans, K0HB

PS: Our logo is really ugly also, with the word "Amateur" very prominent. Ain't it just awful!

Don't pay any attention to him, Jim. He and Carl Stevenson made a lifetime career of complaining about the code test, now they find time hanging heavy on their hands and need to keep it going for something (anything) to do. No longer do they have that mean ol' code test hanging over their heads, like a guillotine. I guess the strain relief was just too much for them.

Hans, you have hit upon something interesting here. Amateur astronomer. Similar to amateur radio, they have their publications. Most interesting ... Unless you are happy with a 1 1/2 inch reflector clamped to a folding chair looking forever at the moon, Jupiter, or Saturn, you are - if you wish to enjoy your hobby - going to have to learn a few things along the way. My guess is the average amateur astronomer knows more about time - standard, daylight savings, universal, and sidereal than the average amateur (DXers likely excepted - if you leave out sidereal. Oh, and the EME gang.) Amateur astronomers will understand elevation, right ascension, optics ... They will know constellations. What does the average ham know? The gazinta for the antenna? The gazotta from the radio? Operate all knobs to the right? I am not in favor of forcing CW on folks; however, what knowlege should one have to obtain an amateur radio license? Frankly, amateur astronomer - to me, at least - implies one more involved in astronomy and its' various aspects than amateur radio operator implies involvement in anything much beyond where to press the PTT button or (maybe with help) how to set up a vox. Maybe I'm nuts, but ... a lot of your recommended Q signals could be replaced by a simple ZBM-2 ...

Jim,

With all due regard, I think you're hanging around the wrong kind of
hams. Get away from the 2M repeaters, and join YCCC, FRC, PRC,
or one of the other east coast radiosport clubs. You'll think you were
back at AAY, or a MARC meeting down at the Agana Heights
clubhouse.

Actually, I probably owe him an apology. As I read other threads, it
appears he is simply chiding folks over their belief in the necessity
of Morse. In that vein, I would agree with him. My only problem is
just what knowlege should an individual possess in order to obtain an
amateur license? I am truely dismayed by the almost total lack of
understanding that many folks possess. I am not talking necessarily
about the newly licensed amateur; rather, I refer to those folks that
have been licensed 10 years or more. Certainly, if my neighbor were to
hold a ticket that entitled him or her to transmit at the 1.5 KW level,
I would hope they wouldn't point the darn thing at my bedroom at night
on 10 meters at full power ....

>aptitude and physical attributes necessary for flying.

That's right, Lennie -- but how many military or commercial pilots do you know that aren't college graduates? Years ago, I heard an Air Force general officer speaking on the concept of enlisted pilots. He agreed with a commentor that it doesn't require a college degree to learn how to fly an airplane, even a complicated Air Force jet fighter -- but that he wasn't going to bother trying to train anyone to do so unless they *had* a college degree -- only because that is the one way to be sure that that person is worth making the multi-million dollar investment in his/her training.

>DESIGNING a commercial air carrier requires knowledge and skill
>of highly technical intellectual matters with basic engineering best
>obtained through an accredited educational institution leading to a

>>the easiest Ph.D for me to get would be in Education! I could
>>probably knock off an MSED with as little as another year's worth of
>>night school courses!
>
>Yawn...here come da Soma Come Loud stuff again.

I think I'm starting to get a whiff of your problem here, Lennie. Are you jealous of the fact that I'm an Honors Graduate? Or are you just annoyed that I had the initiative, motivation, and desire to

become one, the same why I became an Amateur Extra under the
Pre-Restructuring licensing standards?

>>So, you're absolutely right -- I am not "using" my degree, in the
>>sense that I'm not making my living working as an HR specialist.
>
>Cut the BS on fancy names. "HR" as in Human Resources is still
>PERSONNEL. "Paratransit operators" are BUS DRIVERS.

Correct on both counts, Lennie. I am a BUS DRIVER. A lot of
college graduates are TRUCK DRIVERS, TUGBOAT CAPTAINS,
AIRLINE PILOTS, CHEFS, MUSICIANS, PHOTOGRAPHERS,
LIMOUSINE DRIVERS, 7-11 OWNERS, HOTEL CLERKS, HAM
RADIO STORE SALESMEN, AUTOMOBILE DEALERS, and a lot
of other occupations you can spell out in upper-case letters -- in
addition to doctors, lawyers, engineers, and educators. Don't look
now, but I'm sure you can even find the occasional college graduate
flipping burgers at McDonalds or delivering Domino's Pizza! Go
ahead, Lennie -- make all the fun you want at the occupational
choices of each and every college graduate who is not directly
employed in the field of their major course of study. If fact, why
don't you write a "My Turn" column for Newsweek, railing on the
fact that there are so many of us college grads out there who are
employed in such a manner?

>Not a damn thing wrong with using the conventional titles. Everybody
>knows what they do, are whether they have fancy titles or not.

It just so happens that the term "Paratransit Operator" accurately
defines my particular job -- since it involves a lot more than merely
steering a bus around a pre-determined route between bus stops.
I have to provide door-to-door service to physically and mentally
challenged persons, maintain an extremely tight schedule, and
ensure the safe operation of my vehicle under far more challenging
circumstances than those experienced by fixed-route operators.
It is different from fixed-route operation, has much greater
responsibility, and pays significantly more as a result. And, no, it
certainly doesn't require a college degree, but we have a number
of college graduates doing it! So, please, continue in your jeremiad
about how I'm not "using" my college degree.

>>Now -- please tell me how this makes me an inferior person?
>
>"HR" in this newsgroup is Ham Radio.
>
>You keep demanding that others "be as good as you" in all the
>BS about "applying yourself" and showing "dedication and
>motive" and such. You've bragged all over this newsgroup on

>
>What a huge, huge waste of ham radio.

Well, Kim, all I can say is that there's nothing new about you being
wrong about something! For you to say this only verifies the fact
that you're not qualified to make such judgements!

>There are broadcast stations all over
>the place, with helicopters, motorists who call in on cellular phones, etc.,
>to do the job you describe above.

Sure, but why should amateur radio operators not use the direct
communications capabilities they possess to perform the same service
to other hams? Where's the beef?

>Ham radio is more aptly used to report
>directly to the police items such as accidents, and even to assist motorists
>with getting roadside help.

Oh, now I get it. Unless we're being Ham Heroes™, then we're supposed
to maintain the usual radio silence characteristic of most repeater
systems.

>But, to have hams as a major contributor to
>traffic reporting is just not good use of spectrum.

Sez someone who is not qualified to make that judgement. Fortunately,
others, who *are* qualified to make that judgement, disagree totally
with your notions of this being a "waste" of spectrum. Don't look now,
but you're outvoted by a factor of everybody else-to-one (you). But
please, don't bother admitting you're wrong -- I wouldn't want anyone
to have a heart attack!

>> Considering the great
>> emphasis placed on public service in the ARS, I think we're missing
>> out on a golden opportunity to serve in such a capacity.

>The emphasis on public service in ham radio is specifically to fill a void
>for our public service agencies and volunteer groups--*NOT* to provide
>competition for already-in-use commercial ventures of broadcast radio
>stations!

You may have a point, were such competition actually occurring. However,
communications between amateur radio operators do not compete with
any other commercial or non-commercial services, and can actually
provide more timely and accurate information than is available in the
mass media.

>> Exactly, but this example doesn't relate too well to the issue of
>professional
>> drivers using amateur radio to give and receive traffic information,

>Ed Hare, W1RFI

Ed:

Well, I've been looking, both now and for years, and I haven't *seen* any ARRL PSA's since perhaps the late '80's, when I was stationed in Germany. There, all the "commercials" on AFN-TV were PSA's, including, occasionally, the ARRL PSA with Dick Van Dyke. Has the ARRL produced any PSA's within the last 15 years or so, and if so, where have they been televised? Certainly not in Plattsburgh, NY, Colorado Springs, CO, or the Philadelphia area (where all our TV programming comes from here in Central Delaware). Those are the stateside TV "markets" I've lived in since becoming a ham, and I've not seen any ARRL PSA's in any of them.

Brian:

Don't look now, but ham radio has been going downhill a lot longer than 12 years. Most "old timers" refer to the '50's and '60's as the "Golden Era" of amateur radio, and from all accounts, they were right. It was in the late '60's when they started playing with the licensing requirements, and Incentive Licensing, which was botched by the ARRL by not making adequate grandfathering provisions, began the NCTA and the ultimate Balkanization of the ARS we experience now. As to when ham radio is going to "crash," I'd say that's pretty much already happened, as of 4/15/2000 with the announcement of "Restructuring."

Naw, I'm not on 2. I'm on 440, and it would have done your heart a wee bit o good to hear us one night when one guy was ranting about the necessity of keeping the code. All head full and damn the torpedoes .. 40 WPM F2 ahoy! That was fun ;) ... Heck, I spent some time at 'NAC as well (the hospital - as a ham, not a patient!). Ahhh ... Agana ... I forget what club it was, but they had a REAL pinball machine. The ancient type with fixed pins (nails?) and you had to try and see how far down the thing you could get the ball. Ho boy, and Old Swill (Old Milwaukee beer) had just been introduced to the em club. 5 cents got you a 16 ounce can of old swill. If you were broke, just borrow a quarter! I saw a short movie on Guam on the satellite. I wouldn't recognize it today for all the high-rise fancy hotels and such.

73 from Rochester, NY
Jim
ps - what was it, KUAM? The TV station where if they didn't get part two ahead of part three, they'd play part three of the movie one night followed by part two the next .... And the weather reports - if it was raining, you could hear the rain pounding on the quonset hut!

Larry, your jeremiad is not original. This same dismayed chant has
been going on for 90 years, ever since 1912 when Hiram Percy Maxim
was forced to give up his call, "SNY", move above 200 meters, and
knuckle under to government regulation including a (gasp) 5WPM
Morse test.

"Ain't it awful what they've done to us?" was the cry. But ham radio
went on and flourished.

Then in 1919 they raised the Morse test to 10WPM.

"Ain't it awful what they've done to us?" was the cry. But ham radio
went on and flourished.

Throughout the 20's CW gradually replaced King Spark, and spark was
eventually outlawed.

"Ain't it awful what they've done to us?" was the cry. But ham radio
went on and flourished.

In 1923 they introduced something called "Amateur Extra First Grade"
with special calls and privileges. The class was discontinued
when only 6 people applied in 1926.

"Ain't it awful what they've done to us?" was the cry. But ham radio
went on and flourished.

Then in 1927 they reduced the license classes from two to only one
class. Old "Second Grade" had to upgrade within one year, or go
QRT.

"Ain't it awful what they've done to us?" was the cry. But ham radio
went on and flourished.

In 1932 they changed it all again, dividing us up into Class A, B, and C, all with a 10WPM code test.

"Ain't it awful what they've done to us?" was the cry. But ham radio went on and flourished.

In 1936 they said there were too many new hams coming into the hobby, so they raised the Morse test speed to 13WPM.

"Ain't it awful what they've done to us?" was the cry. But ham radio went on and flourished.

In the early 50's they renamed everybody from A, B, or C to Advanced, General, or Conditional. They also introduced 3 new license classes called Novice, and Technician at 5WPM, and Extra at 20WPM.

"Ain't it awful what they've done to us?" was the cry. But ham radio went on and flourished.

In the late 60's they invented something called Incentive Licensing.

"Ain't it awful what they've done to us?" was the cry. But ham radio went on and flourished.

In 1976 they quit requiring us to certify we had been on the air for 12 hours last year (for renewal). They also ended the Conditional license.

"Ain't it awful what they've done to us?" was the cry. But ham radio went on and flourished.

In 1991 they removed the Morse requirement for VHF/UHF-only licensees.

"Ain't it awful what they've done to us?" was the cry. But ham radio went on and flourished.

In 2000 they changed Morse testing back to the 1912 requirement of 5WPM, and the number of classes to 3.

"Ain't it awful what they've done to us?" is the cry.

With all kind wishes,

de Hans, K0HB

I have to admit too Cecil, I'm disappointed in that post.

The reality of being an alcoholic...at least those that are
admited to be and have successfully taken the AA road
to sobriety is that they recognize and "admit" they ARE
an alcoholic...and always will be. My dad was just such
a person who happily had had some 40+ years of sobriety...
but he never stopped "admiting he was an alcoholic."

Nuff said on that. Judge the person on what they are doing
now.

Cheers,
Bill K2UNK

> any of it's affiliates. Why waste my money?

Holy cow, Batman, there is trouble in River City for sure!

Anyone who has the money or adequate credit can stop in at HRO, AES, Radio City, any Radio Shack outlet, or one of dozens of other places and buy amateur radio transmitting equipment, with no background check or breathalyzer test of any kind!

Ain't it awful!

If they are bedridden, but can reach a telephone, these sickos can call one of a dozens of "1-800" numbers and place their order which will be delivered promptly.

Aint't it awful!

On their scanner they can clandestinely spy on swap nets to find equipment available for sale, or they can stop at the next swapfest/fleamarket/hamfest and purchase amateur equipment from any table, and take it home for their nefarious purposes with no waiting period,

Ain't it awful!

In years past we could buy amateur equipment at Sears (right alongside the Craftsman socket sets), or order it from their catalogs. Heath had stores all over the country. Anyone who had the money or credit could purchase amateur radio equipment from those folks. Here in my modest-sized Midwestern hometown we once had several retail outlets which handled amateur equipment along with other electronic equipment including consumer items such as televisions, record players, and even (gasp!) citizens band equipment.

It was TERRIBLE, I tell ya!

Even worse, some folks have been known to clandestinely acquire the bits and parts from infamous open markets such as "radio row" in New York and actually build their own equipment. Kids have been cannibalizing their Aunt Emma's old junked TV and doing the same thing, probably with unsterilized soldering irons!

Ohmygawd, how awful!

I have heard that there is a network of deviants who use the codename "Elmer" who are trying to lure unlicensed youth with promises of help building their own station. I've heard even the Scouting programs give radio badges to unlicensed children if they show an interest in mystery codes.

This is clearly an affront to the sanctity of youth, the Boy Scouts, and probably the Constitution!

And all this has been going on right under our noses for about 90 years! It's gonna ruin the hobby if we don't clamp down right now! We must remove this temptation from the general public. We need new laws, including a waiting period to check out the background of persons who seek to buy a handheld weapon..... errr.... I mean handheld radio. Authorities must be consulted to make sure that prospective purchasers know all the right secret handshakes and belong to all the right clubs and societies. Especially we must take steps to ensure that the general public is not subjected to the sight of amateur equipment out in plain view of children and the infirm and elderly who might inadvertently become interested in becoming hams. It must be HIDDEN from public view and sold only in regulated stores on the back streets of distant and obscure cities like Watertown, South Dakota. We must hire FCC guards to ensure that you don't get in the store without the proper credentials.

What a lot of hooey!

Amateur Radio is not a controlled substance!

With all kind wishes,

de Hans, K0HB

The semaphore and morse signal lamp communications falls
under the rating of Signalman. The skill set of reading
signal lamp code by eye-sight (Signalman) is significantly different
than copying morse code by ear (was the Radioman rating)

Let's be careful as to how strong that NO is.

If the ONLY people knowledgeable as to the coding
or encryption technique or encryption scheme is a
limited (i.e. non-pulic, unpublished set) of people
or hams, then Larry is correct. IF, on the other hand,
a public, common or published scheme is used which
others can freely "decode/decrypt", then it is OK.

I think that covers it. By example, PSK31, ASCII,
EBCDIC are some common coding techniques for
character encoding/decoding.

Cheers,
Bill K2UNK

Picture "Dr Dre" with an HT. May not be so absurd, he could get
some of the kids in the 'hood into radio and electronics, and may
lead to them to college and to good jobs, and such.... Of
course they would have to put in the required work and effort,
but if you get them to want to do it....

The gall bladder ailments QSOs and such are just the old timers exchanging
physcologal support with each other. Seems as valid use of radio as say
contests and such. Sure it's boring to listen to if you're
young, but they're not "broadcasting" to you. There's other QSOs going on
to listen to, or call CQ and start a topic with someone.

units all over town gathering info and reporting back via ham radio
to a broadcast station, that would be illegal. And this rule (pecuniary
interest) is there really to protect our bands from being invaded
by business users. We'd be crowded off 2 meters otherwise.

I suppose a broadcast station could have a scanner easdropping on
ham repeaters to learn about traffic problems. The hams wouldn't
even know if that happened.

Larry, could you make use of a ham radio for traffic reports when driving your bus? I suspect your employer might not like it, but the FCC wouldn't care. Issue being a distraction while driving.

So you might as well study up and take the general written at the same
VE session as the code test. If you pass the written, that "locks it in"
for as long as you keep your license renewed. And you get more
spectra to operate in.

Jeez..... c'mon.... the way I see it you have to use RF to practically kill someone before the FCC would even notice. Does anyone have any experience that shows the FCC is active in enforcement? I could be wrong, but they seem under-manned ant not very empowered to provide oversight and regulation.

1295. Repeater Information

Newsgroup: rec.radio.amateur.policy
Date: 2002-04-12 09:44:10 UTC
From: Lars121 <lars121@pacbell.net>
Message-ID: <J%xt8.3815$lp4.1966648561@newssvr14.news.prodigy.com>
Source record: 40564

I'm a little confused and I'm hoping someone can help me figure this out. There are websites who list repeaters that are in operation. But, the location of the repeater does not match what is on the FCC license. If this is permitted, is it possible to find a physical address of the repeater? Who is accountable for the physical address if the FCC is not?
An example is given below and can be found at websites like
www.220sma.org/smarpt.htm
http://www.qsl.net/cora/222_Mhz_Repeater_Guide.htm
http://www.geocities.com/CapeCanaveral/Hangar/6847/

Freq (MHz) - Call Sign Location of Repeater Hardware - Status Mode
224.840 - K6BWA HOLLYWOOD HILLS - PRIVATE
224.840 - KA6UFC SAND CANYON - PRIVATE
224.840 - KS6E SHERMAN OAKS - PRIVATE
224.840 - KS6K SILVERLAKE, L.A. - PRIVATE
224.840 - N6EHD ALTADENA - PRIVATE
224.840 - WA6MTM YORBA LINDA - PRIVATE
224.840 - WB6PRR ALTADENA - PRIVATE

FCC license information differs and is as follows:

Callsign - Licensee Name - City (according to FCC license)
K6BWA - SCHULMAN, JOSEPH H SANTA - CLARITA
N6EHD - SCHULMAN, DANNY I - LOS ANGELES
KA6UFC - SCHULMAN, BARBARA L - SANTA CLARITA
KS6K - LEIDNER, JOEL D - LOS ANGELES
KS6E - FREEDMAN, MARVIN - LOS ANGELES
WB6PRR - MANCINI, ROBERT F - ALTADENA

>in Germany.

Go to http://www.arrl.org and look at the media public relations web page. It will tell you some about the PSAs (though not quite enough for my taste).

When and how they get run is a local broadcasting decision, not an ARRL one. Is this important enough to you that you are willing to work with your local broadcasters to persuade them to air them?

These are the trustees of the repeaters. These people are responsible
for the FCC regulated operations of the repeaters. IOW, if something
goes wrong, or if the repeaters are not used according to Part 97, these
people are the ones that the FCC will contact 1st.

They do not have to be physically located at the same address.

>or others, wish to have such discussions on the air. I don't.

Either it's a violation of Part 97 or it isn't. If it's a violation, none of us
should tolerate it. If it's not a violation, of course you don't have to
participate in it.

But from other posts you have said that you chide, tease and make fun of other hams for doing so. That behavior contradicts your claim that you "don;t really care".

> For the
>reasons that a) I believe it *has the potential* for abuse (and is abused in
>my opnion)

Lots of things have the potential for abuse. How about SKYWARN? Or the typical honeydew conversation where one ham spouse asks the other to "pick up" (as in buy) certain items on the way home.

>and, b) it just sounds crappy when all people can do to drum up
>conversation about traffic, weather, and how sick they've been.

Why does that sort of thing "sound crappy" if it's what people are interested in at the time? What would you have hams talk about on the repeaters during drive time?

Some folks might even say that to chide, tease or make fun of other hams on the air sounds much more "crappy" than talking about traffic, the weather and health problems.

>> OK, consider this:
>>
>> Suppose a ham decides to put up a tower and a bunch of locals show up on

>Yeah, and I think those examples are reasonable.

I would say they are clear-cut.

> Asking for directions to a
>hamfest, a friend's house, a hotel, a restaurant, whatever, doesn't seem to
>get near anything questionable...again, in my opinion. But, if you have
>just gotten hired by the hotel, restaurant, whatever and you are asking
>directions to the place (say it's a chain and you've never been to the

>location you'll be working at), then to me you are violating the rules. If
>you're going to your friend's house to conduct some work you'll be getting
>paid for...well, ya shouldn't be using ham radio to enhance your ability to
>earn that money by asking for directions over ham radio.

So it's OK to talk about traffic on the way home but not on the way to work?

Sorry, that's not a reasonable interpretation. Interpreting the rules your way results in extreme limitations of what hams can talk about on the air. By your rules, Kim, ham spouses should not exchange "honeydew" lists on the air, because in doing so they may save money by reducing the amount of driving they have to do. That's pecuniary interest.

> Hamfests are
>another matter altogether. I *believe* the FCC has written opinion that
>selling radios/ham equipment is OK, as long as it's not your regular
>business.

But a hamfest may be the regular business of a club, and having a talk-in station
promotes that business. By your rules, talk-in stations for hamfests should not exist.

There are lots of other examples. Perhaps hams should not discuss the weather on the air because one of them may make a business decision based on that information. We should not discuss cars or home appliances on the air because other's experiences and advice may save one of us money.

The potential for abuse is staggering if we follow your interpretation.

It is also quite surreal to read your opinions about how innocuous and legal conversations "sound crappy" and "cheapen ham radio", but you think your choice of call sign does not have any negative effects on ham radio's image, despite many hams' opinions to the contrary.

>Heck, even cities allow a couple/few yardsales a year without
>having to charge sales tax.

In all of the places I've been, sales tax is the province of the state, not the city.

All true and correct. The General written is just 35 multiple-choice questions and gets you lots more bands, modes and spectrum than a Tech-with-HF. And paying the VE fee gets you one try at it anyway.

And while you're at it, try the Extra written even if you haven't studied for it. It's good practice, costs nothing but your time and you might pass it. Back in the summer of '68, when I went to the FCC office to upgrade from Tech to General by passing the 13 wpm code test, the examiner said 'why not try the Advanced while you're here?" I hadn't studied for it at all but a 14 year old kid did not say no to The Man, so I took it - and passed easily. Same thing could happen to you.

>requirements,
>> and Incentive Licensing, which was botched by the ARRL by not
>> making adequate grandfathering provisions, began the NCTA and the
>> ultimate Balkanization of the ARS we experience now.

WHOA! Slow down a sec!

The whole license requirement mess began in 1958, when the FCC started to express
concern that hams were not keeping up technically and were deficient in operational
skills. (Sound familiar?) Of course in retrospect "Sputnik fever" may have had something to
do with it.

In 1963 the FCC asked for ideas and the ARRL made a very simple proposal: Reopen the Advanced
to newer hams and require Advanced or Extra for full HF phone privileges. Simple and easy. Too
simple for the FCC, who spent the next 5 years getting input from a variety of sources and coming up
with a very complex plan.

The grandfathering issue was not the ARRL's fault. FCC was specifically concerned about those hams

who were already licensed but who had not progressed beyond General or
Conditional. (Back then only
about 1 in 6 hams had an Advanced or Extra, and about one in 50 had an Extra).
FCC actually proposed
demoting Advanceds to General and creating a new "Amateur First Class" to
replace Advanced.

There was also the issue that if existing hams were "grandfathered" to full
privs, the newbies would complain
that they had to meet tougher requirements than the old hands. Not a good
thing, said the FCC.

If the job was botched, it was the FCC that did it.

>>As to when
>> ham radio is going to "crash," I'd say that's pretty much already
>> happened, as of 4/15/2000 with the announcement of "Restructuring."

Yes and no. FCC has made mistakes before.
>
>Larry, your jeremiad is not original. This same dismayed chant has
>been going on for 90 years, ever since 1912 when Hiram Percy Maxim

>Morse test.
>
Don;t forget the kilowatt input limitation.

>"Ain't it awful what they've done to us?" was the cry. But ham radio
>went on and flourished.
>
>Then in 1919 they raised the Morse test to 10WPM.

Also made the written tougher. I don't think they allowed renewal of prewar
licenses,
either.
>
>"Ain't it awful what they've done to us?" was the cry. But ham radio
>went on and flourished.
>
>Throughout the 20's CW gradually replaced King Spark, and spark was
>eventually outlawed.

1927 - after hams had abandoned it.
>
>"Ain't it awful what they've done to us?" was the cry. But ham radio
>went on and flourished.

>Then in 1927 they reduced the license classes from two to only one
>class. Old "Second Grade" had to upgrade within one year, or go
>QRT.
>
>"Ain't it awful what they've done to us?" was the cry. But ham radio

>went on and flourished.

In 1929 the bands were slashed, particularly the highly popular 40 and 20 meter bands.
(40 used to be 7000 to 8000 kc. and 20 was 14000 to 16000 kc.) Plus hams had to use
pure DC and have stable signals.

"Ain't it awful what they've done to us?" was the cry. But ham radio
went on and flourished. Between 1929 and 1935 the number of US hams almost tripled.
>
>In 1932 they changed it all again, dividing us up into Class A, B,
>and C, all with a 10WPM code test.

And if a Class C moved to within a certain distance of an FCC office, he/she had to be
retested within 90 days or lose the license.
>
>"Ain't it awful what they've done to us?" was the cry. But ham radio
>went on and flourished.
>
>In 1936 they said there were too many new hams coming into the
>hobby, so they raised the Morse test speed to 13WPM.

Too many hams coming in with too few skills and too little technical knowledge, and
then dropping out in a year or two. They also made the writtens tougher - again.
>
>"Ain't it awful what they've done to us?" was the cry. But ham radio
>went on and flourished.
>
>In the early 50's they renamed everybody from A, B, or C to
>Advanced, General, or Conditional. They also introduced 3
>new license classes called Novice, and Technician at 5WPM, and
>Extra at 20WPM.

And announced that in a year they would no longer issue new Advanceds. Plus ful privs were reserved for Advanceds and Extras.
>
>"Ain't it awful what they've done to us?" was the cry. But ham radio
>went on and flourished.

Then in late 1952 the FCC trashed the system they had just introduced, and
gave all hams except Novices and Techs full operating privileges.

"Ain't it awful what they've done to us?" was the cry. But ham radio
went on and flourished.
>
>In the late 60's they invented something called Incentive Licensing.
>

>"Ain't it awful what they've done to us?" was the cry. But ham radio

Same number of classes as a half-century earlier.
>
>"Ain't it awful what they've done to us?" is the cry.

Everything old is new again.

--

I really do think ARRL is missing a gold mine by not publishing a collection of
"Rotten Radio" stories. Most of them are still relevant today.

In a word: WHY? Why is it a "huge, huge waste" for hams to help each other
by discussing traffic conditions?

>There are broadcast stations all over
>the place, with helicopters, motorists who call in on cellular phones, etc.,
>to do the job you describe above.

Here in the Philadelphia area, most of the broadcast stations carry traffic
reports.
At least one station has an all-news/weather/traffic format, and enjoys the
highest
ratings of any BC radio station in the Philly market.

But the traffic info carried on such stations is of very limited use, in my
experience. First off, it's usually "stale", because of the time delays between
a traffic delay and the report of same actually being aired. Second, the
traffic reports must cover a huge area, so you have to listen to all sorts of
stuff to find out conditions in your area. Third, only the biggest delays are
usually reported, due to time limitations.

End result is that very often the delays you encounter are not reported in time
for you to avoid them, and the delays you do hear are cleared up by the time
you get to there.

Direct amateur communications via drivetime repeater roundtables are much more
effective. The coverage area is limited, compared to the BC stations, and
reporting is real-time. Nobody gets paid to make the reports, so it isn't a

pecuniary interest thing.

>Ham radio is more aptly used to report
>directly to the police items such as accidents, and even to assist motorists
>with getting roadside help.

Why isn't that a "huge, huge waste of ham radio", Kim? There are cellphone
towers all over the place now in most major metro areas and along most major
roads. There are far more cellphone-equipped cars than hams. Calling 911
or AAA is a free call for most cellphone users.

>But, to have hams as a major contributor to
>traffic reporting is just not good use of spectrum.

Good thing the FCC disagrees.
>

>be called into question on the rules. As I said, have at it...but I won't
>be involved in the discussions, nor will I answer those questions if I feel
>you're asking for those reasons...

Fine - you don't have to. But to chide, tease and make fun of hams for doing so
is another matter.

There is also the matter of saving fuel and reducing pollution by avoiding
unnecessary delays. This is clearly a benefit to society - a public service.
It fits in perfectly with the basis and purpose of the ARS.

Correct. Even a tech, if operating within the confines
of the tech's permitted frequencies and modes doesn't need
a control op.

There is no *requirement* to work or expend effort, i.e.
someone who already knows the material is not required
to work or expend effort to learn something else that
he/she doesn't know.

Dick, I'll say it as follows:

The aspect of "work" is not and should not be any
consideration as to the rational behind any specific ham
license requirement. We all know that for most people,
work (effort) will need to be expended to achieve
or pass a particular license requirement...BUT, that
having been said, the NEED or DESIRE to try and
make "work" be an aspect of licensing is, again, not
a factor nor should it be.

Cheers,
Bill K2UNK

Additionally, we would run a morning traffic net type
operation three times an hour (on the hour, 20 minutes past
and 40 minutes past). One ham would serve as net control
and the exchanges then took on the operational aspects of
a true net. EVERYONE was encouraged to run a net.
Bottom line of that scenario is individual training on net
operations which benefits all of us in the eventual case
of an emergency net operation being needed.

Also, the traffic chopper doesn't usually stay in one area.
We'd get much more detailed info from other hams about
real-time traffic conditions because they were right there.

Additional well reasoned comments from Jim
deleted for brevity.

Cheers,
Bill K2UNK

Bzzzzzzzzzzzzzt! Bad answer.

"97.7 Control operator required

When transmitting, each amateur station must have a control operator."

Good luck on this on now!

>It is obviously not true.

In other words, you cannot refute it with facts so you simply say it's not true and we are supposed to take that on faith. (Somebody get the net!)

>Techs accounted for 30% of the growth in the ARS
>during the 90's.

No, they did not.

There was 34% growth in the 1990s.

30% of 34% growth is 10.2%. "30% of" means "multiply by .30".

So you are saying that Techs caused 10.2% growth and all the other classes caused 23.8% growth. Total is 34% growth.

>All other classes of licenses combined were responsible
>for that 4% that you attribute to the Techs.

You just contradicted yourself twice. First you tell us that Techs were responsible for 30% of the growth, leaving most of the growth to the other classes, then you say that the other classes only contributed 4%.

Better take some remedial math classes, Cecil.

And show us your work if you want to be taken seriously.

>You seem to have interpreted
>everything backwards and upside down.

The only possible mistake I have made is thinking you might actually be serious about any of this. Of course I know better, and am merely posting here to point out the absurdity of your claims and analysis. I'm being your straight man, so to speak, because you've told us many times you never post seriously here.

>N2EY wrote:
>> True or false?
>
>Why do you keep posting stuff with which I have no disagreement
>and ignoring the stuff with which I disagree?

I'm simply pointing out the facts, Cecil. Ham radio in the US grew 30% in the 1980s and 34% in the 1990s. In the '80s all US hams were code tested and in the '90s there was a new license class that permitted a ham license with no code test, AND, medical waivers of the 13 and 20 wpm code tests for those with a letter from a doctor.

The difference between 34 and 30 is 4. That means 4% more growth in the 1990s than in the 1980s. Simple.

Why do you keep editing out the facts and ignoring simple questions?

>Here's your statement with which I disagree:
>
>> So the creation of medical code waivers and the dropping of the code test
>> from the Tech license brought about just 4% more growth in a decade.

Is that not true? If it's not true, what part is false? It says "4% more growth in a decade" - did that not happen?
>
>This statement does an injustice to 30% of US hams.

How? It does not say WHO caused the growth. It simply says how much more growth occurred after certain changes were made. Nobody is blamed or credited, no license class is held up or put down.

All I did was write some simple, direct, true facts, yet you take offense to them for some reason. Seems like they don't support your agenda. Too bad.

>It is straight out of the PCTA Handbook.

I know of no such book. Do you know where I can get one?

Since my statement is true, if a "PCTA Handbook" exists, you're saying that it instructs people to tell the truth. Sounds like a good book to me.

>Techs were responsible for about 30% growth
>in the ARS during that decade.

Show your work. How many Techs were there in 1990? How many in 2000?
How much growth is that?

Besides, my statement does not say who is or is not responsible for the growth.

It's interesting that you have quietly backed away from "nocode Tech" and "coded hams".

I said it before, I'll say it again, SHEESH!

I for one respect the job of bus driver. You have lots of people you are responsible for every day. You perform a valuable service.

But the attitude of some here is hard to get happy about. One problem with so many here in the US anymore is that a fair number of people have no respect for so many jobs. There is dignity in all honest jobs.

Interestingly, those who don't share this belief, and like to rank jobs for their level in the food chain, seem to inevitably have the "proper job" cutoff point somewhere below their own vocation. 8^)

>paid for...well, ya shouldn't be using ham radio to enhance your ability to
>earn that money by asking for directions over ham radio. Hamfests are
>another matter altogether.

I think I understand where you're coming from, Kim. I think what you
say here says it best: ham radio shouldn't be used to *enhance* your
money making opportunities.

In your first case, where someone didn't know where they worked, and asked
directions, I disagree -- it doesn't enhance their opportunity to make
money. Yes, it might keep them from being late, but I don't really see
a problem with this. I don't feel it enhances the persons ability to make
money, not in a realistic sense.

In the second case, I can see that as less gray -- that seems akin to
setting up a work appointment using ham radio, which isn't gray at all,
it's simply not allowed.

I don't see a problem with talking about travel conditions on your route
to work. It certainly doesn't enhance my ability to make money -- I'm
not paid hourly.

On another, somewhat related note (at least I think it was in this thread)
you said something about how people discussing medical conditions *cheapens*
amateur radio. That's sounds amazingly like what Larry says about your
callsign. I don't agree with either one of you. I think listeners have
to understand that amateur radio is a way for people to talk. We have some
restrictions on what we're supposed to discuss and how we use our frequencies,
but still, most people just use it to talk. I don't care what people talk
about as long as its within the guidelines.

Sean.

Again you state the obvious and ignore the error. The "code waivers and
dropping of the code test" did not cause "just 4% more growth in a decade".
You are ignoring many other causes, possibly more important than those two.

> >This statement does an injustice to 30% of US hams.

>gladly) by all but himself.

Not a "curriculum vitae" (CV) "dissertation," just a demonstration of ordinary memory from 31 to 30 years past. It will be seen that the talibanian from tennessee has no long-term memory extending beyond 2 years.

> And another example that in his 15 years of night school, very little, if
>any, was spent in Composition or Professional Writing.

I took the normal English requirements for an EE major, got A+ in all of them (schools had not fully converted to numeric point scores at the time). No problem. One reason for my high-percentage acceptance as a freelance professional writer is the "composition" and neatness and format which are pleasing to editors.

Anyone can do that if they apply themselves and practice hard.

> Just how many words CAN you pack into one "paragraph", Lennie? At least

Some residents of Bucks County were of the opinion that that section of PA had already "stopped dead in its tracks" long before the 1970s...but that was locals talking. :-)

Much of what I've said about NADC is verifiable by printed documents
produced by the USN. None of it is "alleged." It is simply a straight-
forward recounting.

>>What STEVIE has to supply is the year where he "visited the
>>HRO" outlet I described in Burbank, CA.
>
> January 2000, Lennie. Sorry.

A mere 27 months ago and you cannot remember any details of
the store, its location, or the neighborhood? :-)

Not a problem for me...I can remember farther back than 31 years
and recall verifiable details. :-)

I call your bluff. Why in the world would you be traveling from
Tennessee to a single HRO in Burbank, CA, when they had
other stores in the southeast? A quick glance at their catalog
back pages shows one in Atlanta, GA, New Castle, DE, and
Woodbridge, VA. HRO has been on-line in the Internet for a long
while and has done mail-order for much longer.

>>There are apparent differences in geographic locations which should

>Loserness. But "been there-done that" still applies.
>
> And the traffic and air in SoCal still sucks.

I have no doubt that the talibanian from tennessee has been in *A*
HRO store. It is highly suspicious in this discussion since HRO is
a large chain and very far from the east coast (three of four eastern
HROs already mentioned). As a store it takes only a single space
in the small mini-mall. There is a Radio Shack in the other wing of
the mini-mall, same size as the HRO. In January of 2000 one of
the corners of that major intersection was undergoing a large
construction project, something any competent and observing driver
could not fail to notice; exit on Buena Vista to reach the freeway
on-ramp of I-5 would face that construction. Deconstruction on
the diagonally-opposite corner had just begun, also easily visible
from the HRO parking area (there is no "parking behind the store"
in that mini-mall).

There are two other major amateur radio stores in the Southern
California area comprising Greater Los Angeles. Each of those
have as much or more than HRO. Why were not those mentioned?
Hint: They also advertise in ham periodicals and on the Internet.

The traffic in the Greater Los Angeles area moves well except for
certain instances of accidents. The street and highway systems
here are large and long ago planned and built for much traffic. The
Air Quality Management District has made much progress in

improving air quality, so much so that the Los Angeles area hasn't been even close to the bad air of other areas for years. The month of January is particularly clean here.

Conclusion: The resident talibanian is simply bluffing. He got called and LOST.

> Now...WHICH RADIO SERVICE IS STRICTLY RECREATIONAL..???

That was already answered in another thread. Obviously the fist is still clenched inside the jar, no doubt the pain preventing full comprehension of the words written there. :-)

>
> "...group of universities."...??? I provide specifics and you claim
>it's incorrect and substitue a generalitiy. Uh huh...we believe you, Your
>Putziness.

From the Incidental Things Noted In Recent Past section of my memory, a group of colleges (from more than one university) were putting out an Internet notice on a meeting/seminar/symposium on geriatrics and disabilities. One of the disabilities concerned the possible use of morse code as a means of communicating with stroke victims. The URL was posted in here by Hans Brakob.
I linked to that notice, found nothing substantial to prove/disprove that particular means of communication.

In a subsequent message exchange between Brakob and myself plus a few others, I challenged anyone to demonstrate teaching any stroke victim anything with particular emphasis on morse code. No one had any distinct reply to my challenge, only the standard boilerplate jingoism about learning the code.

It seems that few in here have had any close family experiences with stroke victims or visited nursing homes caring for stroke victims.

>>TIA = Transient Ischemic Attack, also known as a "micro-stroke."
>
> NOT known as a "micro-stroke". Wrong again...Break open a medical
>terminology text, Your Clammyness.

My mother's MD broke open a medical text for me to show the terminology, effects, and general details. The text was one used at the USC School of Medicine. "TIA" and its colloquial "micro-stroke" is a common short-form descriptor used by doctors and staff at two hospitals in this area.

This isn't a medical newsgroup...it is about amateur radio.

Now, YOU break open a RADIO TEXT and LEARN.

>>There are various kinds of such "attacks," all caused by hemorrhages
>>of blood vessels in the brain.
>
> NOT "all caused by hemmorhages of blood vessles of the brain" , Lennie.
>Again you offer absolutes that are NOT substantiated by facts.

As I said before, this is an AMATEUR RADIO newsgroup.

I'm not a medical professional, I'm an electronic professional. I depend on medical professionals for the health and well-being of myself and my family. What I wrote in here was an almost verbatim description of the explanations given to me by MDs on each of three times my mother required hospitalization due to TIAs.

>>Doctors will explain all the details to patients' family members.
>
> Either the one who did the explaning to you did a poor job, or you
>weren't paying attention.

In that case, it is four graduate, licensed Medical Doctors who are "all wrong?" Three of them are still in practice in California, licensed by that state. One moved to Texas and is in practice there.

It is difficult to NOT PAY ATTENTION when looking at imagery from a computer-aided tomography machine (aka "cat-scan") where an MD is pointing to "probable" damage areas...especially when it is a close, blood relative.

What this has come down to is believability of the words of four graduate, licensed medical doctors versus an emotional nurse in another state who is not a medical doctor. The four MDs win, the nurse loses.

The nurse loses again on the "recreational" aspect of creation of certain personal radio services. The nurse is simply giving over to emotion and fighting-for-the-cause-of-fighting on picking nits over qualifiers. Logic and reason and history (Reports and Orders creating a radio service by the FCC) cannot dissuade the emotional so it is of no worth to continue that "argument." I won, but the nurse's fist is still clenched in the jar.

N2EY wrote:
> No, they did not.

Here's your posted ARS numbers (rounded).

Y2000 = 208k techs + 470k others = 678k total

You said: ARS grew by 34% from 1990 to 2000.
Therefore there were about 506k hams in 1990, all coded.

Based on your numbers, coded hams dropped from about
506k in 1990 to about 470k in 2000. That's about a
7% decline in others (coded hams). The techs had to
make up for that 7% decline. Techs actually
accounted for the 34% of growth plus 7% more.

To say that only 4% of the growth was caused by the code
waivers and the nocode license is just ridiculous.

What error? What part of the statement is in error?

"So the creation of medical code waivers and the dropping of the code test
from the Tech license brought about just 4% more growth in a decade."

Just exactly what in that statement is not true?

>The "code waivers and
>dropping of the code test" did not cause "just 4% more growth in a decade".
>You are ignoring many other causes, possibly more important than those two.

So the "4% more growth" part is agreed upon as true (34% - 30% = 4%), but you
think the code waivers and dropping of the code test for Tech were not totally
responsible for that "4% more growth". Interesting.

What other causes am I ignoring? Sunspot cycle, more buying power
equipment-wise, new modes like PSK31? If such causes are responsible for part
of that 4% increase, it means the code test stuff is even less important to
growth than I stated.

So what are the other causes and how much did they contribute?
>
>> >This statement does an injustice to 30% of US hams.
>>

All hams codetested and no waivers: 30% growth in 10 years
Some hams codetested and waivers: 34% growth in 10 years

Difference: 4%

> "Brought about" *means* "caused".

So? Rules changes are not people. And you have not explainmed how that true statement does anyone an injustice.

If anyone is doing an injustice to 30% of the US amateur population, Cecil, it's YOU. You keep harping on "coded" and "noncoded" hams as if there is some fundamental difference. To me they're all just hams. FCC agrees with me.

As I have said many times, all who meet the requirements and play by the rules are welcome. But you keep kicking up a fuss about some alleged difference, citing imaginary handbooks and doing really bad mathematical analysis of pretty simple stuff.

So tell us what those other causes of growth were....

Nice try at obfuscation, Jim. The 4% growth was not the only growth caused
by the addition of the Tech license. By your own posted figures, the Techs
were responsible for about 41% of the growth. The coded hams were responsible
for a decline of 7%.

> What other causes am I ignoring?

Whatever caused the decline in code tested hams. I don't know what that was
but it's obvious to the most casual observer that something drastic happened.

> All hams codetested and no waivers: 30% growth in 10 years
> Some hams codetested and waivers: 34% growth in 10 years

> it's YOU. You keep harping on "coded" and "noncoded" hams as if there is some
> fundamental difference. To me they're all just hams. FCC agrees with me.

Nice try at obfuscation, Jim. It is readily apparent that you want to ignore
the contribution of the Techs to the ham population. Won't work. Take away the
Techs and the ARS population would be in decline.

> So tell us what those other causes of growth were....

The Techs were responsible for about 41% of the growth. The code tested hams were responsible for a 7% decline according to your posted figures. No wonder you want to cover up the effect of the Techs by lumping them with the coded hams.

You think 200,000 Techs are a molehill? Shame on you, Hans. Techs are a
good 30% of the ARS mountain which is *NOT* a small percentage. Without
the Techs, the ARS population would be in decline.

Not at all a valid parallel since the reality of
knowing the oceans is certainly a basic building block
or foundation of knowledge related to seamanship. No one
MUST know morse code to be an outstanding or excellent
ham radio operator.

As an add-on comment, I have (as I'm sure Len and others have)
had the unfortunate opportunity to have to work with some
career engineers and/or scientists who couldn't write their
way out of a paper bag. They may have been brilliant in what
the could do...but articulating and conveying their ideas and
thoughts in an understandable fashion was severly lacking.

For what it's worth, the USAF has only one MOS that requires
morse code cognition and that one is "Signals Intelligence
Production" (morse training done at Fort Huachuca, the only
morse school in the US of A).

The US Army long ago eliminated horse cavalry even though
they had a horse-transportable radio set in 1932 and a horse-
mobile (operate while riding, try to do that with a morse key)
radio set in 1936. The USA was also big on carrier pigeon
use in the first world war; it was a part of the Signal Corps.
The Army Signal Corps collar insignia is a torch over crossed
signal flags from the visual semaphore signalling modes used
during the American Civil War and dropped some time around
World War One.

None of the US military service branches requires morse code
skills for transmitting any kind of information. They don't
NEED those skills but some amateurs still like to live in the
glorious past, full of legends and myths.

>way to be sure that that person is worth making the multi-million dollar
>investment in his/her training.

For half a century, the US military has had a policy of REQUIRING
commissioned officers to have a college education or the
equivalency of one. The USAF has made it a policy of requiring
all pilots to be commissioned officers. The US Army took a more
realistic view in the Warrant Officer requirements for helicopter
pilots (there are more helos in the US military than fixed-wing
aircraft).

>Don't look now, Lennie, but a Taco Hell doesn't necessarily qualify

>their high-level managers are high-school grads with a "C" average.

Taco Bell provides sustenance. In Los Angeles they have
consistently gotten an "A" rating, that rating required to be in
public view at all entrances.

>>Beautiful boilerplate pasties you made there, master chef!
>
>Thank you.

It was not a compliment. A "pasty" is both a kind of meat pie
and an appliance worn on the nipples of near-nude female
dancers. Your boilerplate jingoism in here jibes with the latter...

>I think I'm starting to get a whiff of your problem here, Lennie. Are
>you jealous of the fact that I'm an Honors Graduate?

Good grief, NO! All the pretty paper and high-sounding titles
don't mean squat when it comes to USING the alleged knowledge
and skills implied by engraved "sheepskin." You have to actually
DO something worthwhile to "prove your honors."

So far, LarrIE, all you've done is BS about your BS, transformed
BUS DRIVER to "paratransit specialist" in the weirdest bit of
buffoonery on titlemania I've seen in a long time.

As far as radio-electronics technical knowledge presented to the
world, you are a Technical Moron with PR Honors.

>Or are you
>just annoyed that I had the initiative, motivation, and desire to
>become one, the same why I became an Amateur Extra under the
>Pre-Restructuring licensing standards?

I give you credit for having passed a 20 WPM morse code test,
a skill which is of little, if any, use anyplace in the entire world of
radio except in amateur radio in the 1970s, the 1980s, the 1990s,
or the 2000s. Morse code skill counts for squat in knowledge of
radio technology. You can't even squat in that regard.

>Correct on both counts, Lennie. I am a BUS DRIVER.

Took you long enough to admit, ey?

>Don't look now, Lennie, but I've been involved in one form of
>transportation or another for my entire working life, civilian and
>military. You got something against people and things moving
>from point A to point B?

No, not even communications from "point A" to "point B." I'm
only against pretentiousness and puffery about some self-
styled "educated" individuals (such as yourself) adorning their
presences with all that patriotic bunting. When you have some
smarts in RADIO technology you come on back wtih all the
fancy and fanciful name titles and we can have more fun to
see how far up from the Technical Moron ("tm") level you've
come. Or not.

>>Now, WHAT HAVE YOU LEARNED ABOUT RADIO in all the time
>>you've been hitting on all those "dumbed down" no-code types?
>
>More than you'll ever know.

LarrIE, I fired up my first 1 KW HF transmitter in '53, went on to
work a number of different radio MOSs, had a long and successful
professional career in radio-electronics, was granted a patent in
radio technology, received reasonably large checks for work
performed, wrote accurate technical articles in radio-electronics
hobby and professional periodicals, have legally transmitted on
far more parts of the EM spectrum than allocated to US amateurs,
have worked in the broadcast, aviation, PLMRS civil radio services.
Yes, I acquired that degree along the way...LONG after being
assigned electronic design and development tasks by folks who
gave "passing grades in periodic tests" known as regular
paychecks...it sits in a box someplace.

You, on the other hand, have passed a 20 WPM code test and
had a number of amateur radio licenses (most granted by other
countries as a courtesy on the basis of passing a US test).
You've also gone at it with a lot of personal PR which amounts
to credentialist self-puffery in amateurism in various computer-
modem forums. I've never had a need to operate any radio
emitter in on-off keying morse modes for 49 years yet I once
"worked" a station ON the moon.

I've got sufficient confidence in my personal radio-electronics
abilities to take a box of electronic parts and decide whether or
not they are suitable for radio use...if so, how to make a radio
from them whether using tubes or semiconductors or both...
and then how to test it to see if it performs as designed...and to
analyze the results, determine if the design can be improved,
then implement that improvement. If necessary, I can go back
to basics and build the test equipment itself, calibrate it, and
prove the calibration. I learned that largely on my own and
claim no "titles" or "honors" or "awards" or other artificialities.

Operating a radio requires setting the controls to achieve the circuit then communicating information over that radio. I've already done that with TTY ("data"), voice (single channel, many modes), television, radar, radionavigation, both low-speed to high-speed digital data, narrow-band to wide-band FM multiple channel multiplex, telecommand, and some modes which are probably still classified.

You made a claim that "you know more than I (about learning radio technology)" and I say that you are just a Technical Moron in radio...but with "honors."

Let's see you PROVE all that "radio learning" to the group.

I haven't seen any sure-fire hints and kinks on getting all those public-service announcements actually broadcast.

>When and how they get run is a local broadcasting decision, not an ARRL one.
>Is this important enough to you that you are willing to work with your local
>broadcasters to persuade them to air them?

K6DUE (professional name Roy Neal) ought to have some sure-fire ideas. Under "Roy Neal" he was an on-air journalist for KNBC in Los Angeles for years. Saw him at work doing a video-audio recording for a live news spot at a science-fiction convention. See the regular Pasternak audio news bylines.

Just the same, I've never seen any ARRL videos in the Los Angeles broadcast service area (roughly 15 million viewers) when Roy was working for channel 4 and NBC. The last news item on amateur radio was a short news piece on KABC about six years ago...non-ARRL.

On the other hand, amateur astronomy organizations have annually gotten video and audio coverage here, both on broadcast and printed media.

I disagree. SPIN is absolutely necessary among some to
"prove a point" about the efficacy of morsemanship. SPIN
involves fancy mathematical footwork to "prove" something,
sort of like creative accounting. See the K3LT definitions on
why morsemanship is so necessary... :-)

The FCC has been deciding that since 1934.

The FCC's requirements keep changing but their licensing is
simply one of their "tools" in regulating civil radio services.

>I am truely dismayed by the almost total lack of

It will be of greater possible harm at 6 or 2 meters. That's why
there are limitations in the regulations on RF exposure.

I think it would be more accuarte to say that it "may"
be false. The truth is that we have no way of knowing
what, if any, contibution to the growth was the specific
result of the creation of code waivers and the dropping
of the code test...

The accurate statement (truth being the quality we
all want to agree on) would be...IMHO...as follows:

"So the creation of medical code waivers and the
dropping of the code test from the Tech license
were contributing factors, although unquantifiable
as to specifics, which brought about just 4% more
growth in a decade."

Cheers,
Bill K2UNK

Steve,

We've held a meeting, and decided that it was time the you to be fully
aware of your role in rrap. It goes like this:

Len Anderson is a senile organ grinder, playing a song called "No Code Mio".
You are the little monkey in a bright red hat indignantly hopping up and
down
and acting silly for our amusement.

With all kind wishes,

de Hans, K0HB

Wrong again, old sir.

US and other Allied naval forces use Morse code for tactical
signaling via flashing light.

With all kind wishes,

de Hans, K0HB

THAT'S it...You're not applying yourself or practicing hard...Thanks...

>Some residents of Bucks County were of the opinion that that
>section of PA had already "stopped dead in its tracks" long before
>the 1970s...but that was locals talking.

Too bad you weren't around in more contermporary times.

>A mere 27 months ago and you cannot remember any details of
>the store, its location, or the neighborhood?

For a place I was at for 30 minutes? And NOT on a sight-seeing trip..???
Puh-pleze.

>I call your bluff. Why in the world would you be traveling from
>Tennessee to a single HRO in Burbank, CA, when they had
>other stores in the southeast?.

What bluff, Lennie? I was visiting friends in CA who are LICENSED
Amateurs, which included a sidetrip to HRO. There's McDonald's about 3 minutes
from where I am sitting, but I ate at one in SoCal while I was there too. you
wanna "call my bluff" as to why I ate there too...?!?!

BWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

What a PUTZ!

>HRO has been on-line in the Internet for a long while and has done mail-order
for much longer.

You can't tweak the knobs over the Internet, Lennie.

>The traffic in the Greater Los Angeles area moves well except for
>certain instances of accidents.

BWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

"...certain instances of accidents..."...?

WAFJ!

>Conclusion: The resident talibanian is simply bluffing. He got
>called and LOST.

"got called and lost"...???

BWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!

Now...

WHICH RADIO SERVICE IS STRICTLY FOR RECREATIONAL USE?

>That was already answered in another thread. Obviously the fist is
>still clenched inside the jar, no doubt the pain preventing full
>comprehension of the words written there.

Uh huh....sure.....NOTHING has been answered. You have NOT answered a
direct question with a direct answer.

Because you got caught with your pants down...again...made ANOTHER
assertion that you cannot substantiate. Some would call the lying...some would
call if foolish. I think it's just plain stupid.

As if we were surprised.

>N2EY wrote:
>> No, they did not.

You completely removed the context. Here it is again:

(CAM previously wrote):

>>>Techs accounted for 30% of the growth in the ARS
>>>during the 90's.

(N2EY previously wrote):
>>No, they did not.

>>There was 34% growth in the 1990s.

>>30% of 34% growth is 10.2%. "30% of" means "multiply by .30".

>>So you are saying that Techs caused 10.2% growth and all the other classes
>>caused 23.8% growth. Total is 34% growth.
--
>
>Here's your posted ARS numbers (rounded).
>
>Y2000 = 208k techs + 470k others = 678k total

Been here before. Nobody denies those numbers.
>
>You said: ARS grew by 34% from 1990 to 2000.

Based on Jon Bloom's numbers, posted earlier.

>Therefore there were about 506k hams in 1990, all coded.

Been here before too. Nobody denies those numbers either.

>Based on your numbers, coded hams dropped from about
>506k in 1990 to about 470k in 2000. That's about a
>7% decline in others (coded hams).

Been here before, too. Nobody denies those numbers either. Why all
the fuss about "coded" vs. "noncoded" hams? They're all just hams. You
seem to be obsessed with making a distinction that most of us don't give
a dang about.

>The techs had to make up for that 7% decline.

Some Techs have passed code tests, though. Did you know that:

- from April 15 to December 2000, the FCC renewed 4553 Tech Pluses
as Techs (source: http://www.ah0a.org). That's about 535 per month.

- the FCC did not formally distinguish between Techs and Tech Pluses
until mid-July, 1994. They left it up to the individual ham to retain code
test documents.

>To say that only 4% of the growth was caused by the code
>waivers and the nocode license is just ridiculous.

Nobody has said that at all - except you.

What HAS been said is that the code waivers and dropping of the code test from
the Tech resulted in just 4% more growth in a decade. Not "4% of the growth"
but
"4% more growth".

But Bill Sohl has recently said it much better than I did:

"So the creation of medical code waivers and the dropping of the code test from
the Tech license were contributing factors, although unquantifiable as to
specifics, which brought about just 4% more growth in a decade."

What's not true in that statement?

>at the USC School of Medicine. "TIA" and its colloquial "micro-
>stroke" is a common short-form descriptor used by doctors and
>staff at two hospitals in this area.

It's not "microstroke", Lennie. You weren't paying attention.

>This isn't a medical newsgroup...it is about amateur radio.

Then why'd you bring it up?

>Now, YOU break open a RADIO TEXT and LEARN.

I do...a little bit, every day. I just don't have anything to prove by
INSISTING that everyone pay homage to it like you do.

>As I said before, this is an AMATEUR RADIO newsgroup.

Then why are YOU trying to tell me (erroneously, I might add...) the
pathology of a stroke in this same newsgroup, Lennie?

>I'm not a medical professional,...(SNIP)

That's obvious.

> I'm an electronic professional.

That's debatable. So far you can't tell me which radio service is
"strictly recreational", you YOU assert one exists.

>What I wrote in here was an almost
>verbatim description of the explanations given to me by MDs...(SNIP)

Which was almost as correct as your assertion that a "strictly
recreational" radio service exisits.

"Half correct" is NOT correct.

>In that case, it is four graduate, licensed Medical Doctors who are
>"all wrong?" Three of them are still in practice in California, licensed
>by that state. One moved to Texas and is in practice there.

I simply state that YOU do not understand what you were told.

>It is difficult to NOT PAY ATTENTION when looking at imagery from
>a computer-aided tomography machine (aka "cat-scan") where an
>MD is pointing to "probable" damage areas...especially when it is
>a close, blood relative.

I am sure it was terrible. But your "definitions" are not completely
correct. In other words, you only did HALF your homework.

>The nurse loses again on the "recreational" aspect of creation of
>certain personal radio services. The nurse is simply giving over to
>emotion and fighting-for-the-cause-of-fighting on picking nits over
>qualifiers.

Nope....YOU (an ALLEGED "radio professional") stated not once, but SEVERAL
times that certain radio services existed for "strictly" recrational purposes.

No such radio service exists...Not in the United States, any way.

>I won, but the nurse's fist is still clenched in the jar.

Won what, Lennie? You ahve yet to tell anyone which radio service is
"strictly" for recreational purposes. YOU said it exists. YOU have not said
which one it is.

And WHO is it that is always pontificating about imaginary "message point"
wins, Lennie? Seems you have AGAIN fallen to your own traps.

Sheesh....easier every day.

Steve

Been here before, too. Nobody denies those numbers either. Why all
the fuss about "coded" vs. "noncoded" hams?

You are the one who brought it up, Jim, in your false statement
about code waivers and nocode licenses accounting for 4% of the
growth. I certainly did not bring it up. The question is: Why are
code waivers and nocode licenses so important to you that you must
segregate ham radio into the code haves and the code have-nots?

> >To say that only 4% of the growth was caused by the code
> >waivers and the nocode license is just ridiculous.
>
> Nobody has said that at all - except you.

That's exactly what you said in your previous statement, Jim. I have reposted
it three or four times already. Do you deny saying what you said?

> What HAS been said is that the code waivers and dropping of the code test from
> the Tech resulted in just 4% more growth in a decade. Not "4% of the growth"

Give us an everloving break, Jim. "4% more growth" *IS* the top "4% of the growth".
It is certainly not 4% of the non-growth.

> But Bill Sohl has recently said it much better than I did:
>

That is *NOT* what you said! If you had said that, I wouldn't have blown a gasket.
You equated the code waivers and nocode license with exactly 4% of the growth.
Why you feel compelled to segregate ham radio into code haves and code have-nots
and give the code have-nots 4% credit for 41% growth is what I am objecting to.

I am saying that I read there are to be no communications in which we have pecuniary interest. I have heard OTs even say that means discussing things like stock--if they have a pecuniary interest. It is my nature, Bill, to err on the side of caution; not to test the waters. I'd just as soon not get involved with such discussions just as I would not get involved right now with, say, discussions that *could* be misconstrued to be in support of terrorism.
